THE agenda of NCI is elimination of code testing.
NCI has recently received member input asking
NCI to take a role in the ARRL petition and as a
result, NCI conducted a member survey. Subsequent to
that initial survey, NCVEC petition became known and
NCI conducted another survey on the ARRL vs NCVEC
differences.

> In addition, some prominent members are on record that they would never
> support reduction in the written qualifications, and now they do.

Neither ARRL nor NCVEC proposes any lowering of written
qualifications for General or Extra from what I have seen.

> If they were to have said "We are in favor of elimination of Element
> one and a reduction of qualifications for the licenses", I would have
> disagreed, but I can respect the position.

I don't understand the "reduction in qualifications" argument
you claim.

> But if the story keeps getting changed, both on a personal and group
> level, I am a little disappointed, and future assertions from them will
> have credibility in proportion.
> I doubt that they care what I think.

It is not about caring what you may think, but rather what
our (NCI) membership wants.

Cheers,
Bill K2UNK

Not entirely accurate... at least, not yet.

They have proposed rescinding the Part 97 rule which places a whole bunch of restrictions on the manufacture and sale of amplifiers which can be used between 24 MHz and 35 MHz (the 10- and 12-meter amateur bands, and the 11-meter CB band). This change has not actually been enacted - they're inviting comments on whether it's a Good Idea or a Bad Idea.

They have _not_ proposed making any change to the Part 95 rules, which currently make it illegal to actually _use_ any such amplifier with an 11-meter (CB) transmitter.

So - if their proposed rule change is adopted, it'll be easier for amateurs to buy amps that can be used on 10 and 12 meters. General-purpose HF-band amplifier designs will probably be revised, to "open them up" to the higher frequencies.

It will still remain illegal to use any such amplifier on the 11-meter CB band.

Whether this illegality will stop anyone... well, that's another question entirely!

IIRC, the accepted lower limit for electrocution is 24 volts. That is under some extraordinary conditions to be sure, but hey, don't misunderestimate (hehe) the ability of idiots! 8^) mebbe we better lower that 48 volt finals limit to 24 volts.

And of course, even lesser voltages van do lots of damage, like 5 volt power supplies for large computers. Come into contact with one of them with your wedding ring on, and you'll have to find a new finger to wear it on. Oh... the new ring that is.

These are the reasons that I really want to stress safety, as we remake the ARS. I'm capable of and willing to handle high voltages safely. If the tests are simplified badly, as it looks like will happen, there will be a new cadre of hams that may have little to no experience in these matters.

Maybe the ARS is going to do their own version of Fear Factor.....

I don't doubt that, Bill. But it is a change from what we've been told here.

Of course, you could argue that the petitions are related to the elimination of the code test, because it is one of the things being eliminated. But all the rest is tretching the purpose IMO.

Another thing is that So Many Times, we have been told about the difference between NCI policy and private opinion.

>>In addition, some prominent members are on record that they would never
>>support reduction in the written qualifications, and now they do.
>
>
> Neither ARRL nor NCVEC proposes any lowering of written

Explain in a manner that I won't bust a gut laughing how the upgrade of most amateurs from Technician to General is not a lowering of the written requirements.

You can certainly argue that the General test is not in itself reduced. But that won't matter, because at that time MOST General level hams will

not have taken the General test.

You can call it an adjustement. The adjustment is a lowering of the
level required to become a General.

A significant suspension of disbelief is required here.

Source record: 90984

"Bill Sohl" <billsohl@mindspring.com> wrote

| Neither ARRL nor NCVEC proposes any lowering of written
| qualifications for General or Extra from what I have seen.

ARRL has proposed that current Techs/Tech+ be upgraded to General.
Since the current General qualification protocol calls for both the
current Technician written test and an additional more strenuous General
written examination, granting a Technician license to someone who has
not passed that additional examination ipso facto results in a lowering
of written qualifications for the one-third of a million licensees
affected.

Now you can dance around that fact all you want, but you can't change
the reality that the "written qualifications for General" will have been
lowered for roughly 323,055 individuals. We can
pick-flyshit-out-of-the-pepper-pot forever wrestling with the niceties
of semantics, but the cold hard fact is that out of the new 'combined'
General class, only 30% would have met todays written qualifications for
that license. The remaining 70% would have met a significantly lower
qualification. That walks like "lowered qualifications", it talks like
"lowered qualifications", it smells like "lowered qualifications", and
in fact IS "lowered qualifications".

| It is not about caring what you may think, but rather what
| our (NCI) membership wants.

Are you sure? Here is a direct quote from an email from another of the
NCI directors.

".....our members by an overwhelming percentage
like most parts of the ARRL proposal. That
doesn't translate into what our comments will
end up being; it's like sausage made by a Board
of people. We'll see what happens ...."

I can easily interpret that to mean that the "sausage" may NOT
necessarily include all the ingredients desired by "an overwhelming
percentage" of NCI members.

Cheers,

de Hans, K0HB

Wow, quite the spin. If a person wants to have General privileges right now, do you suggest that they take the Technician test and wait for the "adjustment"?

Even if the tests are "reinstated", which I doubt will happen, it will take a long time before the majority of "Generals" are those that have taken a General test.

Can I join your organization to influence your member base opinion?

And be that such as it may, it is now evident that an apparent majority of NCI members support the majority of hams to be at least at the General level without being tested for it. That cannot be denied.

Another story? Listening to the membership?

> What if suddenly most of the membership
> had a change of heat and supported extensive code testing.

Illogical construct. To be an NCI member requires opposition
to code testing. That's a basic NCI 101 item.

> Would you support that?

Ditto my last comment.

Would you support the NCVEC proposal?

I have personally filed my own comments supporting ARRL
with the exception of the code test. I support the NCVEC
petition only to the extent it equals ARRL except I supported,
of course NCVEC's dropping code.

> I noted that NCI was going to morph a while back.

Life goes on, you are free to think whatever you wish
of us. Bottom line, our core agenda goes forward and,
for the moment, we have been asked by our memebrship
take a position on more than just the code issue. In
the end, the FCC is the only place all this matters.

That is a one-time adjustment/upgrade. It does not alter the testing
requirements for General on a permanent basis. But enough, we
can at best agree to disagree as I hold no prospect of changing
your mind.

Cheers,
Bill K2UNK

Correct. And then there is the "day after" problem. Anyone that thinks
that there won't be tremndous pressure exerted to KEEP the testing at
the Tech level is less than clever.

By contrast, your plan is wonderful, and you know I have some problems
with your plan. But if it were a choice between the three, You'd have
it. At least yours won't reduce qualifications overall.

From what I've seen, a "semi official" position of NCI is "we don't
care what anyone thinks".

Bill,

With all due respect, you have it bass-ackwards.

It's not your job to change my mind. It is my job to persuade you (a
director) to follow the wishes of me (the member).

Cheers,

Hans, K0HB

Anyone can join as long as you agree to the basics of being
an NCI member.

> And be that such as it may, it is now evident that an apparent majority
> of NCI members support the majority of hams to be at least at the
> General level without being tested for it. That cannot be denied.

Imprecise statement. The NCI membership supports a "one-time"
upgrade.

>bit (but not necessarily the volts)!

Nope...Not an M.D....An ER/Trauma Nurse with 15 years of EMS behind that.
But it only took one electrocution to make me a believer. The one victim in
particular was in a trench along a runway installing new lights...Somehow his
feet came into contact with buried power lines that the work crew was unaware
were there.

Typical paddle application for defibrillation is to the left chest wall
and upper midline sternum. The placement of the paddles in combination with
the delivered current attempts to repolarize the the irratically firing SA node
causing ventricular fibrillation. (That's the "HE'S IN VEE-FIB" you hear on
countless episodes of "E.R." and "Third Watch".)

Congrats on being an EE. Does it make you immune to electrocution? Does
my NOT being an M.D. in any way diminish the fact that sufficient current
sustained by adequate voltage can be fatal regardless of how or where it's
applied to human tissue?

Nothing stands still, Bill. The idea of the technically adroit Amateur
radio crowd has been taking a beating lately, and the winners are pretty
full of themselves at the moment. We've gone from "simply" eliminating
the Morse code test to giving the majority of hams an untested-for
upgrade. This is plenty uncomfortable for people like me, that happen to
like the lost idea of technically savvy hams.

>
>>You can call it an adjustement. The adjustment is a lowering of the

Perhaps. I can respect the idea that an adjustment might be warranted
by circumstances. I can respect the idea that the General test is too
hard. (note that I would disagree) But the idea that it is not a free
upgrade for most hams and that since it is a supposed "one time" thing,
it *isn't* a lowering of standards is doublethink.

| The NCI membership supports a "one-time"
| upgrade.

That's probably not a remarkable revelation, given that the overwhelming
majority of the NCI members are Technicians who would naturally benefit
from such action.

The REAL question isn't what the NCI membership supports, but rather....

Q: Will the NCI Board of Directors recommend
upgrading all Tech/Tech+ licensees to General
without further testing?

A: (please select one and only one answer)
___ Yes
___ No
___ The Board will take no position on this matter

Cheers,

Two questions, Hans...

Can YOU pass the current written examination without using one of the Q&A
pubs to prep for it?

The "problem" is not with the content of the tests. It's with the fact
that we find it necessary to humiliate ourselves by allowing emotional cowards
and mental weaklings to have brought the tests down by demanding that we "open"
the polls.

My other question is what did you do with the education provided you?
Judging by your almost automatic use of profanity anymore, the money got spent
elsewhere.

Oh - those are the Doppler radar units, particularly the one in Chatham
in my area, although I'm on the southwestern fringe of it.

And all they did was create quiet zones around many of them, for a
radius of 30mi. in some cases.

And once upon a time, they were simply for the elimination of the code
test.

And you, kind sir, know exactly what an imprecise statement is. Dontchya?

I don't think that's a problem. I've been openly critical of both the ARRL and NCVEC proposals, both in public forums like this one, and in email and telephone exchanges. I think a couple of the Directors are sick of my lobbying, but they're not retiring my membership number.

This has been rehashed so many times, but as you know the difference is that you did not have to prove in a practical test that you could have a satellite QSO, only answer questions on it. If you weren't allowed to bash away at the key because you couldn't find the passing satellite in the test I would say that would be unfair. There is only one practical test, and it only relates to one mode. If you can't see how lop-sided that is, then it can only be because you don't _want_ to see it.

I lived in Daly City (St, Francis Heights area) from 1977 to 1985
and there were no restrictions on the 1960-era house and lot.

>Westlake, an area closer to San Francisco, maybe even part of
>Daly City for all I know,

Yes, the Westlake District is an integral part of Daly City that was
the first tract development by Henry Doelger post WW-II (in fact
when one says "Daly City" one thinks of Westlake first).

>has extensive CC&Rs, including requirements
>to keep your house painted in an acceptable color and to keep a living
>palm tree on your living green (grass only) lawn

That requirement was overturned as unreasonable by a court case in
the early 1970s.

My kids, OTOH, live in one of the condos up near the water tanks in
the foothills of San Bruno Mountain (still in Daly City) and there
are CC&Rs up the wazoo. For obvious reasons they did not seek my
legal advice or assistance before they bought the (obscenely-priced)
property - no big deal, neither of them are hams.

> All of which is to say that conditions may vary greatly within

>with the earlier posts which note that the Realtor (tm) -- yes it is a
>restricted term than just anyone may not use -- is working for the
>seller and that involving a knowledgeabla local real estate attorney
>is your only guarantee.

Now for Cathy -

Make your receiving, examination, and acceptance of all the
restrictions (CC&Rs and any Homeowners' Association Regulations)
a contingency of any offer, and get some advice from a local
ARRL Volunteer Counsel who can give you local information of the

sort that Hans gave you about Plymouth. VCs are listed on the ARRL web site - you should touch base with one first.

Also it would not be a bad idea to touch base with Jay Bellows, K0QB, the ARRL Dakota Division Director who lives in St. Paul. Jay is one of a handful of us attorneys who deal in zoning, permit, and legal issues involving amateur stations on a regular basis, and was the attorney who was successful in getting the key U S Court of Appeals ruling in _Pentel v Mendota Heights_ upholding the FCC's requirement that a municipality must give "reasonable accomodation" to amateur antenna structure applicants.

I can only wish you good fortune in finding a place that suits your needs.

Where is CW going? I've not heard of any rational proposals by
regulators to ban CW from amateur radio. In fact, CW is not banned
from the Maritime Services either - it just isn't required as it
once was for distress and safety purposes.

<Shudder....>

My wife's present specialty is runway utility and lighting design
for upgrades of major airports and conversions of military airfields
to civilian use. Although she doesn't go onto the jobsite - that's
done by electrical contractors on bid - she has mentioned many times
that the "as-installed" drawings were missing or they were inaccurate.
I'm thinking of two particular SAC bases (one is still active, the
other is a conversion) that she's working on now which I had
"intimate familiarity with" when I worked for SAC 40 years ago.
Like "old home week"..... <ggg>

An interesting statement, to say the least, Bill. Does NCI speak for all 680K+ USA licenced ARO's? If not, you should at least be aware that what you're attempting to accomplish (Not really the appropriate word to use wrt NCI, but...) will ultimately affect all 680K+.

The only thing you REALLY have working to your benefit is the current apathetic stance of the FCC. A "reduction of effort" appears to be a shared goal. As a member of the 680K+ club who is not an NCI member, I am saddened at what NCI's influence is doing to my chosen hobby/service.

BTW, to all those who feel similarly, please take the time to write (or e-mail) your elected representatives...and I DON'T mean the ARRL. I just had the pleasure of attending a presentation given by an upstate lobbyist who explained how easily our elected representatives can become "involved" re. an issue as long as they receive an indication of public interest. Believe it or not, 15 to 20 e-mails, letters, calls, etc. on a given issue will likely get it some attention and it will be assigned to a staffer. Usually a casual inquiry will follow. In this case...to the FCC. Take the few minutes to fire off an e-mail...it really could make a difference.

Remember the vanity call system.

There may actually be a market for converted UHF gear for CB. The key here
is CB, NOT 11 METERS. Some countries in Europe have FM CB. I don't know what
the frequencies are, but quite likely VHF or UHF.

Other than that, for anybody still reading this thread - ever hear of a non
amateur UHF SSB radio?

In general, this thread is in the same line as converting old black/white TVs to color.

>Bad Idea.

I'm feeling it's a good idea. It's a good idea first of all because it
will now make it legal to sell a lot of those military surplus wideband
DC-to-daylight amplifier systems.

And it's a good idea secondly, because the CB crowd already has bootleg
linears and there is already a substantial underground selling the things.
If it's legal, maybe at least more of those guys will be using clean
linear amps that aren't bandsplatter machines. If the FCC can't stop
the sale, they can at least try to reduce the sale of the worst amps out
there.

>They have _not_ proposed making any change to the Part 95 rules, which

Mike & Cathy,

Sorry if I wasn't clear about the attorney's role. My point was that
the thing to do is to line up a good RE attorney right away, with the
understanding that when you are seriously considering a particular
house you'll have the attorney research it.

In my local RE market, things move so fast that you need to have all
your people ready to go beforehand. MN may be different, though.

In a perfect world, yes. But fewer than 1 in 100 Americans is a ham,
and many hams are in the same family, so the chances are good that a
given RE agent will have little or no experience with antenna
restriction covenants and such.
>

Someday I will have the proverbial couple of unrestricted acres in the
country with the antenna farm. Right now other considerations govern.
That's the spot most hams are in when house hunting.

Yes it's a troll post, but George by no
means needs any help on embarrassing himself.
He's been a troll in Rec.Radio.CB for years now,
using thousands of different screen nics and an AOL
account, so he really doesn't need any help to
embarrass himself.

Watch by his reply, you'll see either from
his Comcast account or AOL account.

FYI as any one reading this can guess WA3MOJ, is being forged.. It is being done by a group of anonymous out law CBers from rec.radio.cb. Thier goal is to punish licensed hams who have spoken out against freeband, mod'ed radios, and, illegal power in that newsgroup. Operating outside the rules means a lot to these CBers. Anyone that disaproves of it is seen as a threat. A licensed ham who does not 'go along with the program" and is foolish enough to use his callsign in that group gets harrased. Recently, one, of the out law CBers rang door bells, left notes, and took photos at the residences of hams N8WWM and KC8LDO for the purpose of stalking them. This is now a court matter. Also these same CB out laws are so ignorant they get mixed up and latch on to call signs of hams who do not even post there which is the case with WA3MOJ, N7VCF, and, others. It may be best to let them forge away so that the ISPs involved can shut them down.

maybe if the F.C.C gets enough complaints,they will investigate and
see if its really WA3MOJ or not.
if you care so much, get in contact
with him and ask him to quit selling illegal stuff.

Have they considered renaming the "Extra" license to the "Nothing-Special"
ticket?
Or just make it a "General"; that's what my 1st Class Radiotelephone is now.

Seriously, what's needed is to "re-invent" a truly entry-level Novice
license (give it a snappier name) that encourages young people to tryout
amateur radio before the more serious regulations and theory knowledge is
required for the advanced license(es) .

You're right about the name. People, young and old have been big on titles for several years like for instance, Sanitary Engineer for janitor or Executive Assistant for an entry level secretary.

Maybe call the new class Certified Electronic Experimenter or Electronic Experimenter In Training or some other snazzy name. The young kids are looking for something like that. Novice is an immediate turnoff nowadays. The new class wouldn't have to have lots of privileges, just a classy name to attract most young people.

I agree. And when the Novice ticket became renewable, the test materiel got harder; that made it more difficult to attract middle school and early high school candidates. In my day, it was knowing just enough of the rules to get by and a very little theory to operate at 75-watts input with a crystal to keep us in our band. From that, I gained enough interest in radio to get the Extra before the disastrous "incentive licensing" debacle took place. Today's beginners need to be connected with computers, so I think that the simple entry ticket (CEE ?) should allow all digital modes within restricted sub-bands, including the HF bands. The code capability should be an endorsement thing, with a small bottom-of-the band CW incentive, much like the Extras has today. However, the no-coders should be able to use cw within their sub-bands, without the endorsement. But when BPL gets going full force, maybe all such concerns will just be academic as the bands won't be much good for anyone except the power companies.

Hello, Dan

It really depends upon your area whether you'll find a lot of use or very little. Someone in North Dakota might not even have a repeater available, yet if he fires up on 75 meters in the evening - wow! It's busy! Likely no one is near him, he simply hears a ton of stations via F layer reflection.

Rochester, NY, is hardly Chicago or NYC, but I've filled my limited memories on my HTX-404 (10 memory channels plus 3 priority channels) - every one of them usable. I've chatted at 3:00 am with a trucker in Toronto via the Toronto repeater (linked to the Rice Lake repeater in Canada which I can use very well). I've chatted locally at 2:00 am with a professor from the University of Rochester. Usually, there is some activity on 440 almost every time of day (with the exception that it does get quiet between midnight and 5:00 am LOL).

We have a *ton* of repeaters (I can use more than the 13, but that is the limit of memory on the old Rat Shack HT) around here. One of the repeater systems has ports on every band from 10 meters to 1.2 GHz (including 900 MHz). I've chatted with Australia and England via the 10 meter port (whilst I was on one of the 440 ports). It really all depends .... ;)

I beg to differ. Hans has been most helpful. He has given a little comic
relief to what was an obvious troll.

The state should get a new mental health counselor. It's not working.

Good advice, Bert.

Let's not forget that unless Bill is a master Sophist - and I highly
doubt that - he would not be espousing the mass upgrade of Technicians
unless he personally supported it.

All the fluff about membership wishes is just that - fluff.

For Christ's sake George, can't you see Doug is a useless compilation of
semi-human DNA? What a loser. Ordered to seek mental health? He must have
really flipped out for the court to order that in such a case.

3000. "Harry's Hams" a policy violation

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-21 18:24:52 UTC
From: Scott n7rvn <n7rvn@hotmail.com>
Message-ID: <ohxhc.33063$pk5.18061@fe03.usenetserver.com>
Source record: 91064

I am looking for an article about "Harry's Hams". The article was published in May (I believe) of 1983. I am pretty sure of the year. Can anyone either scan, copy, or heaven forbid type the text of the article so I can get accurate information?

The article addresses a weather net that a local forecaster used to report the information he overheard on the nets. He called the guys on the nets "Harry's Hams" and the FCC squashed that quickly. Seems the FCC felt sharing this as his hams doing the work for the television station, violates the regulations. Imagine that. Today the fines would be huge for that little faux paw.

Any help would be appreciated.

Thanks

Nader: Iraq an Unconstitutional, Illegal War

Based on Five Falsehoods:
CONGRESS SHOULD BEGIN IMPEACHMENT INQUIRY OF BUSH AND CHENEY

"All public policy should revolve around the principle that individuals are responsible for what they say and do." -- George W. Bush, 1994.

Washington, DC:
Building on his call for the impeachment of President Bush and Vice President Cheney, Independent Presidential candidate Ralph Nader today is calling on Members of the House of Representatives to begin an impeachment inquiry to investigate two distinct impeachable offenses.

An Impeachment Inquiry is the first step toward considering Articles of Impeachment. During an Impeachment Inquiry the House would investigate whether there are potential impeachable offenses.

Impeachment Inquiry and the Process of Impeachment

While the Constitution is clear in granting the impeachment power to the House, it leaves the development of mechanisms for exercising the power to the House. As noted by the Association of the Bar of the City of New York in "The Law of Presidential Impeachment By the Committee on Federal Legislation" (see: http://www.abcny.org/presimpt.htm):

"A variety of methods have been employed to institute impeachment proceedings: Charges may be made orally on the floor by a Member of the House; a Member may submit a written statement of charges; one or more Members of the House may offer a resolution and place it in the legislative hopper; a presidential message to the House may initiate proceedings. The House has also received charges from a state legislature, from a territory, and from a grand jury. Finally, there may be a report of a committee of the House which may submit facts or charges that will lead to impeachment. Under the rules governing the order of business in the House a direct proposition to impeach is a matter of highest privilege and supersedes other business. Similar privileged treatment is given to propositions relating to a pending impeachment."

The purpose of the Impeachment Inquiry is to have a Committee develop a report for the House which then can be considered for the purpose of determining whether to proceed with impeachment proceedings. The House

determines whether to impeach based on a majority vote. It is important to remember that impeachment does not mean conviction - that is left to the Senate. Impeachment is the equivalent of an indictment, making formal charges, which the Senate then considers. Conviction requires two-thirds of the Members present in the Senate to vote for conviction.

Two Potential Articles of Impeachment that Should be Part of an Impeachment Inquiry

The Impeachment Inquiry should focus on two areas involving President Bush and Vice President Dick Cheney.

The unconstitutional war in Iraq.

"The Inquiry should examine whether President Bush and Vice President Cheney have gone beyond the bounds of the Constitution, defied the rule of law, and if so, whether impeachment is the appropriate constitutional punishment," said Nader. The United States Congress never voted for the Iraq war. Congress voted for a resolution in October 2002 which unlawfully transferred to the President the decision-making power of whether to launch a first-strike invasion of Iraq. The United States Constitution's War Powers Clause (Article 1, Section 8, Clause 11) vests the power of deciding whether to send the nation into war solely in the United States Congress. This can only be changed by a constitutional amendment.

"Our founders had seen what could occur when the power to declare war was vested in one person, a King or a Queen, so they took clear steps to ensure no one person could declare war for the United States. As James Madison wrote: "In no part of the constitution is more wisdom to be found, than in the clause which confides the question of war and peace to the legislature, and not to the executive department," noted Nader.

Five Falsehoods that Led to the Iraq Quagmire:

Making matters worse in this situation, the illegal first-strike invasion and occupation of Iraq was justified by five falsehoods. Nader calls for a second area for Impeachment Inquiry to examine: the "five falsehoods that led to war." In 1994 George W. Bush said: "All public policy should revolve around the principle that individuals are responsible for what they say and do." In 2000, he ran as the "responsibility " candidate. Manipulation or deliberate misuse of national security intelligence data, if proven, would be "a high crime" under the Constitution's impeachment clause. Article II, Section 4 of the Constitution provides: "The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors."

WEAPONS OF MASS DESTRUCTION.

The weapons have still not been found. Nader emphasized, "Until the 1991 Gulf War, Saddam Hussein was our government's anti-communist ally in the Middle East. We also used him to keep Iran at bay. In so doing, in the

1980s under Reagan and the first Bush, corporations were licensed by the Department of Commerce to export the materials for chemical and biological weapons that President George W. Bush and Vice President Dick Cheney later accused him of having." Those weapons were destroyed after the Gulf War. President Bush's favorite chief weapons inspector, David Kay, after returning from Iraq and leading a large team of inspectors and spending nearly half a billion dollars told the president :We were wrong."

See: David Kay testimony before Senate Armed Services Committee, January 28, 2004.

IRAQ TIES TO AL QAEDA:

The White House made this claim even though the CIA and FBI repeatedly told the Administration that there was no tie between Saddam Hussein and Al Qaeda. They were mortal enemies - one secular, the other fundamentalist.

SADDAM HUSSEIN WAS A THREAT TO THE UNITED STATES:

In fact, Saddam was a tottering dictator, with an antiquated, fractured army of low morale and with Kurdish enemies in Northern Iraq and Shiite adversaries in the South of Iraq. He did not even control the air space over most of Iraq.

SADDAM HUSSEIN WAS A THREAT TO HIS NEIGHBORS:

In fact, Iraq was surrounded by countries with far superior military forces. Turkey, Iran and Israel were all capable of obliterating any aggressive move by the Iraqi dictator.

THE LIBERATION OF THE IRAQI PEOPLE:

There are brutal dictators throughout the world, many supported over the years by Washington, whose people need "liberation " from their leaders. This is not a persuasive argument since for Iraq, it's about oil. In fact, the occupation of Iraq by the United States is a magnet for increasing violence, anarchy and insurrection.

Nader urges the Congress to investigate the illegal nature of the war, and how the five falsehoods became part of the Bush Administration's drum beat for war, in a formal Inquiry of Impeachment.

In the run-up to this war, Not In Our Name became one of the major "peace" organizers and coalitions in the United States. Not In Our Name has spared no cost purchasing ads in newspapers around the world to publish its anti-American Statement of Conscience. Its signatories include scores of Hate America bigwigs, like Noam Chomsky, Howard Zinn, Michael Parenti, Gloria Steinem and Barbara Kingsolver. Hollywood icons (and many more has-beens) like Danny Glover, Jessica Lange, Tyne Daly, Martin Sheen and Ed Harris have also signed or endorsed the statement. NION organizes marches and other protest activities in its support.

However, Not In Our Name is deeper than the latest academic babblers and limosuine liberals. NION professes peace, yet it is involved - directly as well as indirectly - with terrorist organizations and anti-American propaganda campaigns headed by fanatical Communist and Muslim groups. NION has cemented alliances with bona fide radical organizations like the Interreligious Foundation for Community Organization, Women's International League for Peace and Freedom and the Revolutionary Communist P

I am fully aware of that. There 'used to be' a LOT of 2 meter activity
around here. It all died away. There are 300 licensed hams in Calhoun
county. Maybe 30 are active.

When it comes to DX, I use all the tools at my disposal. This means I do not limit my efforts to the clusters. When I dial up and down and search, sometimes I'm lucky enough to find that DX before others do. Then it's really easy to work them.

Clusters are a pain in the rump. Dee has it right...tune and pounce...hi.

Basically the situation is .... if you catch the DX on the first or maybe 3rd call...you have a chance to work them.. Otherwise the clusters are active and you have a million callers. Some of them can actually hear the guy.

This is why you guys want peoples anmes and addreses to harass them. Yet
the poster did not have enough balls to use thier own name.

This is the sort of thing Roger Wiseman, AB8MQ likes to pull. He has done this to others and he DOES like to hide behind "two or more anonymous remailing services" because he has lost previous ISP's for this sort of maliciousness.

NCI isn't in favor of elinating morse code...morse code
testing, yes.
Assuming you meant that you want morse testing ended, but
don't faorv support of the ARRL or NCVEC petitions...
well I see nothing in that stance that would serve to disallow
you from joining NCI. As an example, I think it is safe to
say that is exactly Hans's position.

> >>And be that such as it may, it is now evident that an apparent majority

That can't be stated with any accuracy as we never had
any indication of how members felt about anything beyond
the code test.

> And you, kind sir, know exactly what an imprecise statement is. Dontchya?

I know accuracy when I see and when I don't.

Cheers,

Good! Then, regardless of the overwhelming support of NCI members for the ARRL "Great Giveaway", I can continue to lobby you and the other directors to have the courage to do the right thing and make a strong case against instant upgrades for 60+% of all licensed amateurs.

I don't believe any organization can claim they represent all
680K licensed USA hams.

> If not, you should at least be aware that what
> you're attempting to accomplish (Not really the appropriate word to use
wrt
> NCI, but...) will ultimately affect all 680K+.

Actually, it won't. Many hams will be unafected by the changes
in licensing put forth by ARRL, NCVEC as well as others.
Those 100K hams that are already Extra won't be affected by
any license changes.

> The only thing you REALLY have working to your benefit is the current

Sorry, I didn't put the "test" in the sentence. I know that as of this
moment, they claim no interest in eliminating Morse code.

That could change tho'. I'm not arguing that point, although it would
be interested if your membership expressed interest in that.

> Assuming you meant that you want morse testing ended, but

That wasn't my point, Bill. Or perhaps in a way, it was. Would you come
in here and tout NCI's likely support of the ARRL proposal if you say,
felt about the subject as Hans does?

Your argument holds no water. Doug has brought ALL of this
upon himself. When and if Dougs mental health becomes
stable he may realize why his life is so miserable. He'll realize
that it is foolish to harass people and justify it with the argument
that he is just doing his civic duty. Until he wises up nothing will
change.

Have a miserable day/life Doug.

The degradation of quality wrt the ARS is, for many, an effect...ostensibly
brought on by NCI's lobbying. It's not just about one's individual license
change.

>
That's ten percent, that's not bad at all. But it depends on the
regional population density which varies enormously across the
country. We have individual suburban townships which have as many as
200 ham residents here in the Delaware Valley region of the NE
corridor. This county alone has 43 municipalities, etc. We still have
the old 2M packet spots system up and running from Virginia well into
New England.

I have no idea what the actual numbers are but it's probably safe to
assume that most of the repeaters in this region have hundreds if not
thousands of potential users each. If even ten percent of 'em got on
the machines there would be complete chaos never mind what would
happen if the whole pack fired up and "got active". My point being
that activity levels in terms of perceptions of activity levels varies
all over the map. Literally. e.g., this patch ain't Calhoun County!

A couple trends I think I'm seeing here at least on 2M are movements
back to FM simplex ops and a noticeable growth in the use of SSB which
is being fueled by the availability of affordable multimode rigs like
the 706 and the 817. Might be that after 35 years or so of repeaters
dominating VHF/UHF ham comms they've run their course for a number of
reasons, the costs of acquisition, installation, maintenance and
operation being what they are.

Another piece of this discussion I think involves what I call the "Nocode Bubble". We all know that in some huge number of instances these folk have come into the hobby, jacked up the total head counts by very large percentages and have left never to be heard from again. But they're still taking up space on the FCC license servers and skewing the real-world data by inordinate amounts. Pull the nocode data out of the mix when talking about activity levels vs. raw head counts and you get a whole different and much more realistic picture of ham radio as it really exists in this country.

You are correct. The most important thing to remember is what we
all knew already. He has mental problems. The court would never
order mental health counseling unless he has been diagnosed with
the disorder.

WA3MOJ,

Where can I buy a new AMP? I need one for my CB but I don't want a used
one. I know I could do a search google for one, but I'm a democrat and
need to be spoon-fed everything. Thanks.

March your way into the weekend!

Join Nader supporters in DC, April 24-25,
as they rally for justice and equal rights

Washington, DC:

Saturday, April 24th, IMF/World Bank Protest - meet at 11am, 15th & H St, NW.

Sunday, April 25th, March for Women's Lives - meet at 9:30am, Smithsonian Metro Stop.

If you arrive late, ask a volunteer to point you towards the Ralph Nader group.

See you there!

Nader: Oil the Source of Two of Earth's Major Problems:
Wars for Oil and Climate Change

Protect the Environment and the People of Our Planet by Ending Our Addiction to Oil

Washington, DC: On Earth Day 2004, Independent presidential candidate
Ralph Nader highlighted as two priorities: ending the Iraqi occupation
and facing up to the immediate crisis of global climate change. "Future
geopolitical crises involving oil resources and environmental problems
will be diminished by finding alternatives to fossil fuels," said Nader.

Nader linked the two issues on Earth Day because he sees them as
symptomatic of the corporate oil-based, planet destructive behavior of
the Bush Administration. Nader has called for the United States to
withdraw from Iraq - including military, private military contractors,
oil industry and other corporations. Nader noted: "The war in Iraq is
unleashing widening cycles of violence. The potential for escalation of
violence increases every day the US military remains in Iraq. The way to
reverse the spiral of violence is for the United States to go back home.
The US presence serves as a magnet for the insurrection, kidnapping,
terrorism and destruction." Nader released a three-step strategy for
withdrawal earlier this week. See www.votenader.org for details.

to be found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Onions
peppers
celery
garlic
soy sauce
salt pepper, etc
Olive oil
breadcrumbs
Tomato Gravy (see index)

Boil the cabbage leaves for 2 minutes to soften.
In skillet, brown the meat in a little olive oil,
then add onions, peppers, and celery (all chopped finely)
and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
and bake at 325 for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
cords so they won?t be tough).
Place a slice of ham and cheese on each, along with some minced onion
then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcrumbs;

allow to sit for a few minutes.
Saut&#65533; in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb, poultry, and vegetables; just about anything can be grilled, and young humans are no exception!

High quality mari

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties or stuff into natural casings.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
&#65533; cup vegetable oil
2 large onions
bell pepper
celery
garlic
&#65533; cup red wine
3 Irish potatoes
2 large carrots

Thi

Cathy

Thanks to a couple hams in this city, Golden Valley MN has very nice antenna "restrictions". I don't know all the rules, but as I understand things, the city essentially matches most of the FCC regs. The only thing I would check on is maximum tower height. A large number of antenna installations are allowed with no permissions at all.

Feel free to email me at throwaway27 at taring.org

Golden Valley is very ham friendly. The city donates space in the Public Safety building for our W0EF club station. See http://www.tcfmc.org We have a full 2-position contest station on MF/HF, antenna towers atop the building, etc. They also provide a free meeting room for our club meetings, and break-room facilities for coffee/snacks during contest weekends and club meetings. The only "cost" to our club is that we provide a 2-person Skywarn team at their EOC during severe-wx.

"Cell phones performed as expected -- i.e., not very well -- ".

And that is why the military and other emergency officials do not include cell phones in their emergency planning , but they do include amateur radio.

I spent a whole career involved in military (Naval) communications planning, from single units to entire fleets, and never once included amateur radio as a component of that planning.

Civil Defense guys like FEMA in fact do count on amateur radio in emergency situations.

If you want to keep your ham license my advise to you is not to make any
conversions to 11 meters. CB radios still need FCC acceptance. If you
want to undertake the task of getting the acceptance then disregard my
previous advice. BTW the tests to obtain acceptance should only cost you
1 or 2 hundred thousand dollars if you are lucky.

There is a technical reason for DENYING such an automatic upgrade:

The general class test has "many" questions involving HF operation.
The technician class test has few to no questions involving HF operation.

The reason is simple: They should not get a privilege that their test did not ask (or potentially ask) about.

[For those of the "dumbed down" school: They should not get a privilege related to a topic for which the question pool lacks a "token question."] :-)

Okay, what I ended up getting was a Larsen... A 5.8 wave... I'm using
a diamond mag mount (pinched my fingers on that sucker... Good
magnet!) Had to get a SMA adapter... I told the guy to include it,
and he didn't... Good guys at HRO though... No shipping at least.
Fast delivery. Can't ask for more than that, really...

I look forward to giving it a test flight tomorrow. Thanks for the
information folks! It really helped.

You never seerved at a Naval facility that didn't have a MARS station or
used MARS for passing ANY kind of traffic, Hans...???

I know of four military facilities, one of them Naval, that incorporate
MARS teams for emergency purposes, and two of them that utilize RACES teams for
civil coordination in appropriate scenarios.

>Civil Defense guys like FEMA in fact do count on amateur radio in
>emergency situations.

"Civil Defense guys" include military planners. I just finished
"Heartland Response 04" and I can tell you that there were at least two
uniformed representitives from Penatgon offices there.

Guess they forgot to consult you first, Hans.

Go figure, eh...?!?!

Sorry JJ,

MARS is not amateur radio.

Even if it were, phone patches home to Mom are great morale boosters,
but they not "emergency planning".

Where did I say MARS was amateur radio? I did not even mention MARS.
These were phone patches made on the amateur bands by Naval personnel
who held amateur radio licenses.

Been there, done that. It's just amateurs passing third party morale
traffic to other amateurs and has nothing whatever to do with "emergency
planning".

Steve, you're confusing MARS with Amateur Radio. They are not the
same thing.

> I know of four military facilities, one of them Naval, that incorporate
> MARS teams for emergency purposes,

That's like saying, "I know of military installations that are guarded
by military police,"

MARS is military. Check out what the acronym means sometime.

and two of them that utilize RACES teams for
> civil coordination in appropriate scenarios.

"and two of them use contract security services."

> >Civil Defense guys like FEMA in fact do count on amateur radio in
> >emergency situations.
>
> "Civil Defense guys" include military planners.

Except when one is Master Chief Brakob or MSgt. Burke.

I just finished

Sorry Hans, MARS >>IS<< "Amateur Radio".

With the exception of a very few Active Duty personnel assigned to oversee the program, every single person in all three branches of MARS are licensed Amateur Radio Operators.

Prerequisite #1 for ALL branches is licensure in the Amatuer Radio Service.

>ex NNN0GCM (Area Coordinator, Navy/Marine Corps MARS, Guam/Mariana
>Islands)

Congratulations. None of it changes the facts about MARS, however.

Formerly NNN0VVU (CHOP, NNN0MOC/MOF, Assistant Islandwide Coordinator for Okinawa, 1981), AFA1OQ, AAT4SA.

So there....Nyah.....

Steve,

Hans was involved in emergencies. He can tell you the story about getting comms back up to Guam from Saipan (did I get the right island that time, Hans? ;)

What everyone seems to forget here is that a considerable amount of military traffic just might be classified. Also, do you want anyone knowing what the ratio of classified to unclassified traffic is? If only some traffic were encrypted, if that ratio changed to much more encrypted, people might be able to draw some guesses as to "something is either happening or about to happen".

The military has their way of doing things, and, quite frankly, I think they do it very well indeed. No slam on amateur radio, but this is a very different situation. Even military radios have mil-spec components and can operate in conditions that our radios could not stand up to. You might be in the Middle East in a desert in summer with sandstorms or in Korea in the wintertime. You might be in a jungle with extensive rain and 100% humidity. You might be in mountains.

Why would they try to include an unsecure (as opposed to encrypted - which, by our laws, cannot be encrypted) service with gear that may perform well - so long as the temperature is between 40 and 90 degrees farenheit with a relative humidity between 30 and 90 percent and at an altitude not to exceed 10,000 feet?

73 from Rochester, NY
Jim AA2QA

Maybe not for "secret" traffic, but routine stuff would be handled by
hams to
offload the more important communications channels. Or maybe some
"secret" stuff, encrypted and disguised to look like boring routine
traffic, is
handled by hams, but they wouldn't be aware of it.

I know he was, Jim. It still doesn't negate the fact that there are
numerous MARS BST's (Base Support Teams) that are part-and-parcel of base
disaster relief programs. Hans would have us believe that this is not true at
ALL. He is in error.

>What everyone seems to forget here is that a considerable amount of military
>traffic just might be classified. Also, do you want anyone knowing what the
>ratio of classified to unclassified traffic is? If only some traffic were

Of course. And base commanders know what's "classified" and what's not.
A MARS BST would nhever even hear about "classified" traffic being passed, let
alone be handed something to pass.

>The military has their way of doing things, and, quite frankly, I think they
>do it very well indeed. No slam on amateur radio, but this is a very

>You might be in mountains.

Absolutely. And no one here (except those who keep trying to justify
thier rants by insinuating it's an "only-Amateur" scenario) is suggesting that
such is the case.

This is a forum relative to Amateur Radio. Most of the participants are
in the contiguous 48 United States, and I am going to "assume" that we are
discussing disaster situations involving the civilian populous in general.

In these specific exchanges we have included MARS as a resource for
"disaster communications" at those DoD facilities that have opted to implement
those programs, and certainly thos are facilities located within the United

States' jurisdiction.

Not all (certainly a few rather than a lot) have done so.

I know it's really rhetorical to do so, but since Hans has made a point of misrepresenting the nature and composition of the MARS programs, I have taken the stance of disagreeing with him. >>A L L<< of the MARS programs are made of of licensed Amateurs. No Amateur Radio operators, no MARS.

>Why would they try to include an unsecure (as opposed to encrypted - which,
>by our laws, cannot be encrypted) service with gear that may perform well -
>so long as the temperature is between 40 and 90 degrees farenheit with a
>relative humidity between 30 and 90 percent and at an altitude not to exceed
>10,000 feet?

I don't think JJ was making ANY suggestion of MILOPS in enviromental extremes, nor was he suggesting any interoperabilty where COMSEC was of concern.

MARS >>IS<< used in many instances for "disaster communications".

MARS is populated by civilian Amateur Radio operators. No...MARS is not "Amateur Radio", nor is Amateur Radio MARS...However, No Amateur Radio, No MARS.

My point here has been that Hans is belching out "absolutes" that are anything BUT absolute, and he has been, in some significant margin, in error in his representations of the MARS programs as they pertain to "disaster communications".

I know it quite well.

Military AFFILIATE Radio System.

That means licensed AMATEURS "affiliated" with that particular
MARS/military program.

No Amateur Radio Operators = No MARS.

> and two of them that utilize RACES teams for
>> civil coordination in appropriate scenarios.
>
>"and two of them use contract security services."

Very true.

No, I would not care to give you an "after action report", other than to
say I had a good time and a lot WAS learned/accomplished.

>> Go figure, eh...?!?!
>
>So does MARS still = ARS?

Only as it pertains to providing the people and resources to HAVE a MARS
program, Brian.

No Amateur Radio Operators = No MARS program. Such is NOT true with
REACT, Civil Air Patrol, the Coast Guard Auxiliary, and other
programs/agencies, although they MAY have some Amateurs participating. An
Amateur ticket is NOT required for them.

Unless, of course, you know of some secret DoD document that would deploy
Active Duty service persons to flesh out the MARS ranks if they all decided to
quit...?!?!

time,
| Hans? ;)

Yup, that's the right island <grin>.

The Crockstar is trying to somehow make MARS into an amateur radio program, and therefore make his case that military planners include amateur radio in their plans.

Of course MARS >>isn't<< amateur radio, it is the Military Affiliate Radio Service, which uses MARS frequencies, issues MARS licenses, and trains it's operators in MARS procedures. The only resemblance it has to amateur radio is the fact that most (not all) volunteers are recruited from amateur ranks. Not all amateurs are eligible to be licensed as MARS operators.

No one's "...trying to somehow make MARS into an amateur radio program".

I guess all that stuff in the various branches of MARS about disaster planning was just to use up the surplus ink. And those BST's...?!?! Just another opportunity to have lunch in the O-Club, Hans?

>Of course MARS >>isn't<< amateur radio, it is the Military Affiliate
>Radio Service, which uses MARS frequencies, issues MARS licenses, and

Duhhhh....Ya think...?!?! I believe I said (in not so many words) the very same thing.

>The only resemblance it has
>to amateur radio is the fact that most (not all) volunteers are
>recruited from amateur ranks. Not all amateurs are eligible to be
>licensed as MARS operators.

Just the majority of them.

No Amateur Radio = No MARS program.

It really is just that simple.

Steve, K4YZ

That's why Collins built the S-Line series of equipment, which was also
very widely used by amateurs. I still run an S-Line.

>
> Cheers,
>
> Hans, K0HB
> NCI # 4304

Hans,

With all due respect, your e-mails to NCI Directors have been answered, the
issues have been discussed with you, and your views have been taken into

account.
(As you have pointed out, you have not "been excommunicated" ... presumably you still support the "prime directive" (as opposed to the "sole directive") of eliminating Morse testing requirements ... it has been well-explained that that is a core principle that is considered a pre-requisite for membership in NCI.)

HOWEVER, with respect to the other aspects of the ARRL and NCVEC petitions, you must realize, in all reasonableness, that you are only ONE of thousands of NCI members - and your views were in the stark minority when we surveyed US members to ask them 1) "Do you want us to comment on the other aspects of the ARRL/NCVEC petitions?" and 2) "If your answer to (1) is affirmative, what do you want us to say?"

To imply something is wrong because your individual (significantly minority) views are not the determining factor in whatever the final NCI policy decision might be is unrealistic and as a representative Board of Directors, we would be remiss in our duties to the membership if we were to ignore an overwhelming majority.

Regardless of the personal views of the NCI Directors, as the representatives of a membership-supported organization, I believe we have an obligation to convey the views of the membership to the FCC. (Which is not to say that NCI Directors will not/have not filed their own *individual, personal* comments with the FCC that may express somewhat different *personal* views on some or all of the issues raised by the ARRL and NCVEC petitions.)

73,
Carl - wk3c

That's an interesting dilemma, Carl, and I think how you handle it is a measure of how well you're suited to a leadership role.

"As an elected official shall I officially support a wildly popular opinion which I disagree with, then privately file a position with my *personal* views in opposition to the organization which I represent?"

73, de Hans, K0HB

To his credit, Hans did take the survey and I'm sure that his views were consistent with what he expresses here.

However, as Bill points out above, and I have pointed out in a separate message, Hans is but one of thousands of NCI members, and the views he has expressed are in an extreme minority.

Once again, it would be irresponsible for the NCI Board of Directors to ignore the wishes of the vast majority of our membership in favor of honoring Hans' wishes - though we certainly did listen to and consider his views, and some of the NCI Directors even had lengthily e-mail discussions with him.

Hans,

Squeak away ... your are entitled to your opinion, even if it is in an extreme minority amongst the membership - and I'm sure I speak for all of NCI's Directors when I say that our in-boxes are always open to comment from you - and all of the other members of NCI.

Yes, democracy IS a damned fine thing!

Mike,

I respectfully disagree with your assertion ... the whole reason NCI
surveyed US members on the issues involved in the ARRL and NCVEC petitions
was so that we would know their wishes and act in a representative manner.

Mike ... are you suggesting that the NCI Board of Directors should have
ignored the wishes of an overwhelming majority of the membership and
listened only to Hans???

I don't think so ...
```

Hans,

WADR ... As a Board of Directors, the NCI BoD has an obligation to the membership to represent its views.

Your "question" is so patently biased against the BoD acting in a manner that is responsive to (and responsible to) the membership that I refuse to play that game.

Not at all, geo. Please don't get mad at me simply because the AKC has been
proven to be run by a mentally deranged deadbeat dad. BTW, is Doug your dad?
Is that why you get so incensed when someone attacks him?

P.S. If any of the above words are too big for you to understand, let me
know and I'll type more slowly for you.

I am a leader in the BSA.

When I am on my paying job, am I representing the BSA?

When a volunteer is signing AFA3xx, is he or she representing the BSA,
CSA, FFa or the PTA?

Nope. And neither are they representing the ARS or the ARRL.

> No Amateur Radio Operators = No MARS.

Not true. Regulations change every day. The regulations will be
changed to suit new conditions.

MARS would have an easier training load by training people off the
street rather than having to retrain a bunch of amateurs.

> Unless you were assigned the responsibility of incorportating those assets
> to your plan by higher headquarters, Brian. Are you stating for the record
> that if you are tasked with such a requirement that you'd disobey lawful

Comms was not my functional area, but weather comms were. But I will
state for the record that I'd write anything into the plan or opord
that hhq told me to - as long as it was a legal order.

> No, I would not care to give you an "after action report", other than to

Great! You accomplished WAS. Glad you had fun.

> Unless, of course, you know of some secret DoD document that would deploy
> Active Duty service persons to flesh out the MARS ranks if they all decided to
> quit...?!?!

I suspect that MARS, if need be, could find volunteers who didn't have
amateur licenses. Isn't that what CAP does? Doesn't CAP use radios

on military frequencies?

MARS is >>>NOT<<< "Amateur Radio."

Best of Luck, and last this subject.

Hans,

I think there are two sides to every coin .... and there are subtle, yet important, differences between "leadership" and "representation."

1) On one side of the coin, elected representatives have an obligation to represent and advocate for the views of their constituents - they should not, in my opinion allow their personal views to prevent them from fulfilling their duties to the constituents that they are supposed to represent - it's a sort of fiduciary duty.

2) On the other side of the coin, being an elected representative does not strip one of one's rights to one's own views - or the right to express them AS AN INDIVIDUAL as long as it is CLEAR that one is voicing one's individual views (and not misrepresenting them as the views of the constituency in the case where they might differ).

NCI's comments on the ARRL and NCVEC petitions accurately reflect the views of the majority of the membership - as well as the LEVEL of support on each of the major non-Morse-related points.

For the most part, having considered all of the pros and cons, I found that my personal views were *generally* in line with the views of a majority of NCI's membership - 100% agreement with the overwhelming majority views on the ARRL proposals and partial agreement/partial disagreement on some of the "deltas" in the NCVEC petition. (The member's views were much more mixed - less overwhelmingly one way or the other - on some of the NCVEC differences from the ARRL proposals.)

In my *personal* comments, I stated what *my* views were ... and I don't feel at all that I did anything at all inappropriate.

It sounds to me like you view "leadership" as "Listen to Hans' point of view and 'have the courage' to ignore the majority." Sorry, I won't abrogate my responsibility to the membership like that.

73,
Carl - wk3c

Not at all. I am but a single data point, and I could be wrong (but so far I've only been wrong once and that was the time I thought I was wrong but I wasn't <grin>).

"A leader takes people where they want to go. A great leader takes people where they don't necessarily want to go but ought to be."
---R. S. Carter

Put differently, leadership is not conducting a popularity poll and representing that as the best for Amateur Radio, but rather representing the best for Amateur Radio on the conviction that your constituents elected you to make good choices.

Mars certainly consists of Radio amateurs, and according to

http://www.asc.army.mil/mars/join.htm

you need to be an amateur.

And since you can ba an amateur without being in MARS, yet cannot be in MARS without being an Amateur.....

Her is something from from

http://www.ieway.com/~billw/wamars.htm

which seems to contradict that the MARS people aren't involved in emergency work.

Quote start:

In times of emergencies, whether local, regional, or national, you will find MARS radio operators handling logistics and emergency communications. A part of our membership is equipped to "go portable" with radio and computer equipment to help with health and welfare radio traffic handling. During the recent flooding, members assisted local authorities relaying messages from families to their relatives and friends in regards to their situations. After the earthquakes in California, members also handled messages from the earthquake victims to others outside the area. All phone systems were disabled or overloaded and the only efficient means of communication was by radio. Members of the MARS program were there to lend a hand.

NNN0ZSJ / NNN0GCC Five

Quote end.

So what is it guys. Is this person "innacurate?

While MARS "isn't involved in emergency work", we might read

http://www.marsgateway.net/docs/AR25-6.pdf

and sneak a peek at Chapter 1 paragraph 6, sentence a.

Let me know what it says. ;^)

There you go again Mike, upsetting the apple cart with facts. It seems
that some just can't except the fact that amateur radio and the military
have a close relationship and the military does accept amateur radio as
a valuable service when needed, but not cell phones.

Well put, Hans.

It seems to me that NCI could easily have stuck to their initial premise of only wanting to get rid of Element one and go from there. But they are not. Must be disappointing for you.

But that is just how it is. NCI has new fields to plow now.

No, I think that NCI members have opinions about everything from antenna covenants to BPL threats to abortion to pledge of allegiance and on and on.

I just don't see where they have relevance to what was *once* NCI's purpose - abolishment of Morse code testing as a requirement of licensing.

The instant upgrade of most amateurs to General is not related to code testing as far as I can see. And the unfairness to the people the "day after" that suddenly have to take a harder test.

Perhaps NCI should poll it's members about gay marriage? ;^)

Frankly, I'd buy a whole lot of stock from a man who did it, Hans.

It takes a lot of cajones for an "elected representitive", be it for an organization like NCI or a public official, to proactively represent the "majority" when it's known that his/her "personal" views are part of that minority.

A different Carter (Jimmy, to be specific...) tried this. He wound up gutting the intelligence community, tied our hands in covert operations, ran the inflation rate into double digits, left us humilated in world opinion for 444 days and got several of my friends killed.

When I vote for someone, I expect he will represent the majority...Not use his election as a license to do what HE wants to do despite guidance from hbis constituents to the contrary.

>on military frequencies?

What CAP does today is irrelevent to the topic being discussed.

And I have proposed changes to the AFMARS system that would allow CAP
members who have completed "ACUT" (Advanced Communicator User Training) and who
have demonstrated competency to be allowed to enroll in AFMARS.

But that is NOT what the rules allow now, and what MIGHT happen in the
future is irrelevent NOW.

>MARS is >>>NOT<<< "Amateur Radio."
>

I don't have a problem with the NCI leadership (actually, let me make that Leadership) taking a stand on any issue they wish. Hey, it's a free country. (In fact, I was confident that Carl (and a few other Leaders in several organizations including NCI) were forward looking enough to vigorously OPPOSE actions which tended to dilute the technical base of our hobby.)

But I have a real problem when the Leaders run a beauty-contest poll instead of making responsible decisions based on what's best for the Amateur Radio Service.

Asking the NCI membership, overwhelmingly Technicians, whether upgrading Technicians to General without testing is a good idea is pretty much akin to asking the cannibals of ZL whether the Christians should send more well-fattened missionaries. The answer is a foregone conclusion! Now they hide behind that "mandate" rather than taking a responsible stand against the "Great ARRL Giveaway".

In addition to this ill-conceived notion of free upgrades, we have looming another proposal for what amounts to an "Applicance Class" license. NCI has polled it's members on that gem also, and heaven help us if I'm again a "stark minority" in opposition!

There are important differences between "leadership" and
"representation" but they are NOT subtle!

"Representation" says "Elect me and I will do whatever is the most
popular based on the last poll, regardless if it's in our best
interest."

"Leadership" says "Elect me and I will do whatever is our best interest,
regardless how unpopular."

Steve,

Thanks for speaking up for the responsibilities of elected representatives
to BE representative of their constituents rather than using their position
as a platform for their personal views.

I particularly appreciate you comment in light of the fact that I know you
don't agree with me (or NCI) on some of the issues.

73,
Carl - wk3c

No, Mike, I never said that ...

AFAIK, Hans still supports the goal of NCI to eliminate Morse test
requirements.

And, as Hans himself has said, he has not been "excommunicated" from NCI for
having differing views on the other restructuring proposals than the
majority of the members ...

> instead of making responsible decisions based on what's best for the
> Amateur Radio Service.

There is a widespread and horrible misconception that it is ALL about "the majority". I see it all the time. On many issues, a majority will suffice. But there are some things that speak to something higher.

Can a majority in a democracy vote to dissolve the democracy?

Many times the majority would vote to enact laws that are illegal or unconstitutional.

A leader that simply does what the majority of members or votes want is not a leader. He is an employee.

> us if I'm again a "stark minority" in opposition!

Right, the employee thing again. When I have been in a leadership position, I have often polled the membership about their wishes. But it was always with letting them know that their opinion was taken under advisement.

Often we made our decisions with the desires of the majority as a guide. However, there were a few occasions that we did not, and for good reasons. There were even a couple times that I defied the board of directors on a voted issue. Each time I offered my resignation as the price of that defiance. Not once was it accepted, nor was my act of defiance overruled.

Of course it helped that in each case I was proven right in the end. But sometimes you just HAVE to do what is right if you are going to be a real leader. It is one hell of a lot harder than just "well this is what the majority wanted". But oh man, it feels a lot better.

If that is how it is, The officials should be hired as employees, and
vetted for compliance and obedience. Why elect anyone. Simply poll the
constituants, and do exactly what the majority asks.

NCI's *primary* goal is the elimination of Morse testing.

However, the NCI Bylaws, as Rick, W7RT, pointed out, contemplate and allow
for NCI to comment from time to time on issues that would have an effect on
at least a significant part of the membership.

Since the ARRL petition would have an effect on the structure of amateur classes and privileges (both code-related and not) that will likely last for at least a decade (we don't envision the FCC considering major changes for about that long after a major restructuring), the Board felt it necessary to ask the membership for their views.

First we asked, "Should NCI comment on the issues in the ARRL petition other than the code test issue?"
Then, we asked for comment on the other issues point by point.

> But now NCI is coming out in favor of giving most hams priveleges
> that they haven't been tested for.

As outlined by the ARRL, a "one time adjustment" seems the only practical way to clean up the overly complicated license structure that had evolved over the years.

And, as a number of experienced, yet realistic, hams have pointed out, the amount and level of material in the 200-ish page "Now you're talking!" study guide (and on the Tech test) is not all that different from the old General that I took at the FCC's old Long Beach, CA office over 25 years ago.

The fact is that many people mis-remember the tests they took many years ago as being harder than they really were ... I guess that's human nature ... after you get used to something it seems easier (and correspondingly the beginning stages are remembered as harder).

> And there is still that nasty "day after" thing, when th eetsting
> regimin goes up again..... or does it?

The testing regieme doesn't *have* to "go up again" ... NOBODY has proposed that the testing regieme be changed ... only that, in the interest of "nobody loses privileges" (which was a DISASTER in the past), that there be a one-time "adjustment" to make everyone fit the new structure without losing ...

73,
Carl - wk3c

```

Mike,

If it was morally wrong (like killing, etc.) or illegal, no ... of course not.

But the ARRL proposals don't fall into either category, nor do the NCVEC proposals.

NCI's comments state *what our members said they think about the ARRL and NCVEC proposals* ... with the percentages from the surveys.

I believe the surveys were scientifically and statistically sound (and secure):
the response rate was just over 50% - exceptionally good for surveys by virtually any standard
each respondent had an individually assigned unique password, that was sent to them by e-mail (by a "merge" from the member database)
then they were sent an "invitation" from the survey site (same mailing list used) with a unique URL corresponding to their invitation/password
the survey site only allows one response per respondent (and tracks IP addresses to make it easy to do a quick check to see if someone is trying to hack it to "stack the deck"), etc.

So, what is "wrong" with NCI telling the FCC what its members said they think about the ARRL and NCVEC petitions?

Carl - wk3c

| over the years.
|

It's instructive to note that ARRL and NCI, (not FCC) are characterizing the license structure as "overly complicated". With only modest changes, this structure has been extant since 1951, before the age of computerized record keeping and modern database. How come it's suddenly "overly complicated"?

But >>suppose<< for the moment that it IS overly complicated and needs reform... to use a term from another NCI Director, do we need to be "hellbent" to do it in one swell foop? I recall a proposal by one WA6VSE a few years back that would have transformed the structure from it's present state into a 2-class structure in as little as 5 years, with no free passes and with nobody being stripped of privileges. The details escape me, but I'm sure we could Google it up and have a look.

Or if the administrative burden isn't really at FCC but at the VEC's like ARRL and W5YI, well there's another proposal floating about which would overnight limit their testing burden to just two classes. No Morse test to give, and only two written tests. Again, not a soul would get a free pass and not a soul would be stripped of any privilege they now enjoy. You can view that proposal at http://tinyurl.com/wce9

| And, as a number of experienced, yet realistic, hams have pointed out,
the
| amount and level of material in the 200-ish page "Now you're talking!"
study
| guide (and on the Tech test) is not all that different from the old
General
| that I took at the FCC's old Long Beach, CA office over 25 years ago.

We're not talking about 25-years ago. We're talking about today.

>Today< an applicant needs to pass a single 35 question exam to acquire a Technician license.
>Today< an applicant needs to pass a second 35 question exam (which contains material not tested in the Technician exam) to acquire a General license.

The ARRL proposal to waive the second examination for all todays Technicains (about a third of a million) effectively states that todays Technican exam is perfectly adequate for General class privileges. If that is true, then ipso facto we can make the case that forevermore the exam for General need be no more technically demanding than todays fall-off-a-log-easy entry level Technician exam.

Now you and Ed Hare at ARRL can spin-doctor all you wish, but reality doesn't care what you believe.

> > Carl - wa6vse

And, Hans, I don't believe that the ARRL proposals do anything of the sort ... what they propose is a novice test that is more like the novice test of old than today's (more difficult) Tech test as the "entry point" - and to give the holders of that license enough privileges (access to HF) to allow them to be "mainstreamed" and "get a taste of what 'real ham radio' is like," so they'll remain interested and have an incentive to learn and upgrade, rather than becoming bored and dropping out. (I would find it boring if I lived in a place where there were few hams, fewer repeaters, etc. - basically nobody to talk to - and I was restricted to VHF/UHF.)

There is no proposal to reduce the level of difficulty or comprehensiveness of the General or Extra tests.

A majority of NCI's members opposed the NCVEC proposals for "commercial gear only" and "low (<=30V) finals only" for beginners, so it appears that they want (or, more accurately, want beginners to have) the freedom to experiment and tinker - as well as the opportunity to be able to pick up that "first HF rig" as a hamfest special (maybe even a "fixer-upper") that's older, cheaper, and has tube finals ... (and I would have concerns that a "commercial only" limitation could eventually lead to "type acceptance" requirements - which would drive up the cost of gear considerably)

While my personal comments supported the ARRL proposals (except, of course, for the "keep the code test for Extra" part), I also in my *personal* comments opposed those NCVEC proposals ... but if NCI's membership had "voted" the other way in the survey, NCI's comments would have reported the numbers accurately even though *I* would have disagreed.

There is a misperception that NCI members are all "newcomers who want something for nothing" ... in actuallity, I think many, if not most, readers here will be surprised to know the breakdown of how long the NCI members who responded to the survey have been licensed:

Not licensed yet 1.3%
0-1 years 4.7%
1-2 years 7.6%
2-5 years 22.3%
5-10 years 23.6%
10-20 years 30.3%
> 20 years 10.3%

So, over 40% have been licensed for over 10 years, and just barely shy of 2/3 have been licensed for more than 5 years ... with another 22% between 2 and 5 years.

So you can see that we're not exactly "over-run with newbies wanting a freebie ..."

Perhaps ... in the US system it would require a Constitutional amendment and would probably end up being reviewed by the Supreme Court.

> Many times the majority would vote to enact laws that are illegal or
> unconstitutional.

And many times elected officials that "do their own thing" with little regard for their constituent's views vote to enact laws that would trod on the rights and/or sensibilities of their constitutents ... that's another reason we have "checks and balances" like the Supreme Court.

NCI's Board of Directors are like the legislature in a way - elected representatives - NOT the Supreme Court.

> [snip] When I have been in a leadership
> position, I have often polled the membership about their wishes. But it

> reasons.

If it were morally wrong, or illegal, that's one thing ... but NCI's Board of Directors debated the issues and, while there was not 100% agreeement on our personal views we agreed that we should represent our members' views to the FCC and that we could each file our personal comments to voice our personal views.

> There were even a couple times that I defied the board of
> directors on a voted issue. Each time I offered my resignation as the
> price of that defiance. Not once was it accepted, nor was my act of
> defiance overruled.

So your colleagues on that board "gave you a pass" ... how cute.

If I violated my obligations/authority I would expect to be removed from office ... and I would move to remove from office any of my colleagues on the NCI Board of Directors if they violated their obligations/authority.

> Of course it helped that in each case I was proven right in the end.
> But sometimes you just HAVE to do what is right if you are going to be a
> real leader. It is one hell of a lot harder than just "well this is what
> the majority wanted". But oh man, it feels a lot better.

Again ... please note that NCI's comments report what the membership said in the survey (and that these are just initial comments on 4 of 18 outstanding post-WRC-03 petitions - the "main event" will be when the FCC digests those 18 petitions and all of the comments on them and comes out with a Notice of Proposed Rulemaking. I fully expect that NCI will use the services of the survey service again to gather member input on the NPRM ...

Also ... I know that at least some of the ARRL Directors want to know what the majority of their constituents feel on the issues ... and try to vote in a way that represents their constituents.

I see your point, Mike, however in 85% of the cases the elected
representitives are supposed to be doing JUST that..."representing".

Yes, I know there are those times when they must act without taking the
time to get the "pulse" of what thier constituents want...Like responding to an
attack. In those cases I EXPECT them to not wait around. Otherwise, there's
very little reason for them to NOT be able to take SOME time to work with the
constituency.

But when an organization that says it exists *only* to eliminate Element 1 gets involved in areas that have nothing to do with code testing, and uses the "membership wants it" claim, some of us take exception. Particularly when the number of US hams who are current NCI members is not public knowledge.

Of course.

Now imagine that someone polled all US hams about whether or not Element 1 would remain for an HF amateur license. And imagine that the answer was a resounding "YES!".

Would that result be used by NCI?

>In addition to this ill-conceived notion of free upgrades, we have
>looming another proposal for what amounts to an "Applicance Class"

Exactly.

And recall that I was admonished here for discussing certain subjects. Now a variation on those subjects/discussions has become an RM - and NCI *supports* it!

Surreal.

And, like Carl, I 'personally' filed comments supporting the ARRL
petition except for code testing. I supported NCVEC where it
is the same as ARRL, where it ends all code testing...but I
opposed NCVEC on the other points. Cleraly I differ with the
NCI membership on several points as does Carl...and have made
my own comment filing on both petitions.

> So your colleagues on that board "gave you a pass" ... how cute.

If you want to know the details, I was darn near lynched by 4 entire teams parents after a controversial decision by the Board of Directors. This was just about half the entire league and 100 percent of the affected teams. They were going to walk, and that would have wrecked the league. And it was no idle threat. The BOD decision had eliminated half the games they would play, and no reduction of fees.

Quick! What would you do? Do you wreck your league by sticking to the BOD decision, or do you defy it and not lose almost half your teams, which in this case was effectively all the teams, due to league play regulations. My decision was to reverse the BOD's decision, get the parents back in the fold, and quite possibly sacrifice myself in the process.

I can assure you that the situation was neither cute, nor charming. At the time, I was thankful for my formidable physical presence!

It could even be argued that I was listening to my constituents. Even though it was less than half the league, it was 100 percent of the people affected by the decision. But now, who's the majority in that case?

> If I violated my obligations/authority I would expect to be removed from
> office ...

I did. I was willing to accept that.

> and I would move to remove from office any of my colleagues on
> the NCI Board of Directors if they violated their obligations/authority.

A soon as the rest of the BOD saw what happened, they realized their mistake. Most were in fact grateful that I saved their collective kiesters.

So while people can pontificate on constituents and majorities and "What You Have To Do", my experience shows that it *isn't that simple*. Hopefully you won't find yourself in a similar situation. You might find it easier to hide behind the "decision". At least that way you can say "It wasn't my fault".

But we still digress here. My main point in all this is that it seems to me that NCI is growing out if it's previous self defined interest.

And that has really been my bone with the whole process here, Jim.
We're told that they are only here to eliminate Code testing. Now it has
branched out to a free upgrade to most hams. We are toled that on a
personal level, that "I'll" never support a reduction in the written
exams" and now they are here supporting a reduction in the written
exams. And sorry folks, that "one time adjustment" is spin-us maximus.

All this makes for a marked lack of credibility.

That is because you were tipping their hand Jim!

> Surreal.

How about this:

Certain people want to get rid of code testing so badly that they are
willing to do whatever necessary to do this.

Their constituency is largely in the group that will be positively
affected in the free upgrade, or "one time adjustment" if you prefer the
spun version.

Say anything do anything in support of your goal. Truth is so
subjective anyhow.

And now it isn't so surreal, is it?

>affected in the free upgrade, or "one time adjustment" if you prefer the
>spun version.

This has been there main goal all along. Hell most of them cant PASS the
written, let alone CW.
The next move is the good one, if they get there FREE HANDOUTS. Then there is
no reason for a GROUP not to pettion the FCC on behalf of the General
population, and DEMAND that all TESTS be reduced to the LEVEL of the NO-CODE.
If the No-Code Testing is good enough for the present then there is no reason
it shouldnt be good enough for the future. And I will bet you the FCC will go
along with it.

I took the modern tests, from Technician to Extra.

Technician October 1999
General June 2001
Extra Feb 2002

All were at just about the correct level for the privileges conferred,
IMO. I don't think the Technician test is proper preparation for the
General class license.

>
>>And there is still that nasty "day after" thing, when th eetsting

> losing ...

But there is the problem. You either choose to believe (or simply don't care) that the person that takes and passes a Technician test one day before "the adjustment" is not treated differently by the testing process than the person that takes the general test the day after "the adjustment".

While people are grousing about how HARD those tests are, I look at it as giving a royal shaft to the technicians upgraded in this proposal.

It makes for a little awkwardness at the Extra level afterwards, as they will not have taken a General element test.

I know that it's all about getting maximum benefits for minimum input these days, but if a prospective ham asked me, I would suggest that they wait until after "the one time adjustment" to get their license, unless they wanted to go through the ranks quickly and get at least General before the "one time adjustment. Learning and testing is not a bad thing, IMO.

Quick comment, Bill. In the context of what Carl and I were discussing, they pretty much did give me a pass. I deliberately defied a board decision (the background is in another post I just made) for the good of the league, and our groups very existence. I fully expected to be removed from my position.
But as I noted in the post, in the end, most were very grateful I did what I did, as they concluded that thier ruling that I defied was likely a fatal mistake.

> What CAP does today is irrelevent to the topic being discussed.

Yes, it is. The USAF has set a precedent that they don't require
amateur volunteers to operate radios on military frequencies. Do you
disagree?

> And I have proposed changes to the AFMARS system that would allow CAP
> members who have completed "ACUT" (Advanced Communicator User Training) and who
> have demonstrated competency to be allowed to enroll in AFMARS.

Hopefully you didn't include Avon products and hanging upside down
from the shower rod in your proposal.

Now please allow me to have an opinion.

You have a CAP volunteer who now wants to add AFMARS volunteer to
his/her credentials. Then the big disaster occurs and CAP calls him
up for duty. Then AFMARS calls him up for duty. Then RACES calls him
up for duty. Then the ARC calls him up for duty. Then the ER calls
him up for duty. Then home calls and say they need him there.

Choose one (1) emergency service to volunteer for and do it well.
When work calls and says they need you there, you go to work. When
home calls and says they need you there, you go home.

I think some people collect volunteer credentials like some people
collect 10-10 numbers.

> But that is NOT what the rules allow now, and what MIGHT happen in the

I suspect then you'd be unhappy with the General/Tech test given in the latter 50's throught the gos which until 1968 conferred full operating privileges to Generals. The ARRL study guide for General was only 16 pages of material.

Cheers,
Bill K2UNK

Sorry Bert, whereas NCI can look only to its membership
for guidance as to NCI's organizational stance, the FCC can
not simply look ONLY towards the already licensed
amateur community for its input and guidance. In fact,
I know of NO entity that claims total representation
of ONLY the existing licensed body of hams.

Cheers,
Bill K2UNK

Once again there is only one vote that ends up counting - the FCC's. I
would suggest they
may have tipped their hand on this proposal based on the recent NPRM.
In the section on the petition for granting upgrades based on service
they say this.

"Rather, we believe that passing an examination concerning the
operational and technical privileges of a higher class operator license
shows that a licensee qualifies for that license. In this regard, we
note that because current examination questions reflect current
technological advances and operating practices that did not exist twenty
years ago the examinations an examinee must pass today may be more
difficult than the examinations required of licensees in the past. For
these reasons, we deny the petition."

What was said about another petition regarding expanding privileges may
also be pertinent.

" We believe that a Novice or Technician Plus Class licensee can easily
upgrade to the General or Amateur Extra Class, thereby obtaining access
to significantly more spectrum and greatly increasing the chance of
establishing contacts with other amateur radio stations. Additionally,
because the number of Novice and Technician Plus Class licensees has
declined significantly, we believe that we should address operating
privileges for these license classes only in a comprehensive

restructuring of operating privileges for all license classes. "

I don't know. Comparing the relative difficulties is pretty hard. I've tried, and so much has changed between then and now.

I definitely *don't* think the earlier tests were harder. But how much difference is about impossible to quantify.

Yep, and the S-line was top notch gear and is still good equipment. KG6AAY
had considerable Collins equipment in it when I was there in the mid to late
60s.

The degree of difficulty of tests written back in the 50's is immaterial
to todays situation.

Today the General exam requires passing two 35-question written
examinations, and the Technician requires passing only the simpler of
those two exams.

The ARRL proposal, which NCI directors seem hellbent to support, would
waive the second (harder) of the examinations, in effect giving away
"half-price" General licenses to a third of a million licensees. They
attempt, with a straight face, to rationalize this away by how few pages
were in Ed Hare's study material for General 40 or more years ago!
This support, from people like Carl, who previously stood four-square
against any dillution of the technical requirements for amateur
licenses, is unfathomable even when masked by platitudes of his
"fiduciary duty", as though he were appointed to some "guardianship"
responsibility to the amateur service???

Given enough time, they'll come around to my way of thinking. One
amateur radio service, one license.

Thought-experiment:

Suppose the vast majority of your membership said they'd reconsidered.

Suppose they said that 5 wpm for Extra was OK, as proposed by ARRL.

Would NCI support that, or simply expel the heretics?

Also NCVEC.

The ARRL proposal says it is "absolutely necessary" to eliminate
license classes that are not available to new issues (such as the
Advanced) anymore.
Why it is so "absolutely necessary" is not explained.

> With only modest
> changes, this structure has been extant since 1951, before the age of
> computerized record keeping and modern database. How come it's suddenly
> "overly complicated"?

Bingo!

The Advanced class was closed to new issues from the beginning of 1953
to some time in 1967. The FCC kept those folks on the paper database
for all those years, even though an Advanced carried no different
privileges than a General back then.

> We're not talking about 25-years ago. We're talking about today.

Yup.

And remember this fun fact: *anyone* who passed the old Technician
(before March 21, 1987) and can dicument it and now holds a Technician
(or passes the 35 question test for it) can get a no-additional-tests
upgrade to General. Just go to a VE session, present the
documentation, pay the fee and get the upgrade. Even a Tech license
that expired in 1956 is good for Element 1 and Element 3 credit.
>

Does it really require more skill and knowledge to operate on 14.155 vs.
14.326? ;-)

Of course the real reason for the frequency based priv's is that it is
easily identified
what frequency you are operating on at a remote FCC receiving site.

Your point is more valid when comparing techs against general/extras
(VHF vs HF).

As has been cussed and discussed here, ARRL has petitioned FCC to reduce the number of license classes from six down to three, namely Novice, General, and Extra.

If you haven't read the entire petition (it runs somewhere around 35 pages, each page laden with microscopic-print footnotes) you may have missed the fact that there will actually be 5 sub-classes of General.

One-Star General - Post 1987 Technician given a complimentary field promotion to General

Two-Star General - Previous Conditional given humanitarian promotion to General

Three-Star General - Pre 1987 Technician given posthumous promotion to General

Four-Star General - General who took an actual General examination in modern times at a VE session

Five-Star General - General who took an actual General examination in front of a steely eyed FCC official in a noisy drafty government office in downtown Fargo and had to walk uphill (both ways) through 10-foot snowdrifts on Good Friday 1954.

What Mike posted is generally correct.

And nearly anyone who'se anybody in the service has a cell phone on
their hip paid for by you and me. I'd say that the military does
accept cellular telephones as a valuable service daily.

Meanwhile you can call me by name and Mike by name, but we don't know
what to call you.

>> But right now...today...what I stated is true.
>
>Nope, you're "FACTS" are moving targets. You've already backtracked
>on your original statement and now say that 1% of MARS personnel are
>not Amateurs.

OK...here we go again.

Brian, I have ALWAYS stated that there are SOME "non-Amateur" personnel involved in MARS. Most of those are Active Duty Armed Forces. You provided the name of ONE person who is neither Amateur nor ADAF. I will accept that there are probably folks who fall into that same category for N/MC and Army MARS. I still contend that the numbers will be around 1%, certainly no more than 10%.

That means 90% of the load is carried by licensed Amateur Radio operators.

No Amateur Radio = No MARS, that 1-10% notwithstanding.

>> TOMORROW they may require that I be wearing Avon when I operate and
>that I
>> hang from the shower curtain by my ankles.
>>
>> But not today.
>
>They won't. Trust me.
>
>Try to stay away from extremes.

Hey...You're the one who can't/won't accept that MARS existence is directly predicated on the participation of licensed Amateur Radio operators.

You're also the one who has made suggestions about what MARS may or may not be based upon arbitrary rules changes that COULD be enacted SOME time in the future.

Not what >>IS<< in writing...but what MIGHT happen.

That's "extreme".

>> >Comms was not my functional area, but weather comms were. But I will
>> >state for the record that I'd write anything into the plan or opord
>> >that hhq told me to - as long as it was a legal order.
>>
>> Then you were not being honest with yourself or faithful to your sworn
>> oath.
>
>How am I not being honest?

You said you'd write "anything" if it were a "legal order".

Your commanding officer could tell you to write "I am gay" on a blackboard
100 times. That would be a legal order. Would you do it, knowing it wasn't
true? (Or is it?)

>> Yes, 99.999% of the time I am sure no one would ask you to write dumb
>> stuff.
>
>Lots of dumb stuff is written here. Arguing minutia over and over and
>over is what Carl commented on.

I am impressed that several people express angst over "arguing minutia",
but usually what THEY consider "minutia" is inversely proportional to whether
they find it important to themselves...Not what others consider important.

I, for one, do not consider your assertion of "significant role" in the
use of unlicensed radio services in emergency communications, to be valid, well
founded, nor even wise. You, however, considered it "minutia", no doubt due to
the fact taht it was an indefensible idea.

>> >I suspect that MARS, if need be, could find volunteers who didn't have
>> >amateur licenses. Isn't that what CAP does? Doesn't CAP use radios
>> >on military frequencies?
>>
>> What CAP does today is irrelevent to the topic being discussed.
>
>Yes, it is. The USAF has set a precedent that they don't require
>amateur volunteers to operate radios on military frequencies. Do you
>disagree?

Yes, I do. (Disagree)

CAP is NOT MARS. It never was. It NEVER required Amateur licensure in
order to participate. CAP has encouraged Amateurs to participate, and
encourages it's members to consider being licensed. However they are also very
adamant that CAP operators not use Amateur frequencies for CAP business, and
"Amateur-like" communications not be conducted on CAP frequencies.

Apples and oranges, Brian.

>> And I have proposed changes to the AFMARS system that would allow CAP

>his/her credentials. Then the big disaster occurs and CAP calls him
>up for duty. Then AFMARS calls him up for duty. Then RACES calls him
>up for duty. Then the ARC calls him up for duty. Then the ER calls
>him up for duty. Then home calls and say they need him there.
>
>Choose one (1) emergency service to volunteer for and do it well.
>When work calls and says they need you there, you go to work. When
>home calls and says they need you there, you go home.

I am sure you have a point to make, Brian, but I think the point is that
you're jealous that others are capable of being/doing more than one thing.

If you're a one-thing-at-a-time kinda guy, that's fine. There's nothing
to be ashamed of. Lot's of people can't handle more than one thing at a
time...Or one thing at all...

>I think some people collect volunteer credentials like some people
>collect 10-10 numbers.

Like I said...If you're a OTAAT kinda guy, that's fine.

Some of us realize that there's only one pass at life and a lot of things
to do and experience.

I like to do a lot of things. I may never "master" any of them, but I
will have done them and been made better for it. And in some cases my having
DONE them has made things better for others.

That's the icing on the cake.

>> But that is NOT what the rules allow now, and what MIGHT happen in the
>> future is irrelevent NOW.
>
>If future rules are irrelevant, why do you propose changes?

They are irrelevent at this moment. They may not be tomorrow. Can I hold
you accountable TODAY for a yet-to-be enacted law...?!?!

>> >MARS is >>>NOT<<< "Amateur Radio."
>> >
>> >Best of Luck, and last this subject.
>>
>> No Amateur Radio = No MARS.
>
>MARS is >>>NOT<<< "Amateur Radio."

No Amateur Radio = No MARS.

It really is THAT simple.

What extremism...?!?!

Your suggestion of "one license fits all" is the very epitome of
socialism, Brian.

Again I ask you, Socialist or Marxist?

The withering of the soul due to the numbinginly cold and apathetic "one
size fits all" socialist state was at the very heart of the fall of the Soviet
Union, Brian...or weren't you paying attention to social issues in the
80's...?!?!

Sheeesh...

Steve, K4YZ

I don't think they do either, but the intent was not war fighting, but
disaster comms in the USA. I suggest that the cell phone is the best
thing that non-amateurs have going for them. See the long line of
jabs from JJ and cronies.

But
> cell phones

Yup. And probably some not so routine stuff.

> Or at the pentagon. But not up in the mountians of Afghanastan or
> Iraqastan....

Deliberate and Contingency planning is done in the USA.

Alert notification is done using unsecure comms, including cellular
telephones.

Nobody was talking Afghanastan.

It is interesting that NCI folks avoid such a simple, direct question.

> Me thinks Jim has too much idle time on his hands :-)

It took only a few seconds to write that post. Far more has been spent
by NCI folks trying to justify their support of free upgrades for
Techs after at least one said they would *never* support reductions in
the written requirements.

Hans, K0HB has described the situation plainly and clearly.

As for my thought-experiment being "silly" - that's exactly what many
of us were told about possible reductions in written test standards.

Here's another thought-experiment:

Suppose that, in order to break the logjam, someone proposes that the lower 15-20% of each MF/HF ham band be made manual-CW-only. And a 5 wpm code test would be required to use those segments.

And suppose the majority of NCI members said "Fine! The code folks will have their protected spots and the rest of us won't have to deal with code unless we want to, and we can disband NCI and move on."

What would NCI's leadership do?

> We're told that they are only here to eliminate Code testing.

Please note that the "only to eliminate code TESTING" was to clarify that
NCI had no goal of eliminating code USE on a voluntary basis.

We never said we would "never" comment on other issues of interest to our
membership and our bylaws specifically provide for doing so.

> Now it has
> branched out to a free upgrade to most hams. We are toled that on a
> personal level, that "I'll" never support a reduction in the written
> exams" and now they are here supporting a reduction in the written

> exams. And sorry folks, that "one time adjustment" is spin-us maximus.

Sorry ... but that's BS ... there is NO proposal to change the written exams for General/Extra ... the proposal is to create a new entry level class with testing similar to the old Novice tests that all of us "old-timers" started out with ...

I don't see what's "bad" or "inappropriate" about that ... I agree with ARRL that to stimulate growth (or even to keep up with dropouts and SKs) that we need a new entry class with meaningful, mainstream privileges that will be interesting enough to bring in newbies (especially kids) and KEEP them interested in learning and progressing.

NCI's membership also agrees with that by an overwhelming majority.

We have filed our comments - if you have filed yours, YMMV ... that's why the FCC seeks comments - to see what people think.

I don't understand the implication that NCI should somehow "not be allowed to" file comments - or why doing so is so frowned on.

Carl - wk3c

> waive the second (harder) of the examinations, in effect giving away
> "half-price" General licenses to a third of a million licensees.

I would suggest that "relevant" might be substituted for "harder",
Hans. While the giveaway goons whine about how hard the test is or
isn't, The fact is that the general test tests for knowledge that is
relevant to hf operation.

So in the great giveaway, people will be given access to HF without
some of the necessary knowledge.

Is that fair to them?

Fact: None of the tests are that hard. All it takes is some study.

Fact: the tests aren't necessarily supposed to be hard. They are to
show that a person is prepared to exercise the privileges gained by
passing the test.

Fact: the "one time adjustment" hams, now a majority of hams, will not
have been prepared properly for their HF access.

Opinion: It is one heck of a disservice we are doing for them.

> They
> attempt, with a straight face, to rationalize this away by how few pages
> were in Ed Hare's study material for General 40 or more years ago!

I don't care about Ed's test.

Brian,

Just as a matter of interest, the USSR (Socialist) had 4 classes
of license. Hmmmmm, maybe they weren't Socialist after all?

Hans,

This appears to reflect what is going on in society in general. The company I worked for had various apprenticeships - one was for automation. It was a four year apprenticeship. Today, the same apprenticeship is three years in duration - plus you end up with an *associate's degree*! I would tend to question whether an individual actually learned more in three years to deserve that degree or not, but the fact remains that the 3 year graduate is now qualified to go into many other fields as a technician whilst the 4 year graduate is not.

If an 8 year old can pass the extra exam (itself pretty much a cakewalk today), why the necessity of a field promotion for someone that didn't take all of the theory elements for a general?

Meanwhile, back in Rochester, NY, I went to one of those fast food outlets about a month ago. The cash register operator took my $20.00 (the bill was something like $11.83), hit a button, and - the look on her face told me she punched a button which told the machine I gave her $11.83. She took a five out of the register .... slowly took a single .... then after frowning for several seconds, another single .... then she had to get the manager to make change. Heck, if she learns to add and subtract, maybe they'll grandfather her to a bachelor's degree ;)

All in all, it is frightening to see newly minted extras asking such questions as "I have an SWR of 2 to 1. What can I do to lower it?".

We'll see more replays of such things as happened on Guam "sparkplug1 this is sparkplug. You are loud, but garbbled." - hey guys, take out the antenna and stick a coat hanger in the antenna jack. Either that, or lower the rf gain :)) But they were the experts, right?

I think Rochester had a one time upgrade of second graders to HS
diplomas a while back, didn't they?

> All in all, it is frightening to see newly minted extras asking such
> questions as "I have an SWR of 2 to 1. What can I do to lower it?".

I know what you mean. All they have to do is take the face off of the
meter, and manually push the needle down. If their meter uses LED's,
they can put tape over the offending lights.

Were they actually Extra's? The SWR thing I can almost see, if a person
is inexperienced, and considering the religious like pursuit of 1:1 SWR.

But what you describe after that is pretty dum for shure!

```

You mean like commenting *against* the proposed subbands on VHF for
modes narrower than 3 kHz some years back?

And despite having high confidence in how WRC-03 would affect S25,
NCI's proposal consisted of just one action item: drop Element 1.

> > Now it has
> > branched out to a free upgrade to most hams. We are toled that on a
> > personal level, that "I'll" never support a reduction in the written

>
> Sorry ... but that's BS ...

Which part?

> there is NO proposal to change the written exams
> for General/Extra ...

Not directly.

However, if the proposal goes through, we will have a situation where
the majority of Generals have never passed the *written* test for
General. Plus about 40% of Extras never passing the written test for
that class.

You can say that the standards have not been lowered, but in effect
they have. If the proposal goes through, those who paid "list price"
for their General licenses (in terms of written tests) will be in the
minority.

It's like saying that the standard marathon distance of 26.22 miles is
"too long", so we're going to allow anyone who has run a 13.11 mile
half-marathon before a certain date to claim they are a "marathoner".
Then we will abolish the half-marathon and any new runner who wants to
be called a marathoner will have to run 26.22 miles to earn the title.

How do you think that would go over? As a runner with 23 years'
experience and 2 marathons I can tell you it wouldn't be very popular
among those who had actually run marathons.

Or better yet - how about this:

Enact a new 2 class license system.

Two license classes: Basic and Full.

Basic has a simple written test and Full has a much more comprehensive
written test.

Privileges coincide with the tests in many ways. Basic is a limited
"learner's permit" license, Full is all amateur privileges.

Everyone who has a US ham license before Date X get Full licenses.
After Date X, the new system takes over and newbies have to pass the
new Basic and Full tests.

Would that be a good system? Why or why not?

> the proposal is to create a new entry level class with
> testing similar to the old Novice tests that all of us "old-timers" started
> out with ...

Yup. Simple written test, 5 wpm sending and receiving code tests, even
the same name as in the old days. Got me started.

> I don't see what's "bad" or "inappropriate" about that ...

Yet it was not proposed by NCI.

> I agree with ARRL
> that to stimulate growth (or even to keep up with dropouts and SKs) that we
> need a new entry class with meaningful, mainstream privileges that will be
> interesting enough to bring in newbies (especially kids) and KEEP them
> interested in learning and progressing.

Morse Code is mainstream in amateur radio.

Kids aren't put off by code tests *or* written tests, in my
experience. And I do have a bit of experience in that area....

> NCI's membership also agrees with that by an overwhelming majority.

Sure. But that part of the ARRL proposal isn't the problem. And if the
majority of NCI members support NCVEC's "appliance operator" class,
and their "copy of Part 97" idea, will NCI support that, too?
>
> We have filed our comments - if you have filed yours, YMMV ... that's why
> the FCC seeks comments - to see what people think.

Some of us think the free upgrades are a very bad idea.
>
> I don't understand the implication that NCI should somehow "not be allowed
> to" file comments - or why doing so is so frowned on.

Nobody I know says anyone should not be allowed to comment. The
frowning is about the support for lowering of *written* test
standards, which some folks claimed they would *never* support.

ARRL sez in their proposal that it is "absolutely necessary" to get
rid of license classes that are no longer issued to new applicants.
IOW, we *must* get down to three license classes no matter what it
takes.

The big question: Why is it "absolutely necessary"? FCC maintained the
Advanced for almost 14 years, in the days of paper records. They have
maintained the Novice, Tech Plus and Advanced for over 4 years now.
What's the problem? Who is being burdened or hurt?

See below.

> At 5WPM. If
> you took and passed 13 or 20 and didn't do 5 I heard that you would not
> get credit for Element 1.

That part is true - you have to have passed 5 wpm to get Element 1
credit.

Quoting Part 97:

ï¿½97.505 Element credit.

(a) The administering VEs must give credit as specified below to an
examinee
holding any of the following license grants or license documents:

(1) An unexpired (or expired but within the grace period for renewal)
FCC-granted Advanced Class operator license grant: Elements 1, 2, and
3.

(2) An unexpired (or expired but within the grace period for renewal)
FCC-granted General Class operator license grant: Elements 1, 2, and
3.

(3) An unexpired (or expired but within the grace period for renewal)
FCC-granted Technician Plus Class operator (including a Technician
Class
operator license granted before February 14, 1991) license grant:
Elements 1
and 2.

(4) An unexpired (or expired but within the grace period for renewal)
FCC-granted Technician Class operator license grant: Element 2.

(5) An unexpired (or expired) FCC-granted Novice Class operator
license grant:

Element 1.

(6) A CSCE: Each element the CSCE indicates the examinee passed within the
previous 365 days.

(7) An unexpired (or expired less than 5 years) FCC-issued commercial
radiotelegraph operator license or permit: Element 1.

(8) An expired FCC-issued Technician Class operator license document granted
before March 21, 1987: Element 3.

(9) An expired or unexpired FCC-issued Technician Class operator license
document granted before February 14, 1991: Element 1.

(b) No examination credit, except as herein provided, shall be allowed on the
basis of holding or having held any other license grant or document.

(End of Part 97 quote)

Note that an old expired Tech can be good for Element and 3,
(97.505/8) and an old expired Novice or Tech can be good for Element
1. (97.505/9). So anyone who ever held a Tech before March 21, 1987
and can document it need only pass Element 2 to get a General.

Consider these scenarios:

Expired Novice or Tech-with-code licenses are good for Element 1, but other
expired-beyond-the-grace-period licenses are not. So someone who held a Novice
53 years ago and let it expire gets Element 1 credit, but someone who held an
Extra and let it expire 732 days ago gets no credit. Similar for Technician.

In similar fashion, an expired Tech from before March 21, 1987 is worth Element
3, but not Element 2! Also, no other expired-beyond-the-grace-period license is
worth written element credit.

But them's the rules.

On average, most Generals will have been tested at the Technician
level. I'll entertain anyone's attempt to say that the average testing
level has not gone down.

I don't see why this is such a hard message to get through! I don't
care if NCI supports giving dogs ham licenses, I don't agree, but I
don't care.

I do care about integrity.

I don't even care if people change their mind. I've done it in the
past, and if I was wrong, I said so, and if I just got more data, I said
that too.

But I don't care for spinning a story to make it seem as if a
contradiction was indeed, not a contradiction.

And they can say whatever disparaging comments about my argument that
they like. It only convinces me that I have hit a nerve.

> What's the problem? Who is being burdened or hurt?

Occam's razor says that ARRL sees that few Technicians belong to the
organization, so they rationalize that if we change that so that most
hams have HF access, more will join. Simplest answer, likeliest answer.

But we so seldom approach things directly.

No, I was referring to your assertion that we were supporting a reduction in
the written exams and the "spin-us maximus" stuff. I don't believe that's
an accurate characterization of the ARRL's proposal or NCI's comments to the
FCC or my comments here.

> > experience. And I do have a bit of experience in that area....

You must know different kids than I do ... the vast majority of the ones I know couldn't give a rat's backside about learning or using Morse. However, geting on HF and talking around the world, experimenting with (and maybe developing) some new sound card digital modes (ever notice how many kids are computer wizzes?) would appeal to them and keep them interested.

Read the numbers ... the majority of NCI members did NOT support either the "commercial gear only for newbies" or the "low voltage finals only for newbies" proposals from NCVEC - that implies pretty clearly to me that they want newbies to be able to tinker, build, modify, and experiment, just as did the Novices of our beginning days ...

As far as the NCVEC proposal that applicants be required to certify that they have read and understand the Part 97 rules, most felt that was reasonable, and so do I. However, the way the question was worded (mea culpa), it doesn't indicate that that would be a substitute for at least some rules and regs questions on the written test - just "should folks certify that they understand the rules."

If you read my *personal* comments, I state what *I* believe (and what I *honestly* believe in my own heart that most of NCI's members meant and thought they were answering on that survey question) - that the certification is OK, but that "... however, it should NOT be viewed as a replacement for reasonable testing on the basic rules and regulations as a part of the examination requirement for licensure."

Again, it is not "support for lowering of *written* test standards" ... other than introducing an appropriate test like the Novice test of old for beginners, I see no "lowering of written test standards" - the General and Extra tests would remain the same. And I would oppose weakening them.

However, for a "one shot adjustment" to align the current licensees with the new structure proposed, I personally don't have a problem with the ARRL proposal.

I think it's the only way to avoid the fiasco that occured 50-some years ago when folks lost privileges ... you know about that, and I'm sure you're aware that there are still some folks around who are very bitter about it.

> I don't see why this is such a hard message to get through! I don't

> don't care.

I understand ... we disagree (just don't start claiming that NCI supports giving dogs ham licenses :-)

> I do care about integrity.

Me, too ... that's why I felt compelled to represent the views of NCI's membership.

If you read NCI's comments, you will see that we essentially "report" the membership's views to the FCC ... views that were overwhelmingly in favor of the ARRL proposal (except for the "code for Extra" part, of course, which wasn't even on the table - that view is a given, due to the nature and basic purpose of NCI.

If you look at the treatment of the NCVEC proposals, you will find that, since the numbers were more mixed, our comments do even more "reporting" of the numbers and take less of a firm position, since we did not have such an overwhelming mandate from the membership.

Hold on Carl. You are putting Jim's and my posts together here. (at
least I think) I support Morse code testing. But if it goes away, I
doubt I'll miss a minute of sleep.

But I don't think that the tested requirements for General are
irrelevant or unnecessary, etc. I think you were talking about element
one instead of the writtens?

> [snip]

I support a system that is basically like what we have now. Only
difference is that Morse code is not tested for AT ALL. I would think
NCI would prefer a system like that instead of one in which there is
still a test for Extra. No one loses *anything at all*. No one gains.
And if the Technicians want to upgrade to General, they will now have
the ability to take the General test without Element one.

Now this does not address the problem of the different classes. I could
be convinced that that there is the need to change the classes. I would
ask for some solid evidence of the difficulties that people are going
through with the present system. But I really don't think that people
are having such difficulties.

I keep a database that has numbers assigned to parts that are 50 years
old. Those numbers aren't used any more, and in fact are assigned new
names. But the old names are still there. It isn't a problem at all, and
in fact would be more trouble to change than it is to just let it alone.

No, Mike ..

I hate to tell you this, but those were USN radiomen who had "all knobs to the right". This is usually caused by such things as when I was in RM "a" school and we were given a printed page stating that a class A amplifier was 50% efficient. One did not question the chief.

Such stuff has propogated into industry where might makes right. The manager may often be wrong, but never in doubt. It is such stuff that leads to companies being cleaned out by upper management. Number two in command must tread carefully against number one (or the CEO) or he/she may be out. Oh well ... it probably doesn't matter as we've got plenty of cellphones anyways ;)

Let me 'splain it to you Steve.

In Socialism, there are two license classes. A class for the masses,
and a class for the governmental elitists.

In Marxism, there is one license class. A class for the governmental
elitists.

and 10% of all MARS personnel are not amateurs?

Do I hear between 10% and 25%?

Going once, going twice...

Can you say, "moving target?"

>
> OK...here we go again.

No, Steve. There >>>YOU<<< go again.

> Brian, I have ALWAYS stated that there are SOME "non-Amateur" personnel
> involved in MARS.

You absolutely have >>>NOT<<<.

This is what you stated: " Sorry Hans, MARS >>IS<< "Amateur Radio".
"

Must I define " >>>IS<<< " for you?

Not only aren't all MARS personnel not amateur radio operators, but
MARS is >>>NOT<<< Amateur Radio.

> Most of those are Active Duty Armed Forces.

And so you start modifying your position.

At first, " Sorry Hans, MARS >>IS<< "Amateur Radio". "

Then, you allowed for active duty personnel.

You provided
> the name of ONE person who is neither Amateur nor ADAF.

It only takes >>>ONE<<< to make your equation false.

I will accept that
> there are probably folks who fall into that same category for N/MC and Army

> MARS.

It matters not that you accept it. As a matter of fact, the more you
modify your nonsense statement that " Sorry Hans, MARS >>IS<<
"Amateur Radio". ," the closer you come to the truth.

> I still contend that the numbers will be around 1%, certainly no more
> than 10%.

Yet another modification. Congrats.

> That means 90% of the load is carried by licensed Amateur Radio operators.

If you say so. I'm losing interest.

Let me know when you accept that your statement was false.

3223. The Pool (Update)

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-26 22:30:28 UTC
From: N2EY@AOL.COM

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that seven predicted dates, including my own prediction, are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
K0HB: January 1, 3000

Closest date (before or after) wins. Anyone else?

73 de Jim, N2EY

The one part of the ARRL proposal that NCI opposes is the "keep the Morse
test for Extra" part.

This article from the Star Tribune has been sent to you by K0HB.

BYLINE: Peg Meier

CREDITLINE: Star Tribune

HEADLINE: Minnesotans dot, dash down memory lane

Morse code is a dying language, but it's not click-clacking its way to the grave unnoticed.

Some of the last of the Minnesota men who can communicate in dots and dashes gathered Saturday to celebrate the birthday of Samuel F.B. Morse, the man who invented the telegraph and developed the code. He was born in Massachusetts on April 27, 1791 -- 213 years ago today.

Since 1944, Morse Telegraph Club chapters nationwide have met on the last Saturday in April to honor Morse. The Twin Cities group even had a birthday cake for him, with a "Happy birthday Sam" inscription in English and Morse code.

The other reason for members getting together was sharing stories about their former careers as telegraph operators.

Such as this one from Bert Miner of Cottage Grove. (You have to understand that experienced telegraphers could tell which colleague was sending a telegraph, just by the rhythm of the clicks.) One frigid winter day, Miner sent a message to a telegrapher in Fargo: "It doesn't sound like you." The response: "That's because I'm telegraphing with my mittens on."

A few decades ago, the Twin Cities chapter alone pulled in more than 100 people for the Morse birthday party, and so did other chapters around the state. This year, the state's only gathering was at the Pavek Museum of Broadcasting in St. Louis Park and attracted just 14 men, most of whom had been telegraphers for railroads, and a few wives and significant others. So few people today are proficient in Morse code that they relish being together.

"This stuff is dead, I mean dead, except for us kids who play with it," said Bob Branchaud, 79, also from Cottage Grove. He's been the club's president since 1968.

Any regrets that their code is on its way out?

"Oh, my," Branchaud said. "The technology is interesting, but, no, it's gone. Now we think e-mail is super fast and wonderful. That's what people thought about the telegraph and Morse code more than 100 years ago. Things change. That's progress."

Branchaud learned the code at age 16, and it provided him the groundwork for a fabulous job -- "never a bad day." He went to work for Western Union in Aberdeen, S.D., in 1946. By 1951, he was with the Great Northern Railway, working first with telegraphy and then with data processing.

Now he's retired, and his home office is filled with a collection of old technology, including telegraph equipment. But even his grandkids show no particular interest.

Memories live on

Stories flew Saturday. Gary Braasch, 64, of Brooklyn Center, told about the telegrapher so entranced with his job that he installed a telegraph key next to his bed. What was music to his ears drove his wife nuts. She moved into another bedroom.

Boyd Ferrell, 67, of Black Duck, Minn., remembered that new telegraphers were rotated to various stations to relieve employees on vacation. In his first two years, he moved 64 times and never got his suitcase unpacked. He remembers sitting under the bridge in Burlington, Iowa, "bawling night after night because I was so lonely."

Yet Lee Mills, 81, of Brooklyn Center, the club's vice president, brought along the cover of an old Railroad Magazine that pictured an adoring woman gazing at a handsome telegraph operator. "Ours was a pretty good-paying job in a small town, and the girls wouldn't mind looking up a new agent," Mills said. He spent 42 years with the Great Northern railroad and reports that the living standard shrank with time: "Eisenhower got in, and the working man didn't do too good after that."

Some telegraph operators were almost lyrical in their transmissions, and others "you'd swear were sending with their left feet," Branchaud said. The men all had stories about how hard it sometimes was for a receiving operator to tell the difference among an "h" (four dots), a p (five dots) and the number 6 (6 dots) as wired by a sloppy sender.

Mistakes survive in memories. There's one about the florist who sent a telegram ordering flowers for a funeral with a card reading, "Lord, she is thine." It came through as "Lord, she is thin."

With practice, telegraphers stopped hearing individual dots and dashes; their brains processed them as words. And once they knew Morse code, it was with them forever, the men said. For fun, Branchaud brought a tape recording of Morse code transmissions.

The table where it was clicking away became the center of the party.

It was in the 1830s that Morse invented the telegraph, which means "far writing." He was already one of America's leading portrait painters. If he had be able to build an electric telegraph sooner, he might have gotten home in time for his wife's funeral. She died at home in Connecticut in 1825 when he was in Washington, D.C., seeking lucrative commissions. The two cities were four travel days away, and word of her illness didn't reach him in time.

Seven years later, he was returning from Europe, where he studied painting for years, and he took part in a shipboard discussion of the new electro-magnet. If electric current could pass almost instantaneously over a wire, as one of the speakers maintained, Morse reasoned that it could be interrupted to produce signals. This was the beginning of the idea for his code. He built his first telegraph instruments at New York University, where he taught art.

After years of struggle, Morse and a partner got congressional funding to finance the first telegraph line, from Washington to Baltimore. On May 24, 1844, a small group gathered in a Supreme Court chamber in the Capitol to watch him send a message to a railroad station in Baltimore, 40 miles away. The message was the biblical phrase, "What hath God wrought?" Those four words were said to change the world.

After that success, Morse and associates were able to raise money to extend the line to Philadelphia and New York City. Eventually, telegraph wires went to every little hamlet in the nation.

Telegraph agents were the first to record news of war, birth, death, marriages, everyday business, million-dollar deals and plaintive appeals for bus fare home. To the outside world, it seemed miraculous that messages could be sent at the speed of 20 or 30 words a minute. With time, telegraph operators used more abbreviations and could get even more than 50 words a minute.

Branchaud said the Morse code was at its peak after World War I, when press associations were still sending stories by telegraph. Baseball games were telegraphed play-by-play (Branchaud himself relayed some games) until radio broadcast games after World War II. In the late 1950s, more than 800 telegraph stations were in place along rail lines in Minnesota, with twice that many operators.

The electronics industry has changed rapidly, Branchaud said, but he and his buddies sure had fun while the code was king. As Ernie Olson of Brooklyn Center said in his prayer before their lunch Saturday, "Heavenly Father, thank you for the privilege of being

telegraphers."

It doesn't take a jaundiced eye to see that you have a poor grasp on a
great many things, Brian.

>> Do you NEED a specific number, Brian? I am sure we can come up with
>one,
>> and I am sure that no matter what, it will STILL be under 10% regardless...
>
>Great!
>
>First you've gone from none to 1%. Now you're saying that between 1%
>and 10% of all MARS personnel are not amateurs?
>
>Do I hear between 10% and 25%?
>
>Going once, going twice...
>
>Can you say, "moving target?"

I can say that even if it WAS 25%, it would still mean that AMATEUR RADIO
was responsible for the other 75%, and that if they decided to stop being in
MARS all at once, there'd be no MARS.

Besides, Brian, you forget where I received my Marksmanship Training. A
"moving target" is a no brainer. Sorry that you are having such difficulty.

>> And without Amateur Radio MARS is...what...?!?!
>
>Aha! Another slippery fella who needs to have "IS" defined.

That "slippery fella" would be you, Brian. It seems you have very little real awareness of what the program is about.

>> >I have a scouting campout the weekend of the Hamvention.
>>
>> I am sure you do.
>
>Just stay away from me wherever I happen to be.

No problem, Brian.

You have said that people should do one thing well.

It appears yours is shrinking from the truth and hiding behind middle school boys.

I see...Once someone says "something", it is absolute and non-amendable.

You ARE an idiot, Burke.

>At first, " Sorry Hans, MARS >>IS<< "Amateur Radio". "
>
>Then, you allowed for active duty personnel.

I have said that long before this, Brian. Please get your stories straight.

> You provided
>> the name of ONE person who is neither Amateur nor ADAF.
>
>It only takes >>>ONE<<< to make your equation false.

What equation?

That over 90% of the membership of MARS are licensed Amateurs?

That at any given moment the program is WHOLLY depenedent on those
AMATEURS...?

You can beleive that if you want to, but it will make you look pretty
idiotic, Brian

> I will accept that
>> there are probably folks who fall into that same category for N/MC and Army
>> MARS.
>
>It matters not that you accept it. As a matter of fact, the more you

I haven't pigeon-holed anything.

I asked you a question about your views which I said are the "epitome" of
socialism. You then decried it as "extremist" and got very defensive rather
than explain why you think this "one licnese fits all" idea would work.

I can tell you in ONE sentence why it WOULDN'T...It wouldn't fulfil the
requirements of Part 97.1, Basis and Purpose.

>Because you're not happy enough to call me a Socialist, you've got to
>call me a Marxist, too!
>
>Did I say that you tend toward extremes?

I asked you a question which you've chose to become argumentive about
rather than discuss like a man.

Your problem, Brian, not mine.

You COULD have just explained your position...Instead you resorted to
Sandlot 101.

Teach that in the Scouts, do you? I am sure you are the milestone against
which leaders are hallmarked.

>Let me 'splain it to you Steve.
>
>In Socialism, there are two license classes. A class for the masses,
>and a class for the governmental elitists.

>
>In Marxism, there is one license class. A class for the governmental
>elitists.

And you are which...?!?! (Do I need to ask a FOURTH time...????)

You are free to have your own views/proposals. I didn't say they were BS
... I was ONLY talking about the assertion that NCI was "supporting a
reduction in written test requirements" and your "spin" comments.

Idly musing, I thought of this a few moments ago. It isn't a CW testing question, but is related by being a CW operating question.

With the likely demise of Morse code testing, is there any reason to have contests give double the points for Morse code contacts?

While of course all contest rules are inherently arbitrary, does it make sense to have one mode of contact be "more equal" than others?

Put another way, if you think that CW contacts should be worth double points, is it fair to have say, PSK31 contacts worth the same double points such as in Field day? Our GOTA station racked up a fair number of points operating PSK31, and it was certainly no more difficult than operating Phone.

I've seen a number of cases where a phone operator has worked hard and logged a lot of QSO's, only to be beaten by a CW op with little more than half that number.

But do you think my proposal will work? We have a number of years of operation under such a system, and I have not heard of any problems with the database administration of the orphan licensees.

Subject: [TCDXA-list] BPL Comments of President Bush im
Minneapolis on April 26th

The following is from the President's speech in Minneapolis on
April 26, 2004. Note the last line of paragraph four.
Particularly note the comment "(s)o technical standards need to
be changed to encourage that."

"Now, the use of broadband has tripled since 2000 from 7 million
subscriber lines to 24 million. That's good. But that's way short
of the goal for 2007. And so -- by the way, we rank 10th amongst
the industrialized world in broadband technology and its
availability. That's not good enough for America. Tenth is 10
spots too low as far as I'm concerned. (Applause.)

Broadband technology must be affordable. In order to make sure it
gets spread to all corners of the country, it must be affordable.
We must not tax broadband access. If you want broadband access
throughout the society, Congress must ban taxes on access.
(Applause.)

Secondly, a proper role for the government is to clear regulatory
hurdles so those who are going to make investments do so.
Broadband is going to spread because it's going to make sense for
private sector companies to spread it so long as the regulatory
burden is reduced -- in other words, so long as policy at the
government level encourages people to invest, not discourages
investment.

And so here are some smart things to do: One, increase access to
federal land for fiberoptic cables and transmission towers. That
makes sense. As you're trying to get broadband spread throughout
the company, make sure it's easy to build across federal lands.
One sure way to hold things up is that the federal lands say, you
can't build on us. So how is some guy in remote Wyoming going to

get any broadband technology? Regulatory policy has got to be wise and smart as we encourage the spread of this important technology. There needs to be technical standards to make possible new broadband technologies, such as the use of high-speed communication directly over power lines. Power lines were for electricity; power lines can be used for broadband technology. So the technical standards need to be changed to encourage that.

And we need to open up more federally controlled wireless spectrum to auction in free public use, to make wireless broadband more accessible, reliable, and affordable. Listen, one of the technologies that's coming is wireless. And if you're living out in -- I should -- I was going to say Crawford, Texas, but it's not -- maybe not nearly as remote. (Laughter.) How about Terlingua, Texas? There's not a lot of wires out there. But wireless technology is going to change all that so long as government policy makes sense.

And we're going to continue to support the Federal Communications Commission. Michael Powell -- Chairman Michael Powell, under his leadership, his decision to eliminate burdensome regulations on new broadband networks availability to homes. In other words, clearing out the underbrush of regulation, and we'll get the spread of broadband technology, and America will be better for it. (Applause.) "

I thought you would be interested. Perhaps you might think about expressing your views on the BPL issue to President Bush. You may want to check the ARRL Website on this. I expect Jim Haynie will be sending a letter to President Bush on behalf of ARRL. The mail and email address for the President should be available on the Web page.

73,

Jay Bellows, KQB

Yes, the technical standards need to be changed to allow BPL: require all power lines to be shielded.

Alan AB2OS

On 04/27/04 10:07 am Kï¿½HB put fingers to keyboard and launched the following message into cyberspace:

A friend of mine, K0TO, said If this wasn't the same Man who declared that he was going to start a program to go to Mars, the he was going to build an anti-missile system, that he was going to..... he would be more worried. It is an election year(has been for more than 36 months) and the objective is to promise everything and anything in a way the makes some other group of people responsible for its failure, not you. [This is political party independent by the way -- all of them utilize the same methodology].

Sure...why not? It requires some REAL skill to do. In this regard, as in any other pursuit in life, greater skill should be rewarded.

> While of course all contest rules are inherently arbitrary, does it
>make sense to have one mode of contact be "more equal" than others?

Not "more equal"...Just better compensation.

As a Nurse with my experience, credentials and skills, I expect to be compensated accordiningly. So why not be "compensated" in a contest that required using honed skills, too...?!?!

> Put another way, if you think that CW contacts should be worth double

True it does take some skill. But if we use Field day as an example,
there is so much else going on that I find it hard to make special
compensations for certain modes.

I would make an exception for "demonstration modes" such as the lesser
used modes such as sat ops, feld-hell, etc. I'd use these as multipliers
though.

We had a kid come on and operate psk31 almost immediately. It was amazing. I had picked it up quickly, but I did some reading beforehand. This young fellow was operating like a pro in no time. In fact, I'm modifying the setup for next year to allow more of the PSK frequencies for the GOTA. The kid was transfixed, and sat patiently working 14.070 until he had worked the band clean.

Just seems like the ones I participate in give double for the CW. I'll need to look some more.

That's my point! Almsot anyone can do it. So why give it par-level
scoring with Morse Code?

> Just seems like the ones I participate in give double for the CW. I'll

I am contemplating a trip to VO1 for Sweepstakes this year. I had hoped
to go last year but a family emergency canx'd that idea. Not sure if I will go
for CW or SSB weekend, tho...Can't swing both!

How is the presence or absence of Morse code testing related to the
point multiplier for Morse code contacts? They're orthogonal, as far
as I can tell.

Mike> While of course all contest rules are inherently arbitrary, does
Mike> it make sense to have one mode of contact be "more equal" than
Mike> others?

Yes, in my humble opinion. It's harder (at least for me and many of
my ham friends) to make contacts via CW, so those should be worth more
points.

Mike> Put another way, if you think that CW contacts should be worth
Mike> double points, is it fair to have say, PSK31 contacts worth the

I don't operate PSK31, and I'm not that interested in trying at the
moment, so I can't say.

Mike> I've seen a number of cases where a phone operator has worked
Mike> hard and logged a lot of QSO's, only to be beaten by a CW op

Most fibre optic cables use railroad right of ways. The railroad
already exists and
has direct paths from one city or town to another, and is one entity for
the firbre
company to lease from. And the railroads like having the extra income.
They bury
the cable off to one or both sides of the tracks and railroads are used
to heavy
equipment work being done. Railroads need communications for their signals
and keeping track of where the trains are and such anyway. So they throw in
extra fibre for that when installing the other fibre. And from those
towns fibre
is strung along telephone poles to reach that place out in the sticks.
Imagine
a high speed 'net link to Ted Clampet's shack he had before he got his
oil money....
"Wee Doggies, look at this porn"..... :-)

We allow 2 points for CW, 2 points for RTTY, and 1 point for
phone. See http://www.w0aa.org/mnqp/2004/mnqprule.html

An increasing amount of fiber is being buried on (or under) highway
right-of-way. I know; I work for a state department of transportation,
and we worked deals to get some very nice free bandwidth out of the
fibers along some Interstates. I expect we'll be able to do the same
for fibers buried along federal and state highways, once the carriers
recover from the dot-bomb and start building bandwidth out again.

This was done five or ten years ago in New York -- I worked at
the place that managed the fiber for the state. The fiber was laid
along the NYS Thruway, which passes through the nine largest cities in
NY and within some short number of miles of a large percentage of the
state population. Much of that fiber was dark last I heard.

The idea of buried fiber along every two-lane road in the country may
be a fantasy, but laying cable along every Interstate is certainly
doable with the resources available. Of course, who will run this
true "information superhighway" is the next debate...

Ten-twelve years ago I was up in northern Minnesota deer hunting. Got up to my stand way back down a township road, 5 miles from the nearest dwelling, at zero-dark-thirty and waited for Bambi's dad to show up with the sunrise. Just in time for morning colors (0800) I start hearing this awful racket off in the distance, like a farmer might be buring drainage tiles or something, except this part of Minnesota hasn't seen an agricultural plow since the depression. Finally got curious (and cold) enough to go investigate. Here, out in the middle of absolute nowhere, is a contract crew burying a 144-fiber cable big as your wrist, and another spare alonside of it. Every half-mile they put in an above-ground service loop, and the next day another crew came behind and plonked down a splice-and-access pedestal at each loop waiting for the subscribers to show up. The pedestals are still there, some kinda shot up, but no customers on the horizon. I bet the local Podunk Power Cooperative is getting ready to roll out BPL in the same manner!

Hello, Hans

My gut feeling is that if someone is out in the boonies and they *really*
want high speed internet, they could go for satellite and have a decent
system. Yes, $50.00 per month is not as cheap as you can get cable or DSL
(at least in some areas), but it is doable and I doubt too many ISPs are
going to try high speed service where, even if they could subscribe
everyone, the average population density is 10 per square mile or less ;)

I suspect that BPL will go the same route; they'll try, perhaps, but it will be in the cities and suburbs where they can make money (and they will have competition *and* cause a lot of qrm). The low population density areas will *still* not be served (except by satellite or, perhaps, dial-up).

As for president, I *still* like Ike!!!

Sorry, Carl, if I do it for you then I gotta do it for everybody and
the whole point of the pool is lost.

The original ARRL blurb on WRC-03 said it would take two years. That's
almost exactly Dee's date.

Frankly I am surprised it's taken this long - and with the new NPRM
out there, it may be even further down the pike.

Yep. In fact it should be triple for CW and double for data modes.
>
> While of course all contest rules are inherently arbitrary, does it

Sure - if that mode uses less spectrum space and is more efficient.

It's more than fair. If anything the slant is towards 'phone because
you can put almost anybody in front of the mike after a few minutes
instruction and they can make FD QSOs (particularly if there's a
'logger' sitting right there).

Working CW takes special skills, working PSK-31 takes more equipment
and some skill (not as much as CW, of course, but more than 'phone).
Both modes use much less spectrum space and are more efficient. So
their use should be encouraged on Field Day (which is about the only
large mixed-mode HF contest in existence).
>
> I've seen a number of cases where a phone operator has worked hard and

Said CW op also worked hard, did he not? And is "hard work" the
criteria, or effectiveness? You can fit at least 10 CW or PSK QSOs in
the space of one SSB QSO. Shouldn't that sort of efficiency be
encouraged?

Simply stated....CW Contesting requires real skills. Digital requires the
ability to type.
Phone is way down there from the above requirements.

If you want to do so....Give phone 1 point, digital 2 points, and CW 5
points per qso.

That's my opinion, and I'm sticking to it.

Yep with one of those new fangled voice machines.

The above is in response to what one hears in contesting in addition to a
lot of bad manners and yes that happens on CW also ergo KI3R does his
"needle point" that weekend.

Those "voice keyers" annoy me more than anything, even "CW keyers". I
felt like jumping into a QSO Party a few weeks ago but *five*
different stations had voice keyers calling CQ every thirty seconds
and didn't acknowledge my response. Honestly, if you can't talk into
the radio for the length of the contest, then maybe you should take a
break.

Voice keyers in my opinion are just plain wrong.

Wow, talk about an arbitrary point, Jim! I never heard of any contest
rules based on bandwidth. ALthough if they did, it could make fro some
interesting scoring.

That doesn't really answer the question. A Technician can send CW on certain HF bands, even without a higher-class license-holder present. A ham with any other license can work phone contacts. Therefore, whether or not an amateur has passed a Morse code test has nothing to do with woether or not they can use Morse code. Even if the multiplier is to provide encouragement to use Morse code, it still doesn't have anything to do with whether or not hams are tested.

Now, if you're going to assert that the potential end to Morse code testing will eventually cause hams to stop learning and/or using Morse code, and that therefore the multiplier is akin to the "marriage penalty" [1], well, I'm not sure that's true. If it is, NCI should be raising holy hell about the pro-code conspiracy behind all these contests, right?

Jack> And how hard did that CW op work?

Mike> I doubt twice as hard as the Phone person.

You could measure it yourself, you know. Work two similar contests (say, two of the QSO parties coming up soon). Operate solely in phone for the first contest. Score your points and keep track of your experience with notes or something. Operate solely in CW for the second contest. Do the same sort of scoring and note-taking. Report back to the group with your personal experience.

When I know the code, I'll do the same thing, if only to satisfy my
own curiosity.

Mike> - Mike KB3EIA -

Jack.

[1] For those who are unfamiliar with this concept, for some time the
tax structure in the US was such that married couples with two similar
incomes paid more tax than married couples with one income, or with
two very dissimilar incomes, even when the total number of dollars
earned is the same. The common theory behind this is that it is
designed to encourage married couples to have one working spouse and
one non-working spouse. Whether or not this is moral, ethical, or
even a good idea is a different question.

Agreed, I don't like keyers at all. If I made contest rules, they would
be outlawed. Get caught using a keyer, and yer out!

I've been in contests where the timeing is set so close between CQ's
that there isn't time to get in a reply. I suppose the idiot wonders why
he's getting no one coming back.

hmmm, maybe an op could get mults for turning in keyers! 8^)

I agree with this, except that a satellite link has too much latency to
support
VPN, so some of us rural folk are still stuck with only dialup (and
I$DN). There
is an outfit in town that's putting up terrestrial microwave links in
the area,
but they claim the County is stalling on the approval for the tower they
need
to service my area. Grrrr!

I give BPL little chance of success in my neighborhood - the PG&E lines
around here
generate so much hash that it would never fly. Had PG&E come out once
to look at
it aan it went away for awhile, but now that the hot weather's back so's
the noise.

Sounds like a good deal to me. Make every contest night a straight
key night. Or paddles, or whatever, as long as it's by hand and
without assistance -- that means no keyboards either.

Mike> I've been in contests where the timeing is set so close between
Mike> CQ's that there isn't time to get in a reply. I suppose the

I'm waiting for the day I hear "CQ contest, CQ contest, this is K1XY,
please QSY five kilohertz up..." repeated over and over. That'll
really tweak me.

Mike> hmmm, maybe an op could get mults for turning in keyers! 8^)

Nah, imagine a Turing-like contest where you get points for
identifying different methods of Morse transmission, such as straight
keys, paddles, bugs, keyboard or keyers.

One NCI Director calls contests "electronic splat ball".
Actually, I kinda like that description. One of my grandsons
asked about contesting, and I used that metaphor. Now he wants
to multi-op with me in this years SS.

> You could measure it yourself, you know. Work two similar

I regularly work both weekends of SS (CW one weekend, Phone two
weeks later). Both are scored the same way, each two-way contact
counts for 2 points (a message sent and a message received).
Personally I enjoy the CW weekend more, but invariably score
higher on Phone weekend, simply because I can copy CW at only
about 45 WPM, and voice at about 300WPM.

73, de Hans, K0HB

PS: If you don't like keyers, you ain't gonna make it
contesting.

Yes it is worth giving the CW contacts double points. It will serve as an aid in preserving a valuable communications tool. Some people will learn it for the very purpose of getting more points in the contest.

This last Field Day, conditions were so poor that our two CW stations netted more contacts than our three voice stations and GOTA station combined. Not just points mind you but actual number of contacts.

3276. Bush Backs BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-28 00:38:03 UTC
From: Kim_Jong_Il@volcanomail.com
Message-ID: <26a0f230.0404271638.14c97838@posting.google.com>
Source record: 91290
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.policy

A month ago, I pointed out that Bush backed broadband access.

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&oe=UTF-8&safe=off&threadm=26a0f230.0403261754.1561309d%40posting.google.com&rnum=10&prev=/groups%3Fq%3Dkim_jong_il%2Bgroup:rec.radio.shortwave%26hl%3Den%26lr%3D%26ie%3DUTF-8%26oe%3DUTF-8%26group%3Drec.radio.shortwave%26safe%3Doff%26scoring%3Dd%26selm%3D26a0f230.0403261754.1561309d%2540posting.google.com%26rnum%3D10

or

http://tinyurl.com/3gvsn

His speech at the time lacked details, and he made no mention of BPL.
Yesterday, he backed BPL.

http://www.whitehouse.gov/news/releases/2004/04/20040426-6.html

>>
....
And so here are some smart things to do: One, increase access to
federal land for fiberoptic cables and transmission towers. That makes
sense. As you're trying to get broadband spread throughout the
company, make sure it's easy to build across federal lands. One sure
way to hold things up is that the federal lands say, you can't build
on us. So how is some guy in remote Wyoming going to get any broadband
technology? Regulatory policy has got to be wise and smart as we
encourage the spread of this important technology. There needs to be
technical standards to make possible new broadband technologies, such
as the use of high-speed communication directly over power lines.
Power lines were for electricity; power lines can be used for
broadband technology. So the technical standards need to be changed to
encourage that.

And we need to open up more federally controlled wireless spectrum to
auction in free public use, to make wireless broadband more
accessible, reliable, and affordable. Listen, one of the technologies
that's coming is wireless. And if you're living out in -- I should --
I was going to say Crawford, Texas, but it's not -- maybe not nearly
as remote. (Laughter.) How about Terlingua, Texas? There's not a lot
of wires out there. But wireless technology is going to change all
that so long as government policy makes sense.

And we're going to continue to support the Federal Communications
Commission. Michael Powell -- Chairman Michael Powell, under his
leadership, his decision to eliminate burdensome regulations on new
broadband networks availability to homes. In other words, clearing out

the underbrush of regulation, and we'll get the spread of broadband technology, and America will be better for it. (Applause.)
....

>
> Jack.

Actually Jack, that would not be quite a fair measurement. The CW op has put in many hours of practicing and participating in contests to get his/her speed up to a really useful contest level. Although the phone op has also put in hours participating in contests to get his/her abilities honed to contest level, it is far fewer hours than the CW op to get to the top levels of ability. So the double points, at least to me, also acknowledges the longer preparatory stage that it takes to get good at it.

In the contests in which I've participated, I have noticed that the best CW ops can usually run more stations in less time because of the need for fewer repeats than the best phone ops. On the other hand, less experienced people can run phone contacts faster than CW contacts.

In my own contesting experience, my all time high was 310 contacts and it was a CW contest. My second best was down around 150 contacts and it was a voice contest. I'm running only 100 watts and wire antennas. I found it much easier to break through pileups and bad conditions on CW. But it took time to learn CW.

Actually I find that CW is more productive and I'm not nearly as fast at CW
(20wpm for contest, 15wpm for ragchew) as you are but then I'm just running
100watts into basic wire antennas.

Do you run a frequency, or do you "search and pounce"?

If you have a modest station and you S&P, then CW will likely be more productive because the gating factor is **getting the attention of the target station**. CW can be better at that because you can 'un-zero-beat' to stand out from the pile up and use other tricks and skills.

However, if you're running a frequency, then the **speed with which you can exchange messages** is the gating factor, and voice is faster than Morse by quite a margin.

The November SS is a particularly good event to compare CW vs. Phone, since the two weekends are close together (share the same general propagation conditions) and the list of participants is nearly identical between the two weekends so differing skill levels and station configurations are factored out.

I've tried running a frequency on SSB contests but just don't get enough takers to make it worthwhile so I finally end up doing the "search and pounce". I'm not good enough yet to run a frequency on CW so by necessity do "search and pounce" when operating in this mode.

I had a lot more fun just setting a "personal goal" and working towards
that when I get into a contest. I set out to get a "Clean Sweep" a few yeas
ago and did it...with less than 150 Q's on each mode!

I'm wondering how many S-units will be added to my 100 watt mobile signal
if it's "/VO1" in the next Sweepstakes...?!?!

Like this? They're hittin' those guys more and more. LOL!
J

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
Gambler's C.B. & Ham Radio Sales & Service) File No.
EB-04-DT-225
)
Pinconning, Michigan) Citation No.
C20043236004)

CITATION
Released: April 13,
2004

By the Enforcement Bureau, Detroit Office:

1. This is an official Citation issued pursuant to Section
503((5) of the Communications Act of 1934, as amended
(``Act''),1 to Gambler's C.B. & Ham Radio Sales & Service
(``Gambler's'') for violation of Section 302(of the Act,2
and Sections 2.803(a)(1) and 2.815(of the Commission's
Rules (``Rules'').3

2. On April 9, 2004, Gambler's offered for sale at their
store located at 4671 North Huron Road, Pinconning,
Michigan, the following non-certified Citizens Band (``CB'')
transceivers:

NAME MODEL COST
Ranger RCI 2970 DX
$449.95
Ranger RCI 2980 WX
$449.95

Ranger RCI 2985 DX
$479.95
Ranger RCI 6300 F
$329.95
Galaxy DX33HML $198.95
Galaxy DX48T
$419.95
Galaxy DX66V
$279.95

According to the Commission's records, these devices have not received an FCC equipment authorization which is required for Citizens Band transmitters marketed in the United States.

3. Section 302(of the Act provides ``No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section.'' Section 2.803(a)(1) of the Rules provides that ``... no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless: (1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labeled....'' Gambler's offer for sale of these devices violates both sections.

4. Gambler's marketed these devices as amateur transceivers. The Commission has evaluated radiofrequency devices similar to those listed in paragraph 2 and concluded that the devices at issue are not only amateur radios but can easily be altered for use as CB devices as well. A CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service, and it must be certificated by the FCC prior to marketing or importation.4 The Commission has further concluded that these devices fall within the definition of a CB transmitter and therefore cannot legally be imported or marketed in the United States. See Response from the Commission's General Counsel to U.S. Customs Service dated May 17, 1999, 14 FCC Rcd 7797 (1999).

5. Additionally, dual use CB and amateur radios of the kind at issue here may not be certificated under the Commission's rules. Section 95.655(a) of the Rules5 states ``....([CB] Transmitters with frequency capability for the Amateur Radio Services....will not be certificated.'' See also FCC 88-256, 1988 WL488084 (August 17, 1988). This clarification was added to explicitly foreclose the

possibility of certification of dual use CB and amateur radios, see id., and thereby deter use by CB operators of frequencies allocated for amateur radio use.

6. Furthermore, the Commission has revised Section 2.1204(a)(5) of its Rules6 to prohibit all marketing and/or offering for sale in the United States of such devices even when the purchaser(s) had provided assurances that the transceivers are being bought solely for export. ALL DOMESTIC MARKETING OF SUCH DEVICES VIOLATES THE COMMUNICATIONS ACT OF 1934, AS AMENDED, AND THE COMMISSION'S RULES.

7. In addition to the marketing of the non-certified transceivers addressed above, Gambler's also offered for sale on April 9, 2004, the following CB external radio frequency power amplifiers (``linears''):

NAME MODEL COST
Palomar Skipper
$349.95
Palomar 225 $119.95
Palomar 250 $159.95
Palomar Skipper 350
$179.95
Palomar 650 Magnum
$348.95

8. The linear amplifiers indicated above are not only illegal to sell but also illegal to advertise for sale. Section 302(of the Act provides ``No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section.'' Section 2.803(a)(1) of the Rules provides that ``... no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless: (1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labeled...'' Section 2.815(of the Rules states: ``... no person shall manufacture, sell ... any external radio frequency power amplifier or amplifier kit capable of operation on any frequencies between 24 and 35 MHz.'' Gambler's offer for sale of these devices violates these sections.

9. Subsequent violations of the Communications Act and/or the Commission's Rules may subject the violator to substantial monetary forfeitures not to exceed $11,000 for

each such violation or each day of a continuing violation,7 seizure of equipment through in rem forfeiture action, and criminal sanctions including imprisonment.8

10. Gambler's may request a personal interview at the Commission's Field Office nearest your place of business. The nearest office is the Detroit Office, 24897 Hathaway Street, Farmington Hills, Michigan 48335-1552, which you may contact by telephone at (248) 471-5661. You must schedule this interview to take place within fourteen (14) days of the date of this Citation. Alternatively, you may submit a written statement to the above address within fourteen (14) days of the date of this Citation. Any written statement should specify what actions have been taken to correct the violations outlined above. Please reference case number EB-04-DT-225 when corresponding with the Detroit Office.

11. This Citation shall be sent First Class U.S. Mail and, Certified Mail, Return Receipt Requested, to Gambler's C.B. & Ham Radio Sales & Service, 4671 North Huron Road, Pinconning, Michigan 48650.

12. The Privacy Act of 19749 requires that we advise you that the Commission will use all relevant material information before it, including any information disclosed in your reply, to determine what, if any, enforcement action is required to ensure compliance. Any false statement made knowingly and willfully in reply to this Citation is punishable by fine or imprisonment under Title 18 of the U.S. Code.10 Please be advised that if you choose not to respond to this Citation and a forfeiture is issued, your unresponsiveness will be considered in our assessment of a forfeiture amount.

The latest NPRM would allow low-drive linears and linears that cover 10m without mods to be certified. About time, as the rules only hurt hams and didn't make much difference to those who want to run illegal power on CB.

Yes..he is clueless, but the political agenda here is to promise people what they want to hear. Given that the FCC has increased restrictions on BPL deployment in its recent NPRM regarding Part 15 requirements means that the market will sort it out. Investors in BPL will see new limitations on BPL and have to consider its reliability against alternative systems that really work, like DSL, cable, and the various flavors of wireless continuously emerging. The shrub and his current administration won't have to kill it, the market will. It just sounds good in this election year. However, it just shows how stupid and gutless the management of this BPL issue has been!!!

The ones under ground and under water already are.

The problem will be when every house in your neighborhood is a big
#&%*(*& radiator. Or even worse when your KW wipes out the entire
Internet service in a few square miles.

I'm a rural customer of an electric cooperative. (I happen to use
them for my dialup ISP also)

A couple of years ago when I was having a bout of power line
interference I happened to talk to their VP for new technology,
engineer to engineer.

Among other things he told me that reading meters was a big expense
since their service area is huge, covering good parts of three
counties, one of which is the size of Connecticut. They (we, I'm a
part owner) have 29,000 customers and 2,400 miles of lines.

So they (we) tried a system of reading the meters remotely, using
(very) slow-speed data on the power lines. They couldn't even solve
the technical challenges of doing this and wound up changing out most
of the meters to ones with built in transmitters that can be
interrogated by a guy driving around in a pickup truck.

If they can't read my meter remotely how in the hell are they going to
supply me with high-speed data transmission? BTW, I've strongly
suggested that they don't try.

If you were the average ham, Hans, and the purpose of the point
multiplier was to balance out the speeds, then the multiplier would
have to be 6 to be "fair". Personally, my multiplier right now would
have to be 20, but it's a goal of mine to get it down to 2 someday.

Hans> 73, de Hans, K0HB

Hans> PS: If you don't like keyers, you ain't gonna make it
Hans> contesting.

We definitely have different goals in contesting. I don't care about
beating anyone else. When I enter a contest, my goal is to collect as
many points as possible without losing sight of why I'm there -- to
have fun, and to become a better operator.

What's your goal?

Jack.

Depends on the event....

In the MNQP it's to give everyone (especially county hunters) a chance to work a new Minnesota county.

In CQWWDX it's to do better than I've ever done before (setting a new personal best) knowing I'll never win because I live in the infamous "black hole" of propagation and can't break throught the right- and left-coast RF curtains.

In either of the 160 contests it's to pick up new countries to fill out my 6-band DXCC.

In Nov SS it's take-no-prisoners-bring-home-the-walnut-plaque and get in the top-10 box for my class.

In CQ-M it's to fill in the blanks on my oblast map.

In all of them, to have fun, tweak the engineering of my station and antenna farm for best communications efficiency, and to pick up some kind of bragging rights for the next MWA meeting (see http://www.w0aa.org)

Not all CW ops put in as many hours of practice, and some phone ops put in serious hours. My first contest -- as an Extra, no less -- was a Field Day. I was terrified of the microphone, and spent more than six hours practicing calling into a dead mike. It may sound stupid to some of you, but I was really really really shy. We had a written script to follow: "CQ Field Day, CQ Field Day, this is Whiskey Six Charlie X-Ray" was the first line, then the next line included the response with blanks to fill in, and even a line to thank the other amateur and wish them luck in the contest. I don't think of this as being the same as a voice keyer, by the way. We were actually pushing the mike button and speaking, which was very exciting. The one thing that was more fun than calling CQ was being the control op for Technicians and non-amateurs who wanted to give it a try. One Tech got the Cooke Islands as his first QSO, and he's now a General.

Dee> In the contests in which I've participated, I have noticed that

Dee> On the other hand, less experienced people can run phone contacts
Dee> faster than CW contacts.

Oh, I agree. By far, the most common phrase at my station was "Say again?". At my current stage of CW "literacy", I effectively need an interpreter -- that cuts down on speed drastically.

Dee> In my own contesting experience, my all time high was 310
Dee> contacts and it was a CW contest. My second best was down around
Dee> 150 contacts and it was a voice contest. I'm running only 100

Dee> pileups and bad conditions on CW. But it took time to learn CW.

I'm also in the 100W and wire antenna group. I don't have enough
experience with pile-ups and bad conditions, but one reason I want to
learn CW is because people think about what they send and don't waste
words on stupid stuff (at least in my fantasy-land) unlike other parts
of the band. I've only heard five minutes of 14.313, but that plus
some VHF repeater abuse has been enough to convince me that I want to
be where the better operators are, and I really hope they're on CW.

I've done the same with our cooperative here.

Personally, I think attempts to fight BPL through the political system are a waste of time. The amateur radio community doesn't have the financial resources to outbid the utilities for legislation.

What *will* stop BPL is economics.

Many of the expenses of offering broadband communications are independent of transmission technology. Obtaining a backbone connection, providing mail & web servers, customer support & billing are all expenses that are the same whether you're providing BPL, DSL, or cable modem service.

BPL has the additional disadvantage of requiring well-trained personnel with expensive safety gear to maintain the infrastructure. Most cable and DSL maintenance can be done on the ground.

BPL is at an advantage ONLY in very rural places, too small for cable and too far from the CO for DSL. Such places don't have enough customers to pay for the fixed infrastructure.

IMHO a few utilities will try full-scale rollouts of BPL - and will find it doesn't sell enough to pay the expenses. It'll go the way of the picturephone.

==========

If that doesn't work, we can tell the freeband community what's wiping out 26-29MHz, and post a few photos of the BPL access equipment, and then be sure to not get anywhere near a power pole without a bulletproof vest<grin>...

hmmmm, I have to disagree somewhat.

This is kind of putting CW on a pedestal. Let's take FD as an example.

I spend a lot of time planning, putting up antennas and tents and hours
and hours of operating. Some of our CW ops help in this effort also,
including the hardest working one out of the bunch. But some others
simply show up and work a few hours, then go home.

The point is, if you give extra points because of effort involved, then
you have to decide what constitutes "effort".

> In the contests in which I've participated, I have noticed that the best CW
> ops can usually run more stations in less time because of the need for fewer
> repeats than the best phone ops.

I have been amazed how quickly they can run. Humbled in fact. Adn I
think that kind of flies in the face of those that say that CW is slower
to work in a contest than SSB.

> On the other hand, less experienced people
> can run phone contacts faster than CW contacts.

If you compare the person to them self, that is true.

> In my own contesting experience, my all time high was 310 contacts and it

But it took some time to learn just how to put a station together too.

I'll defend testing CW, and I've been willing to put in a lot of effort
to take my CW abilities to the "he stinks" level. But it sure seems like
an unnatural advantage to have double points.

We can quit fussing about the NCI "support" of the "Great ARRL Giveaway". I've read the NCI comments on RM-10867, and they contain no persuasive arguments whatsoever. Basically NCI just ticks off the points of the ARRL/NCVEC petitions, and "supports" them with remarks like "81% agree with this", "92% agree with this", etc.

Reading the FCC ECFS comments uncovered one very heartening bit of information. W3BE, who is generally a very staunch supporter of ARRL, and who notably is a member of NCVEC (with their clone giveaway proposal) rips into them (ARRL and by extension NCVEC) on several points. John is also a long time FCC'er and his views will have influence with the Commission. In stark contrast to the say-nothing NCI comments, here are some excerpts from his submittal.

"This commenter also takes issue with the petition.s plan for the Commission to upgrade our 282,500 Technician and our 67,532 Tech Plus operators, without examination, to General Class.19 In effect, our present 146,164 General Class operators -- all of whom have qualified by examination for the privileges of that operator license class -- would suddenly find their stations sharing their privileges with some 350,032 operators, none of whom have similarly qualified. Today, for a Technician or Tech Plus Class operator to upgrade to our General Class, the person has to answer correctly 26 out of a unique set of 35 questions concerning the privileges of our General Class operators.20 Each examination utilizes questions taken from our Element 3 question pool. Our pool is also maintained through a cooperative effort among our VECs and is in the public domain. An Amateur Extra or Advanced Class VE has prepared each question in this pool. It is, therefore, the definitive statement by our knowledgeable operators as to what a successful examinee for our General Class operator license needs to know. Our VEs stand ready to administer this examination to any and all of our Technician and Tech Plus

Class operators. There are training manuals and courses available to those who need assistance.

"Moreover, for the Commission to order an exemption to our Element 3 General Class examination for our 350,032 Technician and Tech Plus operators would sully our reputation for excellence. After all, the Commission would have excused from our examination over 70% of our General Class licensees. More than two operators out of three, therefore, would be unqualified for their privileges. Such an indefensible situation would be detrimental to the future well being of our amateur service and for maintaining harmony and goodwill within our amateur service community. This commenter, therefore, asks respectfully for the Commission to also dismiss this aspect of the proposal.

"This commenter takes issue with the petition's plan that would have the Commission upgrade our 84,563 Advanced Class operators to Amateur Extra Class without proving to our amateur service community that they are qualified to hold this -- our most prestigious class of operator license. To adopt this proposal would be highly unfair to our most dedicated and most highly qualified 107,313 Amateur Extra Class operators who have expended the time and effort to master the necessary qualifications. By climbing to the top, step-by-step, they have demonstrated their unqualified support for the objectives of our amateur service in our United States. Our Advanced Class operators -- for whatever reasons. have stopped short of the top rung of our ladder. To implement any such plan would diminish the reputation for excellence associated with our expert class. It would incur the disapproval of the very amateur operators who have so faithfully passed all of our examinations. It would, therefore, be detrimental to the future well being of our amateur service and for maintaining harmony and goodwill within our amateur service community. This commenter, therefore, asks respectfully for the Commission to dismiss this aspect of the proposal."

---Then he takes aim on the disincentive licensing practice of slicing the bands up into it's current host of ghettos-by-license-class.

"Finally, this commenter takes issue with the petition.s request to once again tinker with our frequency sub-bands. Our frequency sub-bands are the classic example of well intentioned, but ineffective, rules taking on a life of their own. All operator frequency authorizations should be as complete bands. Only in this manner would the notion of spectrum rewards as an upgrading motivator have a chance of working effectively. Too many hams seem to have the attitude, 'I like my call sign. There's no need to upgrade just for a few more kHz.. That should tell us something. It is the Commission's class-distinctive sequential call sign system that is the upgrading motivational tool that

works. Slicing up a frequency band by license classes seems to provide little, if any, significant motivation for upgrading to those who need motivation beyond the personal satisfaction of having attained our expert level of excellence. A segregated frequency sub-band scheme clearly increases the monitoring and enforcement workloads and isolates those whose self-training progress would benefit most from over-the-air communication with those having the expertise of the higher operator classes. It would, therefore, be detrimental to the future well being of our amateur service and for maintaining harmony and goodwill within our amateur service community. This commenter, therefore, asks respectfully for the Commission to also dismiss this aspect of the proposal."

Finally, it was humorous to note one commenter who has submitted a total of 89 pages of comments, almost totally unresponsive to the ARRL petition, but merely tangential meanderings uncomplimentary to amateur radio in general. Unfortunately he gave no call sign, so I was unable to identify his license class.

....the NTIAyesterday (4/27/2004) released a paper which argues
AGAINST relaxing Part 15 (see below). Full NTIA report at
http://www.ntia.doc.gov/ntiahome/fccfilings/2004/bpl/index.html

"Critical review of the assumptions underlying these analyses
revealed that application of existing Part 15 compliance
measurement procedures for BPL systems results in a significant
underestimation of peak field strength. Underestimation of the
actual peak field strength is the leading contributor to high
interference risks. As applied in current practice to BPL
systems, Part 15 measurement guidelines do not address unique
physical and electromagnetic characteristics of BPL radiated
emissions. Refining compliance measurement procedures for BPL
systems will not impede implementation of BPL technology because
BPL networks reportedly can be successfully implemented under
existing field strength limits.

"Accordingly, NTIA does NOT recommend that the FCC relax Part 15
field strength limits for BPL systems. Further based on studies
to date, NTIA recommends several "access" BPL compliance
measurement provisions that derive from existing Part 15
measurement guidelines. Among these are requirements to: use
measurement antenna heights near the height of power lines;
measure at a uniform distance of ten (10) meters from the BPL
device and power lines; and measure using a calibrated rod
antenna or a loop antenna in connection with appropriate factors
relating magnetic and electric field strength levels at
frequencies below 30 MHz."

Another excerpt.....

"Assuming that co-frequency BPL devices are deployed at a density
of one per km^2 within a circular area of 10 km radius,
interference to aircraft reception of moderate-to-strong radio
signals is likely to occur below 6 km altitude within 12 km of
the center of the BPL deployment. Interference likely would
occur to aircraft reception of weak-to-moderate radio signals
within 40 km of the center of the BPL deployment area."

Gee, do ya think we oughta deploy this in Terlingua, Texas, Mr.
President?

With all kind wishes,

Source record: 91366

Many of you have written to say that the Morse code we ran on the
Variety cover of April 27 was incorrect. It was not wrong, but it was
not the version many of you know.
What we should have made clear was that there was several versions of
the Morse code. The one we ran was the original Morse code, the one used
by generations of railroad telegraphers, including the retired men who
gathered Saturday to celebrate Samuel Morse's birthday. You may notice
in the article that they refer to confusion among the 5 dots for a
''p'' and 4 dots for an ''h.''
The other version, the International Morse Code, was used by the Navy,
ham radio operators and some Boy Scouts. (Some Scouts used the original
code.) Many people still use it.
We regret the confusion and should have made the difference clear.

Peg Meier, Star Tribune

>>> <K4YZ@aol.com> 04/26/04 09:43PM >>>
Dear Ms. Meier,

If Morse Code as a methodology of radio communication is "dead",
then
there are several MILLION licensed Radio Amateurs around the world who
have yet
to get the word!

Perhaps you should listen to the radio frequencies between 7.0 to

7.1MHz, 14.0 to 14.1 MHz, 18.068 to 18.090Mhz, and 21.0 to 21.1MHz on
any good
weekend and listen for yourself. These are not the only frequencies
that Amateurs
use to communicate in Morse Code...Just the most popular ones.

With best regards,

Steven J Robeson, LPN
151 12th Avenue Northwest
Winchester, TN 37398

It's not *just* the database administration. Another aspect of the problem is that the *rules* have to be maintained for those orphaned classes. How do you deal with the sub-band by class privs without consolidation.

By consolidating into just three classes (including the new beginner class with meaningful HF privs), the rules can be simplified greatly. That will ease the administrative burden on the FCC (and the VECs) in ways that go beyond just the database issue.

I want to shake this dude's hand! It's almost like something MEANS
something! Like our licenses.

That is one of the saddest things about the Giveaway...oops,
the one time adjustment. In the end, all it does is dilute the service.
More General glass ops? sure. But if most of them are Technicians, that
will dilute the average amateur to the Technician level.

If some people here think that's BS, let 'em. Life's a b***h, and then
ya have to listen to my opinion.

Tell me about it. Another thing that hasn't been considered is the
condition of these lines. I have been fighting for 5 years here in Alabama
to get the 20/9 noise level (at times past) fixed. Two years of that was
educating the fools what to do about it.

Can you imagine how much trouble its going to be getting BPL through that
noise?

NCI representing it's views is one thing, but I think that when a membership supports an idea that is actually harmful to the ARS, it is time to kinda step back from it.

The day after the "one time upgrade" the testing level of the average General class licensee has gone up or down?

When is *lowering* the average tested levels of Hams a good thing?

Hans, I liked your "average" quote in the "Morse and contests" thread. Maybe it fits here too.

This would be a serious issue at the FAA for pilot licenses or even at your
local DMV for truck or bus driver licenses, but, really, from a safety and
regulatory standpoint, there isn't a whole lotta difference between HF
and VHF.
Sure it's good to know what HF band will have decent propagation at what
times, but if you did make a poor selection the worst that happens is that
you get no answer to a CQ. The regulatory rules (no pecunary business
comms, don't maliciously interfere, nobody owns any one frequency, and such)
are pretty much the same regardless of the band.

>
Except for a few medical waviers, every Advanced had to pass a 13 WPM
code test.
I'd be willing to equate that to passing the old Extra element 4b written.
Advanceds' and Extras' passed element 4a. But newer Extras (I'm an
"Extra Lite" didn't have to pass 20 or even 13 WPM. So:
element 4a + 4b (nowadays just element 4) + 5 WPM = element 4a + 13 WPM

Oh, there'd be two varities of new extras (written extra and code extra)
but I don't
see a need to keep track of which one any one extra is. This would get
us to
one less license class for the FCC to deal with.

By extension, they could also be done to make old novices to become no-code
techs. But that might mean making them give up the HF novice subbands in
trade for VHF and above. Not sure if that's such a hot idea..... Are
there
any truely active novices who haven't upgraded to general or extra by now?

>>
>
>
> I want to shake this dude's hand! It's almost like something MEANS

Getting a "gold star" is nice, but there really isn't anything a general
can't do that an extra
can do, except operate on certian subbands. Otherwise it's all the same
modes and power
levels. So what does the government (FCC) get out of it? The subbands
are a "carrot"
to get people to upgrade, but I'm not sure what the FCC gets out of it.

How many other hobbies require licenses to do the hobby? Model railroading
doesn't have novices, techs, generals and extras. Or amateur astronomy.

Yeah...but in November...?!?!

I can hack wet, and I can hack cold...wet and cold doesn't seem to be a
very comforting combination...! I have put out a solicitation on my
"ER-Nurses" list server and have already received some responses from my
colleagues in Canada with info on lodging opportunities. I hope to find a nice
cabin somewhere.

Nah, that's 11 meters. Nobody wants that mess on the ham bands. My point was to mention competing hobbies that do not require a license to do. Also an additional point I wanted to make was that we need to avoid excessive grades or levels of ham license.

Most other "competing hobbies" don't have the potential to create havoc
like an untrained, unlicensed person let loose with a radio transmitter that
s/he doesn't know how to use properly.

Most other "competing hobbies" with the potential to create a hazard to
the public are either licensed or regulated by the government in some fashion
(ie: hang gliding, SCUBA diving, motorcycle racing, etc.)

And, unfortunately Robert, there ARE some people who would love to hear
"that mess" on the Ham bands. They are few and for the most part, functionally
illiterate, but they are there. (ie: WA8ULX)

>
> Dan/W4NTI

Your opinion looks wrong to me.

My opinion is that the point schedule should be inverted from what you propose. I mean, when Aaron Jones was keeping the Morse Myths list, it would appear that a CW QSO just couldn't fail. It always got through, no matter the propogation, the power level, the QRN, or the QRM. Each and every Op would QRS for the new guy and everything was just so wonderful.

Meanwhile phone Ops practice dog-eat-dog, QRM each other, use bad phonetics, and propogation is always iffy. Furthermore, they marry their Technician sisters and don't even QSL.

Bass turds!

Give the phone ops 5 pts per completed QSO, the CW Ops get 1.

My goal is to try to up my personal best each time I revisit the same
contest. Two years in a row now, I have missed getting all 67 counties
in the PAQSO by *one* county. That is my biggest goal this year. Second
goal is to be first from PA in the New England QSO party. I've been
stuck at third for the last two years. I did a lot better last year than
the year before, but so have the people I'm competing with.

Definitely not! I am a firm believer that Contesting can be a great way to get people involved in ham radio. Many of them don't quite know what to say the first times, and a set call/reply/response gives a structure to the QSO. After that, they can develop their own personal manner of speaking during the QSO. I think what you did is the only way to go for new folk.

> We were actually pushing

Oh yeah, lightning strikes! Not to sound gushy, but imagine what was going through his mind at the moment.

Contesting was what started me on the upgrade path. At one time I was happy to just use the repeater and was going to do things on VHF and up.

Well, I went to the "Winterlude" in Ottawa this past February. Did you know that Ottawa is the second coldest countries capital in the world - the coldest is in one of the 'Stans! Anyhow, the people in Ottawa, after being socked in during November, December and January, finally go bonkers when the days get longer and the cold loses a little of it's grip. They then pretend it is warmer than it really is, and have three weekends of partying outside. Very cool, if crazy. I had a blast. My son and I took a many mile skate on the Rideau canal, which freezes over entirely during the winter. They even have concessions on the canal,

and flood it to resurface the ice for a good skate.

They really know how to do winter in Canada, so you'll be taken care of well, youbet.

They looked good from the far side and the near side, front side and
back side. So I married one of 'em.

Try stuffing this stupid statement back into your....hat.

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

perhaps they compete for participation, but they certainly not the
same. I also do amateur astronomy, and can't do much harm if I have a
poor telescope or don't know how to use it properly.

If I don't know anything about RF safety or if I can't adjust my radio
or if I put up a station that puts out RFI I can certainly have an
impact on myself and others.

I guess if the raving drunks N9PGE or K9BSD had any dependants we would
see papers on them too. They stay too drunk to keep a wife though.

N9PGE and K9BSD are the gutless wonders behind this shit. They are
either harassing others or licking each others balls. They are pathetic,
single, alcoholic faggots.

N9PGE and K9BSD stay drunk! Why do you think they cannot keep a woman?
Hell they cannot even get a date.

No Amateur Radio = No MARS.

MARS >>IS<< Amateur Radio.

There's nothing to "stuff". MARS, under current regulations and plans,
would cease to exist without Amateur Radio Operators to flesh it out.

Sorry you don't agree.

Sorry you're not man enough to understand.

Steve, K4YZ

Whose mileage, Carl? Yours?

Is Morse Code "mainstream" in amateur radio or not?

> > > Kids aren't put off by code tests *or* written tests, in my

How many kids do you really know, Carl? How many of them would be
interested in *any* sort of radio avocation?

> However,
> geting on HF and talking around the world, experimenting with (and maybe
> developing) some new sound card digital modes (ever notice how many kids are
> computer wizzes?) would appeal to them and keep them interested.

With all due respect, Carl, I don't think you're the most objective
observer of people's interest in Morse Code. Nor do I think you'd be
quite the best salesperson for the mode...

Here's testimony from someone (not me!) who actually works with *lots*
of kids on a long-term basis. This guy is right here in EPA, closer to
your QTH than to mine. His program goes after the exact kinds of kids
we say we want to attract. These are *his* words and experiences, not
mine:

BEGIN QUOTE:

"I have had the privilege of teaching an after school activity,
at the local middle school, for five years. I named it Tune in

the World, and it covers many aspects of radio and television, and of course, pushes ham radio. Each year I have had several students, both boys and girls, obtain their license and try to help them continue on the hobby."

"With this as my basis, I can tell you that 95% of the students were a pleasure to work with and each year the district offers me a nice salary to teach the class and each year I decline it. Yes, it is a lot of work, but the students enjoy it and come away with a very positive idea of ham radio."

"The attention span varies, but I have found that I have to work at making sure I have an interesting program and that no part of it goes on and on and on. I set the rules at the first meeting and have not had any serious problems. (My son and his friends have been my biggest problem.) If one expects the students to sit in their chairs and listen to a presentation for an hour, after being in school all day, they good luck. I combine power point presentations, live demonstrations, part of ARRL videos, short movies, simple building projects and computers. Interestingly, the students are always VERY interested in the Morse code and seem less so in modes connected with the computer."

"I am not a STRONG disciplinarian, but we have rules and the kids obey them and something must be going right, a few kids who were in the previous class always take the next year's class and we always have 35 to 40 students. In fact, my biggest problem is that other students want to join the class after it has been on a few weeks."

"Last year at the last minute, I offer the Radio Merit Badge at Boy Scout Camp. I was given a terrible time and hoped for six kids. I had over 1/4 of the camp at the classes and more wanted to attend. We got a dozen hams out of that one."

"So, if we want to get new, young hams, then think about reaching out to the Middle Schools, and Scout Camps. Just the camp alone, with eight weeks of camp, would produce between 80 and 100 new hams....with about 400 Scout Camps in the USA, (Cub and Boy Scout) that would mean a very nice increase in our membership."

"I do agree, that like every previous generation, the new hams need help in
getting into the hobby and if nothing else, get their email address and send
them info as well as forwarding the address to the ARRL, and local clubs.
We can sit here and complain about the lack of young people in our hobby, or
we can do something, or expect someone else to do it. Ahhh, it is

easier to
complain...right?"

END QUOTE

Note that sentence at the end of the third paragraph. The emphasis is
his:

"Interestingly, the students are always VERY
interested in the Morse code and seem less so in
modes connected with the computer."

Just one teacher's experience in one middle school and one Boy Scout
camp. But he's there, with the kids, doing the teaching and recruiting
on his own time.

Who are any of us - including you, Carl - to say he's wrong?

What evidence do you have to counter what he says, Carl?

> > Testing = knowledge = bad
>
> No ...
>
> Irrelevant/unnecessary requirements = waste of time/lack of interest = bad

OK, fine. Now imagine FCC enacts free upgrades. How are you going to
argue that the General written test is "relevant" or "necessary" when
about 2/3 of the then-licensed Generals never passed the test for the
license they hold? How are you going to sell the idea that the General
written is "necessary"?

> > > Sure. But that part of the ARRL proposal isn't the problem. And if the
> > > majority of NCI members support NCVEC's "appliance operator" class,
> > > and their "copy of Part 97" idea, will NCI support that, too?
>
> Read the numbers ...

Where? You won't even tell us how many members NCI has, or how many of
them are US hams. How many NCI members actually answered the survey?

> the majority of NCI members did NOT support either the
> "commercial gear only for newbies" or the "low voltage finals only for
> newbies" proposals from NCVEC - that implies pretty clearly to me that they
> want newbies to be able to tinker, build, modify, and experiment, just as
> did the Novices of our beginning days ...

Yep, I built my first station and many more since then. And a key part
of being able to do it was being able to start with simple projects
that gave good results. Like a simple Morse Code transmitter and
receiver.

Suppose a 'kid' with a brand-new license told you she wanted to build,
not buy, her ham radio station. Tools, skills, time and $$ are limited

- we're talking about a middle-schooler, not an adult.

What would you suggest to her as a first project, Carl?

> As far as the NCVEC proposal that applicants be required to certify that

> culpa), it doesn't indicate that that would be a substitute for at least
> some rules and regs questions on the written test - just "should folks
> certify that they understand the rules."

All hams should certify that they have read and understand the rules.
That's not a substitute for testing. But NCVEC's proposal wants to do
just that. Read the "21st Century" paper - it's a blueprint for the
NCVEC proposal. The proposers don't think new hams will learn the
rules well enough to pass a test on them!
>
> Again, it is not "support for lowering of *written* test standards" ...
> other than introducing an appropriate test like the Novice test of old for
> beginners, I see no "lowering of written test standards" - the General and
> Extra tests would remain the same. And I would oppose weakening them.

If 2/3 of the extant holders of a license haven't passed the written
test for that license, the standards have been weakened.
>
> However, for a "one shot adjustment" to align the current licensees with the
> new structure proposed, I personally don't have a problem with the ARRL
> proposal.

Why is such an adjustment needed at all? We've had 3 classes of
"legacy license" for over 4 years now. What's the problem?

> I think it's the only way to avoid the fiasco that occured 50-some years ago
> when folks lost privileges ... you know about that, and I'm sure you're
> aware that there are still some folks around who are very bitter about it.

What "fiasco" of 50 some years ago?

In 1951, FCC replaced the old ABC incentive licensing system with the
Novice/Technician/Conditional/General/Advanced/Extra incentive
licensing system that still forms the basis for our system today.

In 1953, FCC reversed its 1951 program and gave all operating
privileges to all US hams except Novices and Technicians, effective
mid-Feb., 1953. (51 years ago - was that the fiasco you meant?)

I wasn't around for those two. Some folks were bitter about the 1953
changes (no kids no lids no space cadets). The "legacy" Advanced class
was kept separate by FCC for more than 14 years.

In 1968, FCC reinstituted differences in operating privileges between
the Extra, Advanced, and General/Conditional licenses. These were
expanded in 1969. I was there, I lost privileges, and I had to wait
two years before I was even allowed to take the tests to get them

back. I wasn't bitter then, nor now. Other folks feel differently. But most hams today weren't hams when those changes took place.

And what was your score in the last major DX contest? Or lets make it
easier. How many DX QSO's have you had in a major contest....????

If under 300, you are disqualified from inputing on this discussioon.

Judging by the amount of RF I hear on HF and the presnece of a key jack on
even the most prestigeous of HF transceivers, I'd have to say "yes, it's
mainstream".

>> > > Kids aren't put off by code tests *or* written tests, in my

In CAP we have dozens of kids chomping at the bit to "get on the air". Of
the current "crop" of Cadets at th local unit, seven out of 12 are licensed
Amateurs, six of them have already one on to General.

This was exactly the response I got from one of the guys who wrote that
paper. I e-mailed him a lengthy resposne and got a very pleasant reply. I
believe them to have the right "motivations", but thier executions will be
wrong, wrong, wrong...

>> However, for a "one shot adjustment" to align the current licensees with

Agreed.

The "numbers" continue to demonstrate that plenty of people are able to
pass the requisite examinations. If there's ANY "upgrade", it should include a
written exam on the added privileges and pretinent HF propagation and
practices, even if the "upgrade" does NOT include Morse Code.

>> I think it's the only way to avoid the fiasco that occured 50-some years

I'm having some doubts about the "21st Century" paper authorship.
KL7-whatever-his-call-is claims W3BE as a co-author, yet W3BE in
his comments to FCC comes down in opposition to most of those
ideas like free upgrades as looney-tune-stupid (which they are).

Yukon is VY1, and pretty well represented in most contests. Jay,
VY1JA, is always in the chair on contest weekends, along with
assorted KL7xx/VY1 players.

The tough VE from here is VE4. Several stations are active in
RadioSport (VE4GV, VE4GV, VE4YU, etc) but they're all in Winnipeg
which is roughly 600KM away, deep in my skip zone.

I wrote a couple sentences/questions to that effect, that you snipped out.

Nothing is ever improved by making it simpler. Despite what marketing wonks may tell us, nothing is. Give me what you think is an example, and I can quickly tell you why it isn't.

Nothing is improved by lowering the bar. If most General hams have only taken the Technician test, then the average tested level is brought down to somewhere between Technician and General.

None of this is subject to spin, it is just how it is. Simple mathematics is all it is.

If it isn't improving things, or at least neutral, then it is harming things.

Database administration isn't a good excuse at all. just imagine how much database administration would be eased if there were only one class. So why don't we simply "one time adjust" every ham in the country to Extra? Everyone will have all the same privileges, so no wondering what ham is supposed to be at what frequency. That would make administration EASY.

Would one time adjusting *everyone* to the Extra level be harmful to the ARS?

Adjusting the Technicians to the next level is an incremental adjustment of the same. At what level is incrementalism not harmful?

Quick note here. I do not oppose one license class. But it would be at the Extra level at least.

If I were to butt in here, I would say that aside from the obvious CW transceiver, simple and easy to build, There are plenty of other possibilities.

AM transmitters. - Yeah, groan.

Simple SSB transmitters. There appear to be a few out there that can be homebrewed. If not, Jim should design one!

All these would be somewhat more complex than the classic CW transmitter, but that brings me back to the point I like to make about what hams "should know". Now that we are probably moving beyond the time when a super simple transmitter is the rig of choice for the budding homebrewer, it is more important than ever that the same should have a well grounded knowledge of basic electronics.

Aside from homebrewing entire radios, the youngster can do things like building interfaces to their computers from their radios. Note that there is a PSK31 Transceiver that can be built from Rocky mountain Labs IIRC that while it isn't quite a homebrew design, it isn't a bad start - it's like building a modern da version of a Heathkit.

Antennas are another matter. There is a lot of quackery on the matter of antennas these days, and some serious guidance is needed to keep the kids from getting discouraged. And yaknow, a homebrew tuner might just be a good project too!

Someone oughta write a book. hmmmmmmm.

Discouraging homebrew is possibly the most damaging part of at least one of the proposals out there as far as attracting young people.

I just don't think that there are that many youngsters that want to simply mash the PTT button on their Yeacommwood transceiver and yak as their primary activity in the ARS. We won't attract too many people that way.

I'm firmly convinced that kids that might want to join the ARS want to BUILD!

Antenna tuners (more properly called feed line tuners) are a crutch for people who can't manage to build a proper antenna to fool their transmitter into thinking it has a proper antenna.

Unlikely. It is more likely a transformer would explode before you would
see any home damage. How many times has lightning hit close to home with
the worst effect being a blackout and no fried home electronics? In
addition, most homes that have surge suppressed power strips serving
entertainment centers probably already have enough protection to prevent
this scenario. These power strips are cheap and common. Specialized
computer surge suppressed, noise filtered strips, like the kind commonly
used for computers, provide even more protection than their wimpier
cousins serving power to the family VCR. Finally, any BPL modem that
gets deployed will most certainly have lightning protection built into
it in one form or another for the simple sake of the companies
investment.

> (..and I will bet you dimes to doughnuts that the local utility
> will bury a tough *non-liability clause* into the 2mm tall fine print when

> related damage because the average person will think they are "safe".

> when that happens, watch everyone dump BPL like it's a used ford car)

I agree that a standard and general non liability clause will appear in the paperwork somewhere, as a matter of routine. However, I think the rest is a bit of wishful thinking. Besides, Ford makes a hell of a truck :-)

I think simple economics will be the death of BPL. Cable Broadband, and
DSL are getting cheaper and cheaper, and for the first time DSL is
actually cheaper in some markets than Cable broadband. Broadband can now
be had for what a dialup line cost just a few years ago. The newest
contender, and the one I think is going to kill BPL in the long run, is
satellite internet. The price is a bit high right now, but no more so
than DSL was a short time ago. I predict that it will be coming down
fast, and satellite internet will be *the* provider of the future
because it can be had as a package with digital satellite television,
and provides service to *anywhere* in north America with a clear view of
the southern sky. No miles to source limits, no load balancing, no
landlines, no muss, no fuss. I just don't believe BPL can catch up with
the economics of its competitors who have been at it alot longer.

I can be the "pariah" of anything, Briam, but it doesn't negate this
simple truth:

No Amateur Radio = No MARS.

That you seem to want to make an argument out of it when no argumant can
exist is silly. That you have a hard time telling the truth (or at least being
able to accept it) is evident. This is directly related to your inability to
suck-it-up as a man and admit that there are greater truths in the world than
your own made up ones.

Sucks to be you.

satellite may be ok for the REALLY remote place that wants to surf the web
and download email, but it has serious drawbacks for anything more than
that. the delays up and down are so long that real time games are
worthless. the split ip system messes up some business vpn uses. the
uplink bandwidth from the user is SLOW (read 56k or less in most cases).
the downlink bandwidth is limited and in the one i looked at they reserved
the right to throttle you back if you were using too much... remember, the
downlink is shared just like cable broadband, so one hog slows it down for

everyone else. they also did not like streaming video and prohibit servers. and it is not a do-it-yourself installation, it must be installed by trained techs. fiber to the curb, cable broadband, and improved dsl with extended range is more likely to be the common mechanism... some of the terrestrial wireless systems are also making inroads in medium density areas.

> > unnecessary...?!?!

FCC makes that call. And note this: One of the arguments for dumping
Element 1 is the claim that when it was dumped for Tech, the whole ARS
didn't fall apart.
So if we get over 323,000 free upgrades to General with no testing and
the ARS
doesn't fall apart.....

> > Isn't that the "call" of the person seeking Amateur licensure...?!?!

Nope. A person might think that 20 wpm code tests given by FCC
examiners are relevant and necessary to an Extra license, but they
will have a hard time finding them today..

> >>>>>Sure. But that part of the ARRL proposal isn't the problem. And if the

The reality of modern amateur HF SSB operation is transceivers, not
separate transmitters and receivers with the difficulties of
zero-beating - although it *can* be done...

> All these would be somewhat more complex than the classic CW
> transmitter, but that brings me back to the point I like to make about
> what hams "should know". Now that we are probably moving beyond the time
> when a super simple transmitter is the rig of choice for the budding
> homebrewer, it is more important than ever that the same should have a
> well grounded knowledge of basic electronics.

It's still very practical to build a simple CW *transceiver* from
scratch. Plenty of designs out there, as well as kits. A rig doesn't
have to be SOTA to be useful.

> Aside from homebrewing entire radios, the youngster can do things like
> building interfaces to their computers from their radios.

Sure, but that misses the point.

> Note that
> there is a PSK31 Transceiver that can be built from Rocky mountain Labs
> IIRC that while it isn't quite a homebrew design, it isn't a bad start -
> it's like building a modern da version of a Heathkit.

Sort of. While the little PSK rigs are fascinating, they are QRP
monobanders that cover a tiny slice of one band each. And you have to
have a computer to use them. They're certainly an option, though.

> Antennas are another matter. There is a lot of quackery on the matter
> of antennas these days, and some serious guidance is needed to keep the
> kids from getting discouraged. And yaknow, a homebrew tuner might just
> be a good project too!
>
Knowledgeable guidance is needed. That's in short supply sometimes.

> Someone oughta write a book. hmmmmmmm.

ARRL used to put out a book called "Understanding Amateur Radio".
Great stuff. Lots of practical projects.

> Discouraging homebrew is possibly the most damaging part of at least
> one of the proposals out there as far as attracting young people.
>

Exactly.

> I just don't think that there are that many youngsters that want to
> simply mash the PTT button on their Yeacommwood transceiver and yak as
> their primary activity in the ARS. We won't attract too many people that
> way.

I agree 100%.

>
> I'm firmly convinced that kids that might want to join the ARS want to
> BUILD!
>
And since the most practical first projects are related to a certain
mode...

Boils down to this: Both the ARRL and NCVEC proposals are trying to
recapture the success of the old Novice license, although their
approaches are somewhat different. Yet they fail to see that said
success wasn't impeded in the least by a basic code skill test.

In most of the U.S., perhaps. People living in Florida should not count on
even the best surge suppressors to protect their computers or other
sensitive electronic devices from lightning-induced damage. Trust me on
this, I've tried it at home. :> Of course, that doesn't mean BPL equipment
is any more or less susceptible to damage. In Florida though, it is a good
idea to unplug equipment when it isn't in use, especially during peak
thunderstorm season, which is approaching. If you hear the sound of distant
thunder, disconnect in a hurry. If you must leave the computer plugged in,
use an APC UPS. They offer a substantial guarantee that will pay for the new
motherboard and power supply.

As the population ages and moves into condos, satellite access is going to have less appeal. Wireless, OTOH, could be used anywhere. The countryside is already littered with cellphone towers.

There's another problem with DSL in particular: Aged, inadequate telephone delivery conductors. This may not be a problem in 6-land, but it is in other parts of the country. The phone companies have been getting by with antiquated wiring for decades. Or you have the 'distance from switching center' problem. WRT keeping up with the times, the cable companies have done a better job, because they had to, to compete with the satellites for television service. Cable comes with its own set of problems, though. IMO, instead of inflicting another system on consumers, FCC would have better served its role by working to improve what we already have. I would say that BPL is sort of like reverse psychology: Use BPL to threaten DSL and cable providers, so they improve their service; but I don't think Powell is that smart.

Exactly. When I was in college we buit a 10w CW transmitter
and tested the results into a dummy load. No knowledge
of code was needed or expected.

Cheers,
Bill K2UNK

Not really. See below.

> That will
> ease the administrative burden on the FCC (and the VECs) in ways that go
> beyond just the database issue.

Let's get down to the *real* differences in operating privileges
between license classes.

Above 30 MHz, we have the following:

Novices: Limited privileges on a few bands

All other classes: All privileges.

The proposed "NewNovice" won;t change that situation at all, so the
regs don't get any simpler for VHF/UHF.

Below 30 MHz:

Technicians: Nil

Novices & Technician Pluses: Small bits of 80/40/15/10

Generals: All privileges *except* some parts of 80/40/20/15

Advanceds: All privileges *except* some parts of 80/40/20/15

Extras: All privileges.

On HF, we now have 4 sets of privileges:

Novice/Tech
General
Advanced
Extra

and the differences between the last three are only on four popular bands.

Now suppose we do the free upgrades. Here's the result:

"NewNovices": Small but different bits of 80/40/15/10

Generals: All privileges *except* some parts of 80/40/20/15

Extras: All privileges.

Three sets of operating privileges remain. All we've really lost is the Advanced set, which was simply some 'phone/image space on 80/40/20/15.

Now suppose instead of the free upgrades we do the following:

"New Novices" - Revised set of privileges. Existing Novices, Techs and Tech Pluses get NewNovice HF privileges. Existing Techs and Tech Pluses keep full VHF/UHF privs.

Everybody else stays the same.

Here's the result:

Above 30 MHz, we have the following:

"NewNovices": Limited privileges on a few bands

All other classes: All privileges.

Below 30 MHz:

"NewNovices", Techs & Technician Pluses: Bits of 80/40/15/10

Generals: All privileges *except* some parts of 80/40/20/15

Advanceds: All privileges *except* some parts of 80/40/20/15

Extras: All privileges.

On HF, we still have 4 sets of privileges:

NewNovice/Tech
General
Advanced
Extra

and the differences between the last three are only on four popular bands.

Let me make it even simpler for ya:

Giving free Generals to existing Techs and Pluses, rather than just giving them "NewNovice" HF privileges, doesn't simplify the regs at all. We still need a section to describe the NewNovice privs.

Giving Advanceds a free upgrade to Extra *does* simplify the regs slightly, by eliminating the Advanced subbands on 4 HF bands. Big deal - they amount to a few lines of text and a few blocks in the band tables.

As for VEs, the rules on testing and element credit are straightforward. clear and in the regs already. Works like this for the "legacy" licenses:

If you have or had a Novice, you get Element 1 credit only.
If you have a Tech plus, you get credit for Elements 1 and 2, and possibly 3 depending on the date.
If you have an Advanced, you get the same credits as a General - Elements 1, 2 and 3.

Simple as that.

And note this:

The NCVEC proposal includes a whole bunch of unnecessary junk such as restrictions on the type of equipment that can be used, special callsigns for "Communicators", and the "signed Part 97 statement" nonsense. (Note that since those special callsigns are only for Communicators, upgrading means a new callsign and more admin work for FCC. Since the new-callsign-with-upgrade thing would be an FCC requirement if NCVEC has its way, it wouldn't be part of the vanity rules and they couldn't charge for it.

I ask again: Show us why the "legacy" license classes *must* be immediately eliminated.

All it takes to claim somebody as coauthor is for them to contribute a
few things. They don't have to agree with the entire paper. But I do
think that someone who is as much at odds with that paper as the
comments reveal would have demanded their name be removed from the
author list.

What really tells the tale is who signed the NCVEC submittal to FCC.
It wasn't either of the hams you mentioned above.

For the record, I find the following NCVEC proposal ideas to be
"looney-tune-stupid" (great phrase):

- Limitations on homebrewing
- Free upgrade to General for post-March-21-1987 Techs and Tech Pluses
- Free upgrade to Extra for Advanceds
- 30 volt rule
- Special callsign block reserved only for newbies
- Any replacement of relevant regs questions by "signed statement"
nonsense. (If it takes a few more questions to test regs knowledge,
add 'em)

Your proposal looks better and better, Hans.

Amateur Radio Newsline(tm) Report 1394 - April 30, 2004

A Very Important Note: We urge all readers of this report to also download the audio version of this report at http://www.arnewsline.org/quincy and listen to it. Please pat special attention to the words of ARRL President Jim Haynie, W5JBP, and the urgency in his voice as he discusses the latest developments in the fight to keep Broadband Over Powerline technology from encroaching into the Amateur Service bands. There is no way to express in print the very grave nature of this situation. Only by listening for yourself can you truly understand the extreme gravity of the circumstances that our service faces if BPL is introduced nationwide.

The ARNewsline Production Team

Amateur Radio Newsline report number 1394 with a release date of Friday, April 30th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL takes on the White House over BPL, a power provider says BPL interference to mobile operations has to be tolerated and a ham radio name change. Its called the Dayton Hamvention once again. Find out the details on Amateur Radio Newsline report number 1394 coming your way right now.

THE BPL FIGHT: PRES BUSH VS. PRES HAYNIE AND THE ARRL

The ARRL and its president has expressed what they call deep concerns about a speach by United States President George Bush. One where where the leader of the free world says that standards need to be changed to encourage the delivery of Internet access using Broadband Over Poweline technology. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here with more:

--

In the boldest and most dramatic move yet in the BPL debate, the ARRL's president Jim Haynie W5JBP, directly appealed to President Bush to abandon his support for BPL technology.

Haynie says Bush's speech last week during the American Association of Community Colleges convention in Minneapolis prompted him to action. In

that speech, President Bush stated directly:

"...power lines can be used for broadband technology. So the technical standards need to be changed to encourage that."

"I faxed a letter to the White House cause I wanted to make sure they got it and we followed it up again with the regular U.S. Mail," Haynie says. "And, it'll be curious to see what kind of reaction that we get. I think, like I said, it's ill-advised.

"It's so much hype that the broadband industry has been putting out and I'm sorry to say it looks like the president has been suckered into it a little bit."

Haynie says amateur radio has reached a defining moment in its history and he is issuing a call to arms.

"This is the time that amateur radio is going to have to pull together and speak with one big voice," Haynie says. "And, on our website, we put the contact information and I want everybody to go there and look at it (www.arrl.org) and you can write the president, you can write your congressman, you can write your senators you can call 'em.

"Anything like that is helpful because amateur radio has been around for a lot of years and I'd hate to see it end based on a technology like this that any engineer worth their salt would be able to say, 'Well, this sounds fun but it's just not going to work.' "

Haynie says he wasn't blind-sided by President Bush's remarks, but has questions about his fellow Texan's true understanding of the issue.

"If you go back and read his speech he made in New Mexico, I think it was Albuquerque, he alluded to broadband then just as a general term," Haynie says. "Since that time, the actual term broadband over power line has come into his speech and I know he doesn't write his own speeches, other people do."

Haynie says its likely Bush administration advisers believe BPL is an issue that may have some mileage.

"This is an election year and anything that would seemingly stimulate the economy and create jobs is going to be a real political football and this has just got caught up in it," Haynie says.

Haynie says he is now working with the ARRL's Washington staff to arrange a personal meeting with President Bush to lay out the issue for him. And Haynie says he's hopeful that if Bush sees the damaging effect BPL has on radio spectrum - occupied not by just amateur radio - but police, fire, and government services - he may reconsider.

Haynie says he'll also go in with the findings of the National Telecommunications and Information Agency - the president's own advisory arm on radio frequency spectrum management - to make his case.

"When you get into the actual and engineering report, there's some good stuff there," Haynie says. "And I'm glad to see it. I'm also glad to see that they corroborated a lot of stuff that we said in our data.

"And, it gives us more credibility because NTIA has quoted ARRL in there a number of times in this report. But some of their measurements were even more - for lack of a better word - devastating to the industry than ours. They're talking as much as 200 meters. That's a long way!"
Haynie says BPL threatens the future of amateur radio as we know it and it's time to step up and be counted:

"I've been a ham for 32 years, 33 years or something like that and this is the worst, most difficult situation I've ever seen amateur radio in," Haynie says. "And I think whether you're interested in licensing restructuring or you're interested in somebody not identifying every 10 minutes on 75 meters or whatever the case, that all pales. It is insignificant to this particular issue.

"So we need to set all these differences aside in the amateur radio community and come together. This is the time."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Since before the first test installations went into operation, the ARRL has been warning the public about the potential for massive radio disruption to vital radio communications that BPL has the potential to cause. More information is on line daily at the ARRL website at http://www.arrl.org (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES ITS BPL IMPACT REPORT

The National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of Broadband over Power Lines. Despite a generally-glowing news release, the report itself identifies significant interference risks from BPL and concludes that the methods currently used for measuring BPL noise levels are inadequate and that more study is needed on such areas as ionospheric propagation of BPL signals.

The full report may be downloaded, either in full or chapter by chapter,from the NTIA website at http://www.ntia.doc.gov/new.html (CQ)

**

POWER PROBLEMS: INVESTIGATION INTO BLACKOUT FAULTS ENERGY COMPANIES

Power companies may be interested in reeping huge profits by selling high speed Internet access using BPL technology, but a report says that they disregarded voluntary rules that were intended to ensure the flow of electricity. This is what opened the way for last summer's blackout in

eight states and Canada, the report says.

The investigators who prepared the report say that there was a clear understanding long before the blackout last August that the Ohio region was highly vulnerable to power distribution grid instability. Ohio is where the problem began.

The report continues that had the situation been properly addressed, the cascading blackout that sped across states from Michigan to New York and into Canada probably would have been averted. In fact, investigators said that something as simple as shutting off 200 megawatts of power an hour prior to the blackout might have kept the problem from spreading.

This is the final report by investigators who looked into the cause of last summers electrical breakdown. They are urging Congress to impliment strict government standards to ward off future outages. (Published reports)

THE BPL FIGHT: NC POWER COMPANY MAKE INTERFERENCE CLAIMS

Meantime, a North Carolina power company says that the interference coming from its BPL system is not harmful to ham radio operations. As reported last week, Progress Energy claims it has solved almost all of the problems to the Amateur bands created by its test installation near the city of Raleigh. But local hams have a different view. Newsline's Gary Pearce, KN4AQ, takes an in-depth look at the claims being made by Progress Energy and what the ham radio community has to say:

--

The FCC has received its first reply from a BPL system operator to a complaint about BPL interference. Progress Energy, which operates three BPL trials near Raleigh, North Carolina, says that they are in full compliance with Part 15. Their letter attempts to set a mark for "harmful interference" to home stations, and makes a claim that BPL doesn't cause harmful interference to mobiles because they drive by so quickly.

When the Progress Energy trial began in January, Amperion, the equipment vendor, set the hardware up with signals on the overhead lines that covered the 10 and 12 meter ham bands, and most of the spectrum in between. The signals appear as a series of carriers, 1.1 kHz apart, covering 6 MHz of

spectrum for each 2000 feet of power line.

Hams complained to the FCC, and Amperion moved the spectrum used. They attempted to operate in spectrum between the 20 and 15-meter bands, with a notch blocking BPL signals across the 17-meter band. They missed the mark a little, with BPL signals starting at 14.3 MHz, 50 kHz inside the 20-meter band. And while the notch at 17 meters did reduce the signal strength, the BPL carriers were still audible, and might be heard by home stations for a block or two, if there were any hams living in the trial area_ but there are no hams living there.

In addition, the BPL signals don't end with a "brick wall" filter at the edge of their spectrum block. They trail off slowly. And those "fringe" signals were still falling inside several ham bands, again expected to be audible to a ham within a block or two of the power line.

After giving Amperion time to correct the apparent errors, hams complained again to the FCC. The result was a meeting between Raleigh hams and a Progress Energy engineer in the trial area on April 6th to review the complaint and the spectrum used. Bill Godwin, the Progress Energy engineer, had arranged to be able to talk to an Amperion technician to make adjustments to the spectrum used in real time - but, the technician was a no-show on the telephone.

On April 13th, hams checked the spectrum used again, and still no changes had been made.

On April 20th, Len Anthony, Regulatory Affairs attorney for Progress Energy, sent e-mail to the James Burtle, Chief of the FCC's Experimental Licensing Division, claiming that after moving the BPL signals off the ham bands, their system "is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

Referring to the April 6th observation with Bill Godwin, Anthony says, "These tests revealed a small level of interference at the fringes of certain frequencies. Since that time, further modifications have been made to address this fringe interference. It is Progress Energy's position and interpretation of the FCC's rules with regard to `harmful interference' that any interference that may still exist is not `harmful' as that term is defined by the FCC's rules. This level of interference does not seriously degrade ham radio operation or transmissions or cause repeated interruptions. Importantly" he continues, "since Progress Energy can make modifications to completely eliminate any interference with fixed ham operators, the only impact of any kind upon ham operations is upon mobile operators."

As for mobiles, Anthony continues, "Given that any interference experienced by a mobile operator only occurs within close proximity to the BPL facilities, such interference would be very short lived. Thus, Progress Energy is not causing any harmful interference and is in full compliance with the FCC's Part 15 rules."

An observation of the trial area on April 21st, the day after the e-mail was sent to the FCC, revealed that there had been no changes to the spectrum used. The overhead line was still emitting a full-strength signal on the top 50 kHz of the 20 meter band; signals were still audible in the notch at 17 meters, and the "fringe" carriers were still encroaching on the bottom 50 kHz or so of the 15 meter band.

This is the first claim by a BPL operator that weak BPL signals do not create "harmful" interference by the FCC's definition, interference that "seriously degrades, obstructs or repeatedly interrupts a radiocommunication service." Ham operators, of course, routinely tune through quiet spectrum looking for weak signals, and a series of carriers one kHz apart covering the band might be considered to seriously degrade, obstruct or repeatedly interrupt that activity.

And a mobile driving 35 miles per hour along a BPL-carrying power line can be in the interference zone for a minute or more - and much longer in stop-and-go traffic, waiting at signal lights, or stopping in a driveway or parking lot.

Frank Lynch W4FAL, an ARRL Technical Specialist for North Carolina who has been concentrating on the Progress Energy BPL trial, says that he will be filing another complaint with the FCC, responding to the Progress Energy e-mail. He also says that hams are not opposed to BPL per se, just the interference it causes. And he notes that it should be easy to clear up interference in a small trial area. It's BPL signals buzzing around every power line in town that have him worried.

Reporting for Newsline, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

Once the new interference complaint is filed it will be up to the FCC to investigate it and to take whatever action it deems necessary. (ARNewsline(tm), KN4AQ)

**

RADIO LAW: PETITION TO PROHIBIT BUSINESS COMMUNICATIONS ON FRS FAILS

A Petition for Rulemaking to prohibit daily business communications in the Family Radio Service has been dismissed by the Commission. Amateur RadioNewsline's Bruce Tennant, K6PZW, has more:

--

On August 22, 2002, the Industrial Telecommunciatons Association, Inc. -- or ITA -- filed a petition for rulemaking requesting that the Commission amend Section 95.401(b) of the Commission's Rules. This, to prohibit daily business communications on the Family Radio Service frequencies.

In making its case for the prohibition the ITA said that it was concerned about the unlicensed mix of business and personal users. The ITA said that

traditional businesses were using FRS units for daily business needs and thereby limiting the ability of others to engage in the personal communications that the Commission envisioned for FRS.

One of those challenging the ITA petition was the Personal Radio Steering Group. This is an advocacy group for General Mobile Radio Service users who share part of the spectrum with the Family Radio Service. According to the PRSG filing, the FCC specifically indicated in the Regulatory Flexibility Analysis for creating the Family Radio Service that small businesses may use the FRS to conduct their affairs. Also, while FRS congestion does exist in and near sports and recreational facilities, theme parks and shopping malls, little of this congestion is attributable to recurrent business or commercial communications.

Based on this and other information provided by the public, the FCC has concluded that day to day business communications is a valid use of the Family Radio Service. That this was intended in the Report and Order creating the service and that there is little merit to the Industrial Telecommunications Association rules change request.

Reporting for the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In other words, it is okay to continue to use FRS channels for routine business as well as personal communications needs. The full story is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1035A1.doc (CGC, FCC)

**

ENFORCEMENT: OFFERING NON CERTIFIED CB'S FOR SALE BRINGS CITATION

The FCC has gone after yet another purveyor of non certified CB radio gear capable of operating in the ham radio bands. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The FCC's Altanta Office has issued a citation to Jim Norton, the owner of CB Sales and Service in Anniston, Alabama for the sale of non certified CB equipment. Noted in the citation were six different models of non certified exquoipent, five of which had been modified to transmit on Amateur frequencies."

--

The FCC alleges that an investigation by its Atlanta Office revealed that on March 11, 2004, Norton offered for sale at his retail store up to eight models of non-certified Citizens Band transceivers all bearing the Galaxy trade name. According to Commission's records, none of these devices have received an FCC equipment authorization which is required for Citizens Band transmitters marketed in the United States. CB Sales was charged with

violation of Section 302(b) of the Communications Act, and Section 2.803(a)(1) of the F-C-C's Rules. (FCC, RAIN)

BREAK 2

This is ham radio news for today's radio amateur. From Auckland, New Zealand and the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: CA HAMS SUPPOERT MS WALK

Members of the Huntington Beach California Radio Amateur Civil Emergency Service supported the early morning 2004 MS Walk event on Sunday April 18th. The Huntington Beach volunteer radio operators were on hand at each rest stop along the five and 10 kilometer courses, to provide communications and assist state beach rangers and event management in case an emergency occurred.

There were over 1200 walkers on the beach path taking part in the fund raisuing event. Peter Shores, AD6TN, brought his communications van that is fully equipped with communications gear and emergency supplies. It served as a mobile command post. Another volunteer patrolled the entire course on bicycle.

The communications effort continued until about noon. There were no incidents or injuries reported during the event. (KH6WZ)

**

HAMVENTION NEWS : DARA RETURNS TO THE DAYTON HAMVENTION NAME

When thousands of hams return to Dayton, Ohio for Hamvention 2004, they will find that the "Dayton" has returned to the Hamvention. This, with word that the Dayton Amateur Radio Association which sponsors the yearly event has again remamed the gathering the Dayton Hamvention.

According to General Chairman Gary Des Combes, N8EMO, the change is in keeping with the Hamvention's 'going back to the future' theme. It also goes along with the pledge made to return Hamvention to its roots as the biggest and friendliest hometown hamfest, found anyplace in the world.

Des Combes says that for more than half a century the event has been known to the world, and to the world of Amateur Radio as the Dayton Hamvention. He says that Hamvention's ties are to the entire Dayton metropolitan area, to its economy and to the ham radio community of the region.

The 33rd annual Dayton Hamvention opens on Friday, May 14th and runs until Sunday 16th. During those three days the event is expected to draw about 25,000 people from around the world and bring millions of dollars of sales and business to the Dayton area. (Dayton Hamvention)

**

HAMVENTION NEWS: THE HAM RADIO TOWN MEETING

And since we are talking the Dayton Hamvention, let me take a moment to invite you to join our producer Bill Pasternak, WA6ITF, and an all-star group of guests as we take a trip through time to look at the "traditions" that have made Amateur Radio the great hobby and service that it is today. This, as we at Amateur Rasdio Newsline present the 6th annual Dayton Hamvention "Ham Radio Town Meeting."

This years topic is "IT'S MORE THAN RADIOS -- Keeping The Traditions of Amateur Radio Alive." Bill will be your host and moderator. Joining him will be a whose who group including our leynote speaker Bob Heil, K9EID, of Heil Sound Ltd. Other presenters include Radio School's Gordon West WB6NOA, Worldradio Magazine Editor Nancy Kott WZ8C, Producer/Director Dave Bell W6AQ, Philadelphia newsman Mark Abramowicz, NT3V, to name only a few. Also, if time permits, we will present a screening of the 1990 Icom produced motion picture titled "More Than Radios." This is the story of an "old time ham" who rather reluctantly becomes the Amateur Radio "Elmer" for a teenager thrust into his life on summer.

The festivities begin at 1 P.M. EDT on Saturday, May 15th in Hara Arena Meeting Room 3 and as usual we will have lots of door prizes. If you have the time, we promise you a most entertaining and illuminating two hours reliving the traditions of the hobby and learning that being a ham truly is a lot more than radios. (ARNewsline(tm))

HAM RADIO IN SPACE: CREW CHANGE ON THE ISS

For a time last week there were five astro-hams on board the International Space Station. This as Expedition 9 crew members Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, arrived at the space outpost on April 21st The trip was made to the Iss using a Russian built Soyuz launcher.

Making the voyage with them was European Space Agency explorer Andr, Kuipers, PI9ISS. The three joined Expedition 8 crew members Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR, who along with Kuipers are on their way back to Earth as this newscast goes to air.

Kuipers may have only spent a bit more than a week on-orbit, but he wasted little time in getting on-the-air. PE1SCW in Deventer in the Netherlands reported hearing PI9ISS in QSO with PI9ESA at 7:50 hours UTC on Saturday May 24th. Bas says that Kuipers signal was very strong signal that was reading 40 db over S-9. A few minutes later Kuipers was in range of Francisco Costa, CT1EAT, in Beja, Portugal. He said that he heard PI9ISS in a scheduled ARISS QSO also at well over S-9.

During their six-month stay on the ISS, Russian Cosmonaut Padalka will serve as the ISS Commander while Fincke will be the science officer and flight engineer. Both are expected on the air before they return home in late October. (ARISS, VHF Reflector, published news reports)

**

HAM RADIO IN SPACE: K6DUE ISS OPERATING EVENT CERTIFICATES

Certificates for those who took part in the K6DUE International Space Station Commemorative Operating Event held earlier this year have been distributed to the international delegates at the ARISS Meeting in the Netherlands on March 26th and 27th. Those picking them up were to forward the certificates to their national Q-S-L distributors who would then distribute them locally.

ARISS International Chairman Frank Bauer, KA3HDO, says that approximately 130 hams will be receiving certificates. The event was held to honor the memory of the late Roy Neal, K6DUE who founded both the SAREX and ARISS programs. Neal, who also served as the Vice President of Amateur Radio Newsline and as a frequent news anchor passed away last August due to complications following heart valve replacement surgery. (ARISS, AMSAT BB)

**

WORLDBEAT: NEW ZEALAND TO ARGENTINA COMMEMORATIVE

ZL1AWW is working on plans for a commemorative station to celebrate the 80 th anniversary of the first New Zealand to South America two way contact. This, by Ivan O'Meara Z2AC and Carlos Braggio, RCB8.

The proposed date is May 22nd or 23rd. This original 10,300 kilometer Morse code conversation took place in 1924 and established a world distance record for two-way radio for that era. (GB2RS)

**

DX

In D-X, word that the Rodrigues Island 3B9C operation finally went QRT on Monday, April 12th. In their time on the air, the operators racked up a very impressive 153,000 QSO's. QSL this one as you were directed on the air. (OPDX)

**

THAT FINAL ITEM: THE NAB 2004 HAM RADIO RECEPTION

And finally, as most of you know, it was Heil Sound Limited hosted the National Association of Broadcasters ham radio reception on Wednesday night April 21st. It was literally a star studded event. Newsline's Bill Pasternak, WA6ITF, and his tape recorder were there:

--

When Bob Heil, K9EID, and his wife Sarah throw a party, everyone with a ham radio license shows up. And thats exactly the way it was on Wednesday, April 21st when Heil Sound Limited hosted the annual National Association of Broadcasters Ham Radio Reception at the Hilton Hotel in Las Vegas, Nevada. There was food music and lots of prizes. Some were even personalized:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

That was Bob Heil presenting only one of over a hundred prizes given out over the three hours of the gathering. We finally were able to corner Bob Heil and we asked him how this all came about:

--

Bob Heil Audio: Hear it at www.arnewsline.org

--

Somewhere between 800 to 900 radio amateurs attending the National Association of Broadcasters Convention literally had a hamfest of their own thanks to Bob and Sarah Heil. Thats up by an estimated 40% over past years. Sarah Heil says that for her husband, putting this reception together was a labor of love:

--

Sarah Heil Audio: Hear it at www.arnewsline.org

--

The 2004 NAB Ham Radio Reception sems to have set several records. More important -- a good time was had by all.

Reporting from near the Convention Center in Las Vegas, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

For those not aware, the annual Natrional Association of Broadcasters Convention in Las Vegas is the largest gathering of broadcasting and teleproduction professionals in the world. (ARNewsline (tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support

us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

OK, here goes:

Way back in the 1930s, hams began to replace their "blooper" (regenerative) receivers with "super-hets" (superheterodynes). The added complexity of the "super" was justified by the invention of the single signal crystal filter, which gave improved adjacent-channel selectivity.

Those early ham supers almost all used an IF around 455 kHz, because the available crystal filter systems worked best around that frequency. The better ones had one or preferably two RF stages before the mixer, to reduce image response and override the mixer noise. A top receiver of those days might have two RF stages and three IF stages, plus a couple of audio stages and the mixer and detector. And even so, image response was a problem.

After WW2, the trend moved towards "double conversion". The first IF was typically in the low HF region, to reduce images, and the second IF much lower, to get selectivity. Some designs like Collins kept the 455 kHz second IF, while many others (National, Hallicrafters) used a first IF around 1700 or 2215 kHz and a second IF of 50-60 kHz. Such a low second IF meant that LC circuits could be used for the selectivity.

Such receivers were arguably "better" - and unarguably more complex. Compare the prewar National NC-101X with the mid-50s NC-300, or a typical homebrew super of the '30s with an HBR. And while better in some ways, they were worse in others.

Then packaged high-frequency crystal filters were developed (about 1957), followed by improved mixer designs such as the Pullen mixer. It became possible to design receivers with a high IF for image rejection, no RF stages and a much reduced parts count. The Squires Sanders SS-1R is an example of such a design. It is simpler than, say, an NC-300, as well as smaller, lighter and less power-hungry.

There are lots of other examples. Compare an Elecraft K2 with almost any other current amateur HF transceiver - then compare the specs and

features. In many ways its high performance is a direct result of the relative simplicity.

Simplification can be an improvement. But simplicity isn't always simple, or easy.

If you use low loss feedline and a tuner, it doesn't much matter how bad
the antenna's
SWR is. Low loss feedline means that you don't lose much RF energy as
it bounced
back off the bad antenna to the tuner, and then back to the antenna.
Actually, lossy
feedline can make your SWR look better. The propagation delays of
these bounces
are of little importance for the narrowband modes we use on HF (SSB, CW,
RTTY
and such). I use some old Ethernet cable (essentially foam RG8U) to run
the feed
from the shack upstairs down to the basement, and there I switch over to
coax
more weather resistant thru a small hole in the wall (caulked to keep
bugs out) to the
vertical in the back yard. It's a pre WARC multiband HF vertical.

A major reason for bad antennas is a lack of space or place to install a
good
antenna.

CAP cadets can be 12 to 21 if they join before age 18, however the one's I
am addressing specifically are all between 15 to 17. (Ironically the 17 year
old is the one who has yet to upgrade!)

>> > And who's making the call on what's irrelevant and what's

>So if we get over 323,000 free upgrades to General with no testing and
>the ARS
>doesn't fall apart.....
>
>> > Isn't that the "call" of the person seeking Amateur licensure...?!?!
>
>Nope. A person might think that 20 wpm code tests given by FCC
>examiners are relevant and necessary to an Extra license, but they
>will have a hard time finding them today..

Point taken, Jim, but what I was trying (unsuccessfully) to say was that
it's partly the applicant's decision to decide if acquiring the knowledge or
skill was appropriate to gaining the license...In other words, are the benefits
of licensure worth the time and effort expended to get it...?!?!

Any better?

Steve, why can't you just admit that you were wrong? Huh?

Do you recall TAFKARJ commenting on those great >>>AMATEUR<<< CW Operators saving the day during WWII? When >>>AMATEUR<<< Radio was off the air?

Welp, there's another one who cannot admit that he was wrong. Ever.

Two peas in a pod.

>
> Dan/W4NTI

Dan, you're wrong again. You don't speak for CQ Magazine nor the
ARRL, though it appears that you would like to.

Steve, I happen to be married. Out of respect for my wife I don't
dredge up the velcroed past. But you do.

That's certainly true. But how many non-code-tested hams do you think
are actually making CW contacts of Field Day?

That all depends on the person. Some folks pick up contest operating
(in any mode) pretty quickly, while for others it's a real strain.

It's not called "radiosport" for nothing!
>
> hmmmm, I have to disagree somewhat.
>
> This is kind of putting CW on a pedestal.

Data modes get the same scoring on FD, and count as a separate "band".

Let's take FD as an example.
>
> I spend a lot of time planning, putting up antennas and tents and hours
> and hours of operating. Some of our CW ops help in this effort also,
> including the hardest working one out of the bunch. But some others
> simply show up and work a few hours, then go home.

Been there, done that - the hard work, that is.
>
> The point is, if you give extra points because of effort involved, then
> you have to decide what constitutes "effort".

It's not about "effort" so much as it's about "rewarding a desired
activity". That's why there are power level multipliers, all sorts of
bonus point thingies, and different classes of operation.

The spectrum efficiency of CW and data modes makes them worthy of the
moide multipliers.
>
> > In the contests in which I've participated, I have noticed that the best CW
> > ops can usually run more stations in less time because of the need for fewer
> > repeats than the best phone ops.

So much for Morse being "slow" and "error prone"...
>
> I have been amazed how quickly they can run. Humbled in fact. Adn I
> think that kind of flies in the face of those that say that CW is slower
> to work in a contest than SSB.
>
The point is not how many words are transmitted but how fast the
message gets across. The need for phonetics and repeats on 'phone
slows things, but the big slower-downer is the fact that if the other
op is using paper logs (still very common on FD) you can't go faster
than he/she can write. Which is normally less than 30 wpm.

> > On the other hand, less experienced people
> > can run phone contacts faster than CW contacts.
>
>If you compare the person to them self, that is true.
>
I'm not sure what that is intended to mean.

> > In my own contesting experience, my all time high was 310 contacts and it
> > was a CW contest. My second best was down around 150 contacts and it was a
> > voice contest. I'm running only 100 watts and wire antennas. I found it
> > much easier to break through pileups and bad conditions on CW. But it took
> > time to learn CW.

My best on Field Day was 629 contacts - all CW. Almost all S&P, too.
Plus 11 on 2 meter FM simplex during breaks. That was in 1B-1
category, which meant I had to do everyhting myself - setup, takedown,
etc. Also copied the W1AW message and sent a message report to the SM
(via CW, of course) for the bonus points. The W1AW message was copied
Saturday morning but the SM message was sent during FD.

All of this was with 100 W and wire antennas. It is by no means top
performance - really good ops with somewhat better setups (no beams or
high power, though) have done much better.
>
> But it took some time to learn just how to put a station together too.

>
> I'll defend testing CW, and I've been willing to put in a lot of effort
> to take my CW abilities to the "he stinks" level. But it sure seems like
> an unnatural advantage to have double points.

I think the mode bonus is more than justified by the spectrum
efficiency.
>
I remember when there was no mode bonus on FD. The result was that FD
was 'phone heavy and CW/data light.

--

Perhaps someone can explain a certain operating habit I hear on Field
Day - but only one 'phone:

I hear most FD 'phone ops repeating the *received* exchange. That is,
you'll hear:

"November Two Echo Yankee from November Three Kilo Zed, roger your One
Bravo Eastern Pennsylvania, OK on your 1B EPA, please copy my three
alfa ...."

Why do so many deem it necessary to tell me what I just told them?
Heck, I know what class and section I'm in!

On CW, the single letter "R" does the job, and some ops don't even
bother with the R - they send their exchange as an indication that
they got yours. Or they send "TU" - (thank you) which does the job of
"roger" and "73" both.

--

One other point: Neither FD nor SS have the signal report as part of
the contact. FD is callsign, section and class, SS is serial number,
class, callsign, check and section, plus date and time which you don't
have to send but which are part of the required logging.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of April 30, 2004:
Novice - 32,009 (decrease of 17,320)
Technician - 263,923 (increase of 58,529)
Technician Plus - 60,241 (decrease of 68,619)
General - 140,628 (increase of 27,951)
Advanced - 80,650 (decrease of 19,132)
Extra - 105,360 (increase of 26,610)
Total - 682,811 (increase of 8,019)

While one mode or the other may have an advantage due to better
conditions (or whatever) in any single given year, the Nov SS contest
has been run with CW and Phone weekends 14 days apart for many decades
(1st and 3rd weekends of November respectively). Without a SINGLE
exception, the average scores on phone weekends are significantly higher
than on the CW weekends, no exceptions. The reason is that the exchange
is faster on phone than on CW.

How to prove prior ham license ??

Herbert Fischer would like to show that he held a valid ham license (WN1UYH) in 1954 that required the 5 wpm code proficiency. Without the actual license, is there a way to prove he held the license? (Maybe a copy of the old CallBook page with his call would work?)

All suggestions welcomed.

AK

N2EY> them? Heck, I know what class and section I'm in!

Actually, we were told to do it at our site. The purpose of the
repeat is to ensure that information was transferred correctly. This
is relevant in real emergency communications as well as contesting, in
my eyes, and I think it's good practice.

N2EY> On CW, the single letter "R" does the job, and some ops don't
N2EY> even bother with the R - they send their exchange as an

Hopefully my code will be fast enough that I can observe the CW
station during FD this year.

Jack.

The last major DX contest was the CQWWPXPhone. But what does that have to
do with what your saying?

I don't claim to represent anyone, other than myself. Again what does that
have to do with things?

I simply want to assertain your credibility.

Give me a callsign and I'll look you up. I don't think 'William' is valid
for a ham call.

Well Jim, I think it means that phone ops are lids and real hams do it with
continous wave.

Not ironic at all; the 17 year old probably has more competing
activities. This is why it makes sense to market ham radio to middle
school and even the older elementary school kids. Most of the ones I
know are certainly smart enough and responsible enough to be hams.

>
> Any better?

I think what you're trying to say is that it's up to the prospective
ham whether the license earned is worth the "price" paid - where that
"price" is in the form of learning required to pass the tests.

One basic rule of marketing is that lowering the "price" of something
usually results in more "sales" - but not always. Lowering the price
of something is ineffective if potential buyers don't know about it,
or if they are not interested in buying the thing in the first place.
For example, I recall when VCRs were well over $1000 - there was lots
of demand but very few sales. As the prices came down, sales went up.
For me, the critical price was $300 - when I found a good VCR for
under $300, I bought it. Had a few since then - Beta gave way to VHS,
and the first VHS one I had wore out, etc. Now they are under $100.
But I'm not going to run out and buy another unless the present one
wears out. So VCR sales/prices have no effect on me right now.

NO doubt about that. My CW QSO's would be worth about 50 points if
learning effort was included!

>
> Why do so many deem it necessary to tell me what I just told them?
> Heck, I know what class and section I'm in!

Here is my take on why that happens. Most contacts I make ask QSL? So I simply repeat it back. Then I give them my exchange. I also say "please" copy (exchange) If I'm the person initiating the QSO, I generally don't. I actually heard a ham chewing another one out for saying Please copy (exchange)in the VAQSO party. Told him saying "please" made him sound like an idiot. I was next to QSO with him, and gave him the prettiest, drawn out pulleeeezze he ever heard.

> On CW, the single letter "R" does the job, and some ops don't even

That brings up a mini-beef I've had with CW ops. At one time, I was trying to copy on the air operations. It wasn't until I found that almost everything was abbreviated that I realized I was often copying correctly. It was like a code within a code.

Hamfests in recent years seem to have become less and less Amateur Radio, and more and more showcases for crippled trashed out computers, 7-generation-old software, Blockbuster-reject video tapes, and constantly yammering raffles.

So here's a poll ----

Would you travel 2-hours to support a hamfest which strictly limited itself to Amateur Radio material (new/used rigs, raw components, connectors, antennas, Amateur Radio software, radio clubs, radio retailers, VE sessions, ham radio forums, etc.) and prohibited sales of non-Amateur Radio items.

___ A. I quit going to hamfests for the reasons you state, but I'd come back to go to one like this.

___ B. I like the current hamfests, but I'd support one like you describe too.

___ C. I go to hamfests for all the clapped out computers and X-rated DVD;s and I ignore the radio stuff, so I wouldn't support what you describe.

Vote for one (and only one) choice.

Hans,

Really, we would like to see you stop this incessant childish
x-posting. Do you think you can control yourself and limit
your nonesense to one ng at a time? No, I guess not.

Phil has many errands for you to run, have you done any?

Lloyd

Good question Hans .... I go really for the opportunity to meet with the fellows one on one ....It is good to see fellow ops in person and the fests provide that ....however most of the fests are on Sundays and I am tied up with teaching Sunday School ....you know the job you get asked to take only for one year in 1974. I find that if I do go later most of the guys leave early as they snag the "needs" of the day.

his/her
> > > speed up to a really useful contest level.
Well I think most CW ops are in there at a minimum of several nights a week
....I try to get on ever night time permitting ....Speed ... 25 WPM I think
generally speaking ..... The CW op really doesn't practice as such but
just gets on the air and enjoys an efficient non-verbal mode.

Some of our CW ops help in this effort also,
> > including the hardest working one out of the bunch. But some others
> > simply show up and work a few hours, then go home.

Or really don't show up at all ..... I remember one fellow from our club who
had an antenna raising party on FD.

> On CW, the single letter "R" does the job, and some ops don't even
> bother with the R - they send their exchange as an indication that
> they got yours. Or they send "TU" - (thank you) which does the job of
> "roger" and "73" both.
> 73 de Jim, N2EY

I always ask the WPA section guys or even the PA guys or others where they
are at and how things are going ....a slight off topic tends top break up
the flow from time to time. I am not in there for blood or a free pass for
everlasting life due to a FD score. FD does present itself in many ways to
get the message out and get the public to see first hand an aspect of our
service. Heck ...we even give the cops free food ..I think the word gets
out on the police radio ...

I guess I'd have to say B if I had to just answer from your list.

But I don't have a problem with *some* decent computers showing up at
hamfests. My shack has three of them in it, and they are an integral
part of it.

Problem is that too many hamfests appear to have the computers I put
out on the sidewalk for riffraff day.

So I'm really a lot closer to your A answer. I'de really like a lot
more ham related stuff, and less computer junk and Ginsu knives.

Yes, buried in some dusty paper archive in a low humidity cave in Resume
Speed, Alabama. They won't go look.

But there's a commercial firm licensed to go into the catacomb and
search, which they'll be happy to do for a modest fee of about $122.85
per half-hour, results not guaranteed.

Hello,
I need some help in figuring out how to properly use a Spec. Analyzer. I have done several hours of research online now, and have somewhat of an idea of what I am doing, but I just can't get down one piece of the puzzle. In my line of work, we use simple devices that give us the noise floor level in dB. I (stupidly) expected to be able to get this same information easily out of a SA. As you may have guessed by now, I ran into a problem when switching the RBW value. After much... much reading, I fully understand *WHY* it changes (Filters increasing in size cause a greater internal noise level, etc.) but I can't figure the best way to get a "base" noise level reading. And as much as I would like to fully understand the theory, what I really need is a few more examples... IE: If you are looking a 100 MHz span and your RBW is 1MHz simply ___Fill in the Blank____ to find the base noise floor. To further explain what I am trying to do, we are setting up a link that requires a SNR of at least 6dB... I need to get the noise floor level to compare with my projected signal strength for this link.

Please be nice... This is my first post <grin>

Thank you! Thank you!

X B. I like the current hamfests, but I'd support one like you
describe too.

Trouble is, you'd be driving two hours each way to spend one minute at the
hamfest. I think eBay has been the kiss of death for hamfests.

It's not clear to me what noise you're trying to measure. If you're trying to measure the thermal noise of a good resistor, you're SOL -- anything you try to measure it with will add its own noise, which you'll end up measuring instead. You can easily calculate the thermal noise, though. If you're trying to measure the internal noise of the spectrum analyzer, the answer is on the screen and, as you've found, it's a function of the filter bandwidth. If you're trying to measure the noise coming from a receiver, it has to be considerably greater than the SA's internal noise, or you'll never see it. That means you'll have to amplify it until you can see it, with an amplifier that's quiet enough that the noise it adds isn't significant. The noise figure of the SA itself is typically much worse than a decent receiver -- it's been traded for dynamic range.

Once you get whatever noise you're trying to measure up to the level you can see it on the SA, you'll find that its magnitude also varies with the SA filter bandwidth, if the noise is broadband. You can get any S/N ratio you want, if you can tolerate an arbitrarily narrow bandwidth. A real receiver has some particular bandwidth to accommodate the incoming signal. It's usually this bandwidth at which the S/N ratio is measured.

Yes, Steve, the zero in my call is particularly applicable since it
represents the 10th Call District. I was licensed while stationed in
Nebraska. So I am a 10.

You are the Master of the Obvious.

But you are. Here is what you said again:

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

> Sorry you have a problem with it. No Amateur Radio = No MARS.
>
> It really is THAT simple.

That was your backpedalling recovery from making such a stupid
statement.

It is equally wrong as I have shown.

> >Do you recall TAFKARJ commenting on those great >>>AMATEUR<<< CW
> >Operators saving the day during WWII? When >>>AMATEUR<<< Radio was
> >off the air?
>
> Wake up knuckle head and crack some history books OTHER than the tained and
> antagonistic crap that Lennie spews.

TAFKARJ is our self-appointed historian. Even he will spout the dates
that the ARS was denied priveleges during WWII, but not in the same
post where Amateur Radio Operators saved the day in WWII.

It's one of those PCTA double standard things.

And don't forget that he also said that code testing was a barrier to
CW use.

> >Welp, there's another one who cannot admit that he was wrong. Ever.
>
> So far neither you or Lennie has "proven" Jim to be wrong. So far you
> have not proven yourself to be right...About ANYthing...

Of course we have. Time and again. But his most obnoxious
cheerleader won't hear of it.

> >Two peas in a pod.
>
> If that was supposed to be an insult, you missed...By a mile.

Then you haven't seen his reaction.

There used to be a set of callbooks for multiple years in the back room at the now defunct Maryland Radio. This room was used for VE tests and the store was in Laurel, so it is possible they may be in the posession of the Laurel VEC.

Hi Bill,

Welcome to the wonderful world of posting.

I'd expect noise levels to be specified in (nano)volts per sqrt(Hz), or (femto)watts per Hertz. This can be experessed in dBm, too, of course. If you know the noise bandwidth of the filter the SA is putting the signal through, then you just take the measured noise floor and adjust it by the ratio of that bandwidth to 1 Hz. So if it were a 10Hz noise bandwidth, the noise per Hz would be 10dB below what you see. If the filter is 100Hz, it would be 20dB below. Now, is the noise bandwidth of the filter the same as the resolution bandwidth? Not necessarily, but it should be fairly close, generally within a few percent. We build FFT-based spectral analysis equipment, and have to document the noise bandwidth of the effective filters, but we also generally have a way to directly display "noise density" which is already in v/rt(Hz) or w/Hz or dBm -- so it's worth looking to see if the analyzer MIGHT have such a function. -- It's worthwhile because of the variation from measurement to measurement to use as much averaging as is convenient. This might be called "video filtering", but is done after the signal filtering and detection. Lessee...what else. Normally, the base level noise of the analyzer would be measured with the input terminated in its input resistance, usually 50 ohms.

Footnoote about the bandwidths: the noise bandwidth (or noise power bandwidth) says if you have an input signal of, say, 1.000 picowatts per Hz, and it's uniform power density per unit bandwidth (a flat, broadband noise), and you measure 12.345 picowatts coming through your filter, then the noise bandwidth is 12.345Hz. That may differ from the -3dB bandwidth of the filter, though generally not by a huge amount. With analog filters, it's probably expecting a lot for it to be really the same from analyzer to analyzer of the same model, but with digital filters (not necessarily even FFT-based), it should be spot-on the same from one to the next.

Cheers,
Tom

<snippety>

I disagree. I've been (and continue to go) to several hamfests a
year. Although I have noticed some of the degradation you describe, each
hamfest/swap seems to differ depending on the area it happens in.

Examples: The two major Bay Area (California) swap meets, those
put on monthly by LARK and ASVARO, generally have a high content of
computer hardware and associated items. Granted, much of it is "trashed
out," but there are still Good Things to be found if one is sharp-eyed,
observant, and a good haggler.

Going further north and west: Once you get into Oregon and
Washington, the character of the ham swaps changes drastically, becoming
much more radio and test equipment oriented. I bought both of my service
monitors from vendors at local (to me -- Puget Sound region) swaps, and
I continue, every year, to see lots of assorted radios, both commercial
and made-for-amateur, and some good deals in test gear IN ADDITION TO
the assortments of computer and other goodies.

Anyway... With that said, let's move on to your poll.

> So here's a poll ----
>
> Would you travel 2-hours to support a hamfest which strictly limited
> itself to Amateur Radio material (new/used rigs, raw components,
> connectors, antennas, Amateur Radio software, radio clubs, radio
> retailers, VE sessions, ham radio forums, etc.) and prohibited sales of
> non-Amateur Radio items.

<snippety>

> ___ B. I like the current hamfests, but I'd support one like you
> describe too.

This one is my response. I've also seen cases where a couple of
the ham swaps have been "contaminated" by people selling utterly
unrelated-to-any-electronics-field items, such as stuffed animals and

(God help us) Mary Kay cosmetics. The best possible way to handle such intrusions is to, simply, vote with your wallet and IGNORE THEM. If such sellers fail to make money from a given venue, they will no longer set up at it.

I would add that, at least once a year, I make a scrounge run back to the Bay Area (I grew up there). I never fail to come back with less than 100 or so pounds of useful goodies as a result.

SHAMELESS PLUG ALERT! I have listings on my web site for some hamfests, and many of the electronic surplus places, on my web site. Start with the page:

http://www.bluefeathertech.com/technoid/swapindex.html

...And work forward from there.

Keep the peace(es).

Source record: 91471

The FCC has given all citizens a great tool, in the form of the ECFS, for commenting on matters under its purview, including matters related to the Amateur Radio Service.

I thank the Commission for providing that forum for commentary by all citizens.

Unfortunately, at least one citizen seems to have set himself up as the judge of what is appropriate and inappropriate for other citizens to say to the Commission.

This citizen has singled out to the FCC the comments of several other citizens as innapropriate and/or misdirected,

Here is a small sample of his attempts to choose for the FCC which citizen comments are not appropriate.

"I consider Mr. Sanford's Comment inappropriate as well as misdirected"

"I consider Mr.Brakob's Comment inappropriate as well as misdirected."

"Mr. Desany's Comments were found inappropriate..."

"Mr. Oring's Comments are once again found inappropriate..."

Sorry, Mr. Citizen, but the FCC doesn't need you to determine which comments are appropriate. ALL CITIZENS may comment.

Sunuvagun, where have I heard that before?

With all kind wishes,

de Hans, K0HB

What is the "Bandwidth" of the "stuff" you are trying to measure?
You could set the analyzer to that or a little less, and then use relative measurements.
You may need more gear if you are trying to measure a very low noise wideband preamp.
Depends on what you are trying to measure.
Bigger bandwidth=higher noise floor, simply kTB. and it is a ratio if you change kTB1/kTB2= B1/B2 (10 log it of course)

If you have the analyzer on, then connect the gizmo without signal and the noise floor rises up 10 dB or more, you could probably ignore calculating what the SA contributes. just add signal and it should be 6 dB or more above noise floor established by your gizmo.

If not, then It is possible to calculate almost exactly the noise floor on the analyzer to verify what is displayed is good, but you need a number or two from the MFGR of the analyzer, which takes into account the filter shape of the analyzer. (0.8 ot 1.6 something like that)

SAs are cool! What type do you have, makes a big difference, (depending on what you are trying to measure) Some will not do it.

There was a story many years ago. A buyer for a major cigarette distributor was in North Carolina buying several box car loads of Raleighs. The fellow representing Raleighs shook the buyer's hand and said, "You won't be sorry. Our formula now calls for 5% tobacco mixed with 95% horseshit."

The buyer looked surprised.

"Heck, give me six more box car loads. I never knew there was any tobacco in the damn things."

That is just about where the hamfests around here are. We're at 5% and barely holding. Ham radio related stuff has been diluted to the point that it is no longer visible without the use of long range optics.

"Unlikely. It is more likely a transformer would explode before you would see any home damage."

I disagree with this statement for the following reason. The flavor of BPL that allows the outlets in your home to be the internet connection, through the BPL modem, requires that the step down transformer from the 4 KV to 13.8KV lines be BYPASSED, primary to secondary, with capacitors to let the HF BPL signal around it. Guess what this will do. This implementation of BPL will let HF noise along with the BPL signal on the lines into your home, including all that lightening energy. This may actually help protect the transformer while the energy is directed into your home! Not all BPL equipment companies are going this way though.

K&#65533;HB, I have to agree with you that most "hamfests" in my area (upper Midwest) are more like "junkfests" or "fleamarkets" these days and I don't attend as often as I used to. It would be nice if they were to advertise these as such so at least you would know what to expect. I have not seen any major equipment dealers at any of the local fests, however, if you need parts or batteries or the like they are good for that. So, I would have to say my answer to your poll is A.

Hello, Hans

Well, I still have my novice license (issued in 1962). I got out of amateur radio (licensed then as N2JH) around 1981. Fortunately, when I decided to get back into amateur radio, I didn't wait for all of the giveaways (5 word per minute code or codeless tech license). Of course, some will still wait for the code to go away (and codeless techs be promoted to 1 star general). At my age, I couldn't afford to wait; besides, 20 words per minute isn't all the difficult - even after not hearing Morse since 1969 (with the sole exception of the movie "Fantastic Voyage"). ;)

BTW, the written exams aren't exactly "difficult", given that an 8 year old can pass 'em :))

Of course, some will still wait for the day they package amateur licenses in boxes of "Cracker Jax" LOL

Best regards from Rochester, NY

Hans,

They used to do something like that some decades ago. Free elections. You elect whomever you want. Of course, there was only one person to vote for. They also decided what was appropriate to say.

The U.S.S.R. fell apart a few decades ago, but that was one place that tried that - and failed. ;)

Ebay has hurt hamfests recently for sure. Presumably this will be eased when the buyers come to their senses, as the sellers are happy to sell items for more than what they cost new. The bubble will eventually burst, or we will have proven that inbreeding is more widespread than we thought.

In the meantime, buy new! It's often cheaper than ebay, and you get a warrantee!

I haven't been to a hamfest in more than 5 years, Hans, so I'll have to take your word for it.

From the late 1970s until the mid-1990s I was pretty much a regular at the 'fests within about 2 hours of my QTH. Would go as far as 3 hours for a biggie like Gaithersburg or Timonium.

I intend to go to a few local ones this summer, mostly to sell.

My main reason for nonattendance was that it became increasingly difficult to get that much free time in one block.

Another major reason was the want ad section of Electric Radio, and then the internet. Not just eBay, but the newsgroups and particularly the specialized email reflectors. Rather than haul lots of stuff to a fest and be at the mercy of the weather and attendance, I can trade, buy and sell online whenever time permits. Including answering other hams' "WTB" postings.

But it lacks the personal touch.

From my recollections, the trends you mention were already in motion more than 5 years ago. Some 'fests went so far as to explicitly forbid the sale or display of "adult" merchandise.

Definitely B.

And now a question for you, Hans:

Local hams with more tenure than me say that 40-50+ years ago hamfests were more of a social event and much less of a flea market. Hams would congregate by activity (traffic men, DXers, VHF/UHF, mobileers, etc.) and the tailgating was small and informal. The main draws were the socializing and the forums on various topics. They say that only since about the 1970s has the flea market aspect become dominant.

Any comments?

B. I like the current hamfests, but I'd support one like you describe
too.

I have friends who have gotten interested in amateur radio from going
with me to hamfests because they were into computers.

One of the more amusing stories I have heard regarding hamfests. it is
rumored to have happened at the Fulton County Hamfest in Wauseon Ohio.
It seems a lady saw the sign, pulledin and payed the entrance fee,
then asked, "whats with all the junk I see people selling, I'm hungry
where is the ham".

The ACLU and other groups known by acronyms would never go for that. People would be out something, they'd have to pay money to get them then. Maybe just mail them out to everybody unsolicited.

Alun, that come out with this bozo's 1st post about 2 years ago.
About the same time he buddy'd up with Bruce.

No, they must be hams.

I lived with hams on a DXpedition, last May (2003). All hams, a high percentage which were overweight.

I disagree.

Sometimes non-electronics items are offered at a significant discount. I have purchase mostly electronics items. I also purchased some non-electronics items. If I can get a good deal on these other items, why not?

As long as most of the items are radio and electronics related, whats the harm? Also, the non-electronics items contribute to the whole "flea-market" environment.

I am not "extrpolating" from just one experience. I have been to <many>
hamfests, ham radio meetings, field day setups, etc. I have noticed that about
most hams.

Thank you so much for all your help (Crazy George, Roy, Tom, John)!! Per Crazy George's suggestion, I am picking up some books tomorrow at Borders <grin>. However, the posts that I received were very helpful. Let me explain a little more what I am trying to do, just to see if I am even close to the right track. We have a Microwave link that operates at 5 GHz... specifically one sides transmits between 5.25-5.25GHz and receives at 5.725-5.825 GHz. The product we are using for this link is a Stratum 100 (http://www.commputercations.com/products/wsstratum.htm - The only datasheet I could find). This link went down hard a few days ago, so we switched polarization (From Horizontal to Vertical). Things got much better, but we still were taking corrupt packets. So, we went out there with an Advantest R3465 SA (http://www.ntecusa.com/graphics/pdf/WE106.pdf), an Omni antenna, and 10 degree directional dish, with the hopes to (1) look at the "same" noise floor that the Stratum sees and (2), try to track down any single direction (And hopefully antenna) that is causing interference. Now, I thought I knew this stuff <grin>, at least enough to retrieve somewhat accurate results. Boy was I wrong! I scanned the receiving frequencies using the following settings:

Start Freq: 5.725GHz
End Freq: 5.825GHz
Span: 100MHz
RBW: 5 MHz
VBW: 1 MHz
Sweep Time: 50ms
ATT: 10dB
REF: 0.0dBm (10dB/)

Knowing what I know now, I would have kept the RBW value MUCH lower (Like 10kHz). But what I saw was a "noise floor" - Which I was assuming to be (I believe) the Thermal noise floor which I now know to be the Filter Noise Floor, peaking out at about -64dBm. Now our receive strength when the radio is on is -65dB... So I figured "Hey, there is our problem... the receiver in the Stratum unit is seeing the noise floor so loud that it can hardly see the actual signal". What makes this even more believable is that these readings were taken in the middle of Boston on the 26th floor roof. So I packed up and went home... Then I tried the same test at my fairly isolated house... and got the same results!

Now I know there is at least one answer to how to avoid this embarrassing situation in the future... read a book (Which I will start tomorrow)... however, I really would like to get this link up in short order and need to know these numbers. Am I correct in saying that I need to (1) contact the manufacture of the Stratum unit, and find out what their Bandwidth filter

looks like and then (2), Set my RBW to the same or lower setting as their radio and do the test again?

If the above two steps are correct than great... I can do that... but I really would like to make use of the measurements I already took if possible.

Again, I really appreciate the comments from before. While I don't yet understand all of it, these really point me in the right direction, and I will keep reading/researching until it all comes together.

Thank you,
Bill B. - N1SNI

You are unbeleivable.

1) That ain't what you said; and

2) Even if it were it would be an indefensible position.

If we define a lid as being a bad operator, you are saying that anyone who thinks that one mode is better than another is a bad operator (unless they say that your preferred mode is better). I have never heard such idiotic cr*p in my entire life.

My only reason for preferring phone is that I like to use radio to talk. If you prefer to make bleeping noises instead I could't care less. If you were into SSTV, or PSK31 or what-have-you I would say that was fine too. On the whole, I would say that comparisons of bandwidth, throughput, signal-to-noise etc were only valid within one type of information, whether it is phone, or data or video, or whatever.

You said, and I quote "phone ops are lids" and then, partially recanting "not all phone ops are lids. Just the ones that think phone is better than CW". Well, I am a phone op and I think that phone is not surprisingly better at carrying voice information than CW is.

You know what, though, you are the lid.

3506. early telegraphs and relays

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-03 09:39:34 UTC
From: griffph@aol.com
Message-ID: <d698d3e7.0405030139.4cdbd0ed@posting.google.com>
Source record: 91493

hi there everyone

I'm currently reading a book called "Code" by Charles Petzold which is essentially a history and overview of computer technology, quite entertainingly told. I've just read the section on telegraphs and relays and am confused by something he has written.

He explains the basic principle of the telegraph, and goes on to show with some simple Ohm's Law calculations that you can't extend the length of telegraph wires indefinitely due to the loop resistance etc., hence the need for the invention of the relay.

However, I am a bit puzzled by his summing-up quote for this chapter: "Regardless of the thickness of the wires and the high levels of voltage, telegraph wires simply couldn't be continued indefinitely". Now I would have thought the restriction was *exactly* due to the limitations on wire thickness and voltage (ie the practical problems with manufacturing telegraph cables and voltaic cells at that time). Or am I doing Mr.Petzold an injustice, when perhaps there was some other limiting factor ?
I have read somewhere that there were problems with insulation for very long cables, is this perhaps something to do with it ?

Any thoughts you may have are welcomed,

best rgds

griffph

I assume these unit are the unlicensed variety and use spread spectrum technology (frequency hopping)? If interference is the cause, it may be hard to find since you probably don't know the discreet frequencies used in the hops. If I am understanding you correctly, you are looking for the ambient level of noise coming down your coax to the radio? I know just enough to be dangerous as far as spectrum analyzers go. We just plug the coax into the analyzer and see where the "fuzz" is located at the bottom of the display, i.e. -108 dbm.

I am not familiar with the radio you are using, but if it like the ones we use, can you swap frequency bands such as Band A or Band B? We have some Lynx and Tsunami 2.4 GHz T1 radios where the back filter unit comes off and we invert it to select another band of frequencies. Might be worth a shot if you can do it (to both ends of course!)...

Good luck! Let us all know what you find!!

Who is this individual? Does he have a name? An amateur radio
callsign?

Of course. In fact, noncitizens may comment, I think. Not only that,
but organizations and business concerns may comment as well as
individuals.

The problem is that any system which is as free and open as ECFS is
bound to attract at least a few folks who are not serious about the
subjects being discussed. And it will also attract all sorts of folks
who have an "agenda" that isn't immediately apparent.

Hopefully those at FCC who read the comments will recognize the nature
and spirit of such remarks.

I noticed the same practice on some of the other petitiions. The FCC marks them as duplicates, not sure if they're given equal (or any) consideration.

The name of the citizen is not important (and I didn't say it was a
"he"). No amateur radio callsign was evident in any of the persons
comments (dozens of different submissions on several recent RM's)
although the person did claim learning Morse code to the speed of 8WPM.

I just thought it presumptous for that to tell the FCC that other
citizens comments were innapropriate.

isn't it just as bad that you come in here and throw dirt at an unnamed
citizen for the wording of their comments? and not even knowing if they
read here to defend themselves?? or do you know that they read this forum?

I specifically avoided naming the individual so as not to disparge
anyones good name in a public forum.

And unlike you, I have the balls to identify myself, not take anonymous
potshots from behind noone@nowhere.

(Or perhaps you really ARE noone worth paying attention to.) >>PLONK<<

With all kind wishes,

Probably due to the cumulative C and L of a long wire eventually shaping
the waveform so that rise and fall profiles are smeared.

I beleive they used to add inductors to telegraph wires at intervals before
they had repeaters. This seems counter-intuitive to me, as I would have
thought the L was more of a problem than the C. Does anyone know the
correct explanation?

Makes perfect sense to me. A parallel L would cancel the distributed C.

> very long cables, is this perhaps something to do with it ?

It's simply a matter of a poorly-written sentence. It should read
something like 'could not be economically or practically continued
indefinitely'.

In theory, a basic telegraph circuit could be any conceivable length
if there is no limit placed on the size of the wire used nor the
battery voltage. But in the real world, there were very definite
practical limits to how thick a wire could be used, and how high a
battery voltage could be used. And the economics of the hardware used
were a major consideration.

The early transatlantic telegraph cables were thousands of miles long
and used *no* repeaters or relays along their route.

For a more detailed historical account of the telegraph and its
development, I suggest the book "The Victorian Internet"

Your Software Must be robust enough to accept, reject and process corrupt packets as you will Always get them with wireless, always. --You will ALWAYS have bad/corrupted packets with any wireless system.-- The 5 band antennas have very splintered patterns, and ducting from point to point. and you will have +20dB one second and -20 the next second, your firmware, and software must handle this stuff, RF cannot do it alone. Mother nature set the rules on this one.

The MFGR will tell you the max range, and the dishes to use, rain degrades the signal, as well as heat (ducting) The big boys use 4 dishes for a link ATT @ 11 Gigs two on each side spaced vertically some so when ducting occures, the other dish picks it up. If the cost is low enough, you could put in another entire link as backup. Also % of packets getting though is an indicator of SNR, but that can depend on how you have the link hooked up, as a LAN extention, you have timing constraints, and so on. 90% or better is great. Less than 20% you may have a link or LAN timing problem (path too long, pointing is off, ducting, SW lame).

On a roof in Boston, your 5 gig unit may be susceptible to radio and TV interference, the scan may be detected on a junction in the unit. Signal blasts through the case and so on. Urban RF is a dirty world, and we can't see it either!

> [...snip...]
> If you're trying to measure the noise
> coming from a receiver, it has to be considerably greater than the SA's
> internal noise, or you'll never see it.

Assuming classical "noise" as we are all probably thinking...
First, a minor correction to the above "considerably greater", Roy. If the EXternal noise is just 6dB above the SA's INternal noise (I guess 4 times can be considered 'considerable'), then the resulting displayed value will be only 1 dB higher than the incomming noise actually is. Noise power (when combining in one receiver) simply adds. To see the math, think this way. A 1 dB increase amounts to 1.25 times the power. That extra 25 percent is one fourth the original power. 25% of the power is 6dB down from the original. SO adding some power which is -6 dB (or 25% the original) will raise the total 1 dB.

However, The poster used the term "noise", but doesn't know the source of his problem. His data hits can be caused by other than what we are thinking is noise. It can be (sounds like since it recently started) spurious signals in his channel OR it could be IM being caused from strong signals getting into his receiver. The spurious in-band stuff could be narrow signals or wideband. Typical CDMA signals behave much like simple wide-band noise as we think of noise. A narrow band signal/spur is different.

From a later post I see that he is trying to measure some junk that has appeared on the link frequency causing interference. In any case, the front-end noise floor (noise figure) of the SA will determine how far down you will be able to see and if it is not low enough, then you won't see the interference. I can not comment on the Advantest sensitivity. If you have access to a low noise amplifier of the type used in your system, it can be used in front of the SA and *MAY* raise the sensitivity (lower the noise figure/floor) enough to see yout interference.

Good luck. We've had a strange low level (around -123 dBm)spur on our repeater input since last fall and can't locate it...wish I had lotsa time.

As we aged we moved OUT of a condo. Too small for our needs and too
many restrictions, although I was able to put up 4 vhf/uhf verticals
and a 200-foot long wire.

Young thirty-something family members, though, moved into a rental
condo and one of their conditions was an internet connection "in the
wall" - no problem finding it in any place that they looked.

Finally, installation of small-dish satellite antennas for delivery
of broadcast and video services (including internet) has better legal
pre-emption than we hams have with PRB-1.

That's what happens when the gov'mint is forced to privatize what we
should be getting in return for our taxes.

Federal Archive searches are not all that bad (I had to do it once)
provided that you know the box number in which the desired material
is stored. The agency has those lists, but finding the right person
in the agency to give you the magic number is an exercise in itself.

The Leo Ryan National Archives Repository in suburban San Francisco
is in a delightful park adjacent to the vast open green space known
as the Golden Gate National Cemetery. I've been in "big box" retail
stores that had less aisle room. I understand that now you give
them the box number and they bring it to you in a library-type
reading room.

I think you indicated that the citizen is a male, Hans. From your post
that originated this thread:

"at least one citizen seems to have set himself up as the
judge"

and

"sample of his attempts to choose"

That's why I thought the citizen was a he.

> No amateur radio callsign was evident in any of the persons

It should be a simple matter to correlate the citizen's name with the
FCC callsign database. Have you done so?

I wonder if my comments were commented on. I wonder if I was referred
to as "Mr."....
>
> I just thought it presumptous for that to tell the FCC that other
> citizens comments were innapropriate.

Of course - but that won't stop some people.

In fact, a large volume of such commentary says more about the commenter than about those commented on.

In any event, I say let the comments speak for themselves.

Yes, your comments were commented on.

You were simply called "Miccolis", without the appellation (or is that Appalachian?) "Mr."

The citizen commented that "There is a decided ignorance of the tasks of other radio service operators displayed by Miccolis." and "Miccolis' remarks must be taken as due to his ignorance of the radio world outside amateurism."

And your FCC submittal "has a number of errors and disconnections which require correction." Please see to that at your earliest convenience.

Further, your comments were "a decided insult to the broadcasting industry, civil aviation, maritime world, and all of those services which enable constant communications by means of radio." Would you please make it a point to apologize to those good folks as soon as practicable?

> WA3MOJ

First, the circuit techniques for UHF receiver front ends and
transmitter PA's are totally different than those on 11 meters.
Conversion becomes wholesale replacement of about half of the radio.

Second, <<`ALL'>> CB radios must be type-accepted by the FCC for use
on the air. Unless you have the thousands of dollars for R&D, and
legal assistance to complete this, forget the whole thing.

What you are trying to do is tantamount to modifing a VCR into a
satellite uplink to jam television satellites. Can't get there from
here, No how, now way. Zip. Nada. The BIG goose egg.

Now you could use UHF commercial radios on the GMRS (former Class A CB
channels) with very little problem. Just change crystals or reprogram
the synthesizer in the radio, tweak, and you're in business. Any
competent two-way radio shop can do that.

I'd suggest you study a LOT more on basic electronic theory, and
circuit design before you post such an asinine question.

Oh, and one more thing Alun. Why is it you don't think CW (Morse Code) is talking ? Do you think we just sit in front of the radio and send random characters? Or even random words?

Comunications is the 'exchange of information'. Are you actually that ignorant Alun?

Hey Hans.

I went through and read the comments from the good poster, and I am amazed that the perp would treat the public comments as he would the newsgroup - that is to attack those he disagrees with.

In the comments even more than in the newsgroup, it is imperitive that the attacking comments be given the respect they deserve, and utterly no reply from those attacked.

To do otherwise is to invite the inclusion of your comments with his, and having what may be a reasoned assessment look like one of the strange little brawls that is the embarrassment of the ARS.

The public comment forums are just that. He is welcome to make all the personal attacks he sees fit, and the F.C.C. will just eventually consider the source.

Bert,

Nice to work you on 40M this evening. How is that new Argonaut working?

Let's plan on same time next Monday eve, and maybe some of the others
will join in.

Thanks Hans, I had a ball. Pride refused to let me ask you to QRS. (Although I probably should've, hihi.) It forced me to put down my pencil and just listen. Same time next Monday sounds fine to me. Thanks again. :-)

I didn't need to go play along this far to find the answer. I went to
the comments page, typed in one name in the search field and had the
answer in four or five minutes. The comments were what I expected.

Sorry I missed Jim. I had a lot of DSP working to isolate you from that buzzy signal from W5TVW. He was actually about 625 Hz off our QRG, but that rough buzz on his signal was washing over you. Likely would have heard N2EY without the DSP laundering I was doing.

CU next week.

Gentlemen ....gentlemen ......I think this can be solved in a civilized manner ......What we need is a Texas Death Match. I would add a cage of barbed wire (non-resonate) of course with the key to the locked door suspended by 20 feet of ladder line above the center of the mat. There would of course be allowed one foreign object per contestant. Dan my choice for you would be a vintage Vibroplex bug attached to a 4 foot length of quarter inch cable. Alun you of course would have to use the same cable set up but with a D-104 at the end. We would let Alun fill the 104 with lead shot to even things up. The winner would be presented with the World No Lid Belt. Ya know this would probably be a lot more interesting than most contests I have been involved with over the years.

Take care guys .....remember peace in the valley ..... Tom KI3R

Dear me, I managed to do all that in a few paragraphs of comments? All
I did was say that I'm against some parts of the various proposals and
in favor of other parts.
> >
> > 73, de Hans, K0HB
>

Well, it was never my intention to insult anyone or any industry with
my comments on the requirements for an amateur radio license.

So let me ask those who have read my comments to the FCC on the various restructuring proposals (most recently RM-10867, -10868 and 10870):

Are *you* insulted by anything in my comments? I'm not asking that you agree with them, just if you find yourself insulted by my comments to FCC.

On May 8, 1911 Captain Washington I. Chambers prepared requisitions for two Curtiss biplanes. One, the Triad, was to be equipped for arising from or alighting on land or water; with a metal tipped propeller designed for a speed of at least 45 miles per hour; with provisions for carrying a passenger alongside the pilot; and with controls that could be operated by either the pilot or the passenger. The machine thus described later became the Navy's first airplane, the A-1. On July 1, 1911 the A-1 was delivered to the Navy.

Perhaps, not the people at the "DXpedition", but (a long while ago) I have mentioned some of my observations to hams at hamfests, and club meetings.

I wasn't insulted by anything in your comments but I'm a radio amateur.
If I was a total outsider, the type who might be miffed because mere
radio amateurs didn't show me the deference I thought I was owed, given
my PROFESSIONAL standing, I might have taken umbrage to your comments.

ARRL BOOK ON INTERNET LINKING

VoIP: Internet Linking for Radio Amateurs
-- by Jonathan Taylor, K1RFD
Growing numbers of hams are using VoIP, or Voice Over Internet Protocol, in combination with their radios for long-distance communication spanning hundreds or thousands of miles. They're using the Internet as the relay between their base stations, handhelds and mobile transceivers.

This is a guide to the four primary VoIP systems used by hams: EchoLink, IRLP, eQSO and WIRES-II. The book is designed for beginners who need information on how to set up and use these systems, but it also provides plenty of technical "meat" for those who want to dig deeper and explore how the systems actually work.

Contents:

Connecting The World
Using A VoIP Link
Conference Servers, Reflectors and Nets
Other Linking Systems
Setting Up Your Own Node
Digital Audio and the Internet
Under The Hood: Echolink
Under The Hood: IRLP
Legal Issues In Linking
Web Resources & Glossary
This may be the first book ever written about ham radio applications of VoIP! Author Jonathan Taylor, K1RFD, is the creator of EchoLink and one of the top experts in Amateur Radio Voice Over Internet Protocol. He is a member of the American Radio Relay League.

First edition, ï¿½ 2004, The American Radio Relay League, Inc.

Quoted by whom?

No mode "always gets through". But Morse/CW often gets through when
none of the other available modes can.

--

IIRC, 7037 was the QRG of choice last time, and it worked well. We
only need a few Hz anyway...

I certainly was but I left all the *PROFESSIONAL* baggage behind several
years ago. Now I'm simply a radio amateur. I do feel quite qualified
to comment on matters relating to amateur radio regulation. Like you,
I'm an active participant in amateur radio.

For cryin' out loud, Jim!
The short answer is no.

The liddle bit longer answer is - to my knowledge, you have never
stooped to insulting anyone here.

The longer answer is that we are talking about a person that calls you
"The Reverend Jim", calls me a hockey puck, calls Dave various
disparaging names dealing with German heritage, suggests that people
that disagree with him get mental counseling or that they appear to have
a drinking problem - and those are the ones I can think of offhand.

My point is that he knows full well what insulting is, and insulting is
what you isn't.

Shame on ya for even asking the question, and giving the accusation
even a bit of credence! 8^)

A good CW operator could out operate a phone operator with less power, less equipment, and worse propagation.

Dan/W4NTI

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

> >It is equally wrong as I have shown.
>
> You've "shown" nothing.

I've shown that a person neither has to be an amateur radio operator,
nor a military personnel to be in MARS. That was another one of your
stupid assertions.

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

> >> >Do you recall TAFKARJ commenting on those great >>>AMATEUR<<< CW

>>
>> No Amatuer Radio = No MARS.
>
>" Sorry Hans, MARS >>IS<< "Amateur Radio". "
>
>> >It is equally wrong as I have shown.

You've only shown that you don't understand the relationship between the
Military Affiliate Radio System and the Amateur Radio Service.

Your problem, Your Putziness...Not mine;

>> You've "shown" nothing.
>
>I've shown that a person neither has to be an amateur radio operator,
>nor a military personnel to be in MARS. That was another one of your
>stupid assertions.

And I did acknowledge that there ARE a FEW people in MARS who are neither.

I had stated that almost from the outset. You DID point out ONE person
who was neither a licensed Amateur nor military person assigned as official
duty.

It still does not make my statement any less true.

No Amateur Radio = No MARS.

>" Sorry Hans, MARS >>IS<< "Amateur Radio". "

YOU repeated it again, Brain. It's the only way you can slide out from
under the truth.

>> >TAFKARJ is our self-appointed historian. Even he will spout the dates
>> >that the ARS was denied priveleges during WWII, but not in the same
>> >post where Amateur Radio Operators saved the day in WWII.
>>
>> You'll have to show me the post wherein Jim "appointed" himself.
>
>No, I won't have to.

I know you won't.

You can't.

You've stated that Jim Miccolis has somehow "appointed" himself to some
imaginary post.

Of course you ignored the fact that your "mentor" is far more guilty of
ravaging this NG with "historical" ramblings 100-to-1.

And if you DID try to "show" where Jim alledgedly appointed himspelf to
ANY post, you would, of course, be lying.

>> And as far as "self appointed historians" go, you had better survey
>some
>> of the posts your scumbuddy has put up here...More than a few way off
>Amateur
>> Radio topic and in the thousands of bytes of bandwidth.
>
>Carl spanked you for wasting bandwidth, and here you are... again.

He didn't spank anything, Brain.

And it seems to me that you're just as equally cupable.

>> >It's one of those PCTA double standard things.
>>
>> I think YOU need to read what you write before YOU assert any "double
>> standard" allegations, Your Creepiness.
>
>It was well thought out. That is precisely why I used the phrase,
>"PCTA double standard."

As for "double standards" your admonishment about what Carl alledgedly did and then wasting reams of bandwidth to (unsuccessfully) engage me over the relationship between the MARS program and Amateur Radio is one of them.

Got your britches around your ankles, Brain, and the picture ain't pretty....

>> >Then you haven't seen his reaction.
>>
>> It's not about what >>JIM<< may percieve as an insult, Brain.
>
>There you go assuming again.

I am not "assuming" anything, Your Wimpiness.

I said this is not about what Jim perceives, and that's true.

>> But you never do seem to keep your perspectives in order, do you?

>Yep. You're nuts and I'm not.

>" Sorry Hans, MARS >>IS<< "Amateur Radio". "
>
>Pffft.

You're the one who keeps repeating that, Brain, not me.

>>I<< keep saying No Amateur Radio = No MARS.

That is true. MARS is dependent upon Amateur Radio for it's own existence. If you can't accept that, then you're everybit the idiot I have reason to believe you are. You welcome to try and disprove it, however you've littered the NG with so much evidence to the contrary that you'll be at it for a verrrrrrrrrry long time.

Why don't you just admit that, once again, you tried to make an issue from a non-issue and got your private parts caught in the zipper. I have a pair of tweezers and a steri-strip to bandage it with, if you need it.

Now...About those T5 logs.....?!?!?

Steve, K4YZ

3593. RILEY SAYS K1MAN BROADCASTS ARE LEGAL

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Amateur Radio license K1MAN

Dear Mr. Baxter:

This letter explains in what ways your Amateur station has come into compliance with Commission rules since our letter to you of January 29, 2002; and notifies you of two areas of operation that, if not corrected, will lead to enforcement action against your license and/or designation of your renewal application for a hearing.

By letter dated January 29, 2002, the Commission notified you that your understanding of various Amateur Radio Service rules was incorrect. We outlined your apparent misconceptions regarding station control, publishing a transmitting schedule and how that related to interference, threats made to licensee complainants, including threats made with so-called "felony complaint affidavits", broadcasting and broadcasting of tape recordings and telephone conversations.

The January 29 letter detailed complaints received by the Commission, and explained that your method of station control, i.e., "a timer from Radio Shack", did not achieve compliance with the Commission's Rules when you were not present at the control point for your station and, therefore, did not satisfy the Commission's Rules regarding automatic control of a station. We explained to you that to comply with the Commission's Rules you must be at the transmitter, or at the transmitter control point, every moment your station is transmitting when your station is locally or remotely controlled; and that if the station is controlled by telecommand from the control point using a radio link, the frequencies used for telecommand must comply with the Section 97.201 requirements for an auxiliary station (may transmit only on the 1.25 m and shorter wavelength bands, except 219-220, 222-222.150, 431-433 and 435-438 MHz segments).

By letter dated March 4, 2003, the Commission's Boston Office notified you that Commission monitoring and numerous complaints filed with the Commission indicated that the problems outlined in January 2002 had not been corrected. The letter stated that your Amateur station was apparently being used for broadcasting various programs having nothing to do with Amateur Radio; and that transmissions from your station

were being used for deliberate interference and for communications in which you apparently had a pecuniary interest. The Boston Office letter stated that transmissions started and ended erratically, were sometimes repetitive and abruptly ended with no identification as required by Commission rules, and that such operation indicated that the transmissions were not under proper control of a licensed operator. The letter noted also that you continually broadcast notices of so-called "felony complaint affidavits " that you claimed to have filed with the United States Justice Department against other Amateur Radio licensees whom you perceived to have interfered with your broadcasts, or refused to relinquish their operating frequency to you.

The Boston Office's letter stated that transmissions from your Amateur station included references to a degree program and directed listeners to your website that advertised an "American Radio School Technician Degree in Electronics" for "$299.95". On that web site you solicited donations for radio equipment, advertised a credit card, and solicited donations and advertised for "IARN" and "AARA". The letter from the Boston office pointed out that such use of your station was in apparent violation of Section 97.113(a)(3) of the Commission's rules, which prohibits "Communications for hire or for material compensation, direct or indirect...." and "Communications in which the station licensee or control operator has a pecuniary interest..."

The letter from the Boston Office requested that you provide substantial additional information about the operation of your station, including submission of a log detailing the information on a weekly basis until further notice. In January 2004, the Boston office notified you that you could discontinue the log submissions, and referred the case to this office.

We have reviewed the information you submitted, as well as numerous complaints filed against your station. Additionally we have reviewed tape recordings made by Commission personnel of your transmissions at various times during 2003 and 2004 subsequent to the Boston Office letter of March 3, 2003.

It is the finding of this office that you are, with some exceptions, generally in compliance with the Commission's rules in the Amateur Service related to broadcasting and information bulletins, and we explain as follows. Broadcasting is prohibited in the Amateur Radio Service, with some exceptions. Section 97.3(a)(10) defines broadcasting as "transmissions intended for reception by the general public, either direct or relayed." One-way transmissions are limited in the Amateur service, but an exception is allowed in Section 97.111(b)(6) for "Transmissions necessary to disseminate information bulletins."

Information bulletins are defined by Section 97.3(a)(26) as messages "directed only to Amateur operators consisting solely of subject matter of direct interest to the Amateur service." There are no specific time limits placed upon information bulletins by Commission

rules. A review of your programs at random times since March 3, 2003 indicates that your transmissions were directed to Amateur Radio operators, not to the general public, and that the individual bulletins were related to the Amateur Radio Service. The only notable exception was the offering of a reward for information leading to the identity of parties making threatening telephone calls to you.

The station control problems outlined to you in warnings from the Commission appear, with minor exceptions, to have been corrected. During the monitoring period your station abruptly ended transmission with no identification in one instance, and started transmissions in mid-sentence in another instance.

There are, however, two areas in the operation of your Amateur station that must be corrected in order to avoid enforcement action and/or a designation of your renewal application for hearing to determine if you are qualified to remain a licensee. These are: 1) deliberate interference resulting from your commencing operation on top of ongoing communications, in violation of Section 97.101(a) and (d); and 2) use of your Amateur station for pecuniary interests, in violation of Sections 97.113(a)(2)and (3).

Regarding deliberate interference, we receive continuing complaints, and our monitoring verifies, that your transmissions start up on top of existing communications of individual licensees as well as nets such as the Salvation Army Team Emergency Radio Network. Such operation constitutes deliberate interference. Stations engaging in ongoing communications are not obligated to stop transmitting when K1MAN wants to start transmitting on a frequency, and complainants are so advised by the Commission. You appear to believe that the publication of a transmission schedule gives you the right to begin transmitting on a certain frequency at a certain time, even if the frequency is occupied. It does not.

All frequencies in the Amateur Radio Service are shared--no frequency is assigned for the exclusive use of any station, and your Amateur station has no greater rights to a frequency at any particular time than any other Amateur station. Section 97.101(d) of the rules prohibits an Amateur station from willfully or maliciously interfering with any radio communication or signal. Moreover, publishing a schedule is merely one of the several conditions necessary for the control operator of a club station to accept compensation for transmitting information bulletins, pursuant to Section 97.113(d) of the Commission's rules. Your station K1MAN, however, is not a club station.

Regarding use of an Amateur station for pecuniary interest, we note that your Amateur Radio program transmissions regularly advertise your web page at www.K1man.com, and on those pages you advertise items for sale by the American Amateur Radio Association (AARA), including T shirts, hats and a "Technician Degree Diploma". You advertise the sales commissions and "overrides" that your State Directors and

Section Managers can receive, and detail ways in which your Section Managers can earn money by recruiting members, selling hats, name badges or T shirts.

Section 97.113(a)(2) prohibits communications for hire or for material compensation, direct or indirect, paid or promised. Section 97.113(a)(3) prohibits communications in which the station licensee or control operator has a pecuniary interest.

We remind you that any attempts to threaten or intimidate Amateur radio licensees operating on the Amateur bands will reflect adversely upon your qualifications to remain a Commission licensee, and would be the subject of a license revocation or renewal hearing. By letter dated December 11, 2001, you were warned against the sending of your so-called "felony complaint affidavits" to various Amateur Radio licenses that you perceive to either cause interference to your station or which do not relinquish to you the frequency on which they are operating.

Complainants were advised by the Commission to forward any such "affidavits" they received to the Commission, and that they could otherwise be ignored. The United States Attorney for your jurisdiction also warned you that the mailing of such "affidavits" is contrary to law. Apparently you have discontinued those threats. We also remind you that, in regard to the taping and broadcasting of telephone calls, you must comply with applicable state laws.

In conclusion, failure to correct the deliberate interference caused by K1MAN, and the continued use of K1MAN for pecuniary interests, will lead to enforcement action against your license. Either would be sufficient to designate your renewal application for an evidentiary hearing to determine if you are qualified to remain a Commission licensee.

An adverse finding in regard to threats to complainant licensees, or violation of state law regarding recording and broadcasting telephone conversations, would lead to enforcement action against your license and would be sufficient to designate your renewal application for an evidentiary hearing to determine if you are qualified to remain a Commission licensee. You would have the burden of proof in such a proceeding.

You should be aware that in 1990, the Commission revised its character qualifications policy, expanding the types of non-FCC-related misconduct that it would consider as bearing on licensee or applicant character qualifications (Policy Regarding Character Qualifications in Broadcast Licensing, Policy Statement and Order, 5 FCC RCD 3252 (1990) (Character Policy Statement), recon. granted in part, denied in part, 6 FCC Rcd 3448 (1991), further recon. granted, 7 FCC Rcd 6564 (1992). The Commission concluded that "a propensity to comply with the law generally is relevant to the Commission's public interest analysis, and that an applicant's or licensee's willingness to violate other

laws, and, in particular, to commit felonies, also bears on our confidence that an applicant or licensee will conform to FCC rules and policies. The 1990 Character Policy Statement applies to Amateur Radio licensees just as it does to all other FCC licensees (See, e.g., Herbert L. Schoenbohm, Decision, 13 FCC Rcd 15028 (1998), recon. denied, 13 FCC Rcd 23774 (1998), aff'd in part, dismissed in part sub nom. Schoenbohm v. FCC, 204 F.3d 243 (2000), cert. denied, 121 S. Ct. 405 (2000); Leslie D. Brewer, Order to Show Cause, Notice of Order of Suspension, Notice of Opportunity for Hearing, and Notice of Apparent Liability for a Forfeiture, 16 FCC Rcd 5671, licenses revoked, 16 FCC Rcd 12878 (2001).

Accordingly, we will continue to review the operation of K1MAN in light of the issues outlined above.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director
Honorable Paula D. Silsby, United States Attorney, US Department of Justice, District of Maine
Timothy D. Wing, Assistant U.S. Attorney, U. S. Department of Justice, District of Maine

---

NOTE: Issuance by the FCC of a Warning Notice indicates that the FCC has what it believes to be reliable evidence of possible rules infractions and not necessarily that the recipient has violated FCC rules. The FCC has the authority, pursuant to §97.519(d)(2) of the rules to readminister any examination element previously administered by a volunteer examiner. These enforcement letters are representative of recent Advisory Notices, Warning Notices, Notices of Violation and other FCC communications to licensees and others involving possible serious rules violations. Unless otherwise indicated, all letters were signed by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth. This listing is not a comprehensive record of FCC Amateur enforcement actions. Follow-up correspondence will be published as provided. Address all inquiries regarding this correspondence to FCC Special Counsel Riley Hollingsworth, rholling@fcc.gov.

A good operator (CW or any other kind) wouldn't say "(insert mode here)
operators are lids".

3596. Re: RILEY SAYS K1MAN BROADCASTS ARE LEGAL

The best thing that could happen to Amateur Radio would be for K1MAN to
be taken off the air.

3597. Let's debate: Should Amateur Radio be made a free for all?

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-06 04:03:56 UTC
From: daviesl2003@aol.com

I think that since Morse Code is old, but not completely useless, I feel it should no longer be made to be learned to gain access to the HF bands.

Do I feel that Amateur Radio be made a free for all? No, it should not. There should be a test, but not a really hard test, but not a easy one either.

I'll even admit, I'll never get a new Icom 7800, at $10,000.00 - I'll be lucky to maybe get a used 706 at about 400 or 500 or so.

The ITU requirement for a code test was dropped on July 5th, 2003, so evidently a majority around the world agree with you. I think the FCC will drop it, but they move at a snail's pace. I didn't think it would survive for as long as a year after it was no longer needed, but it's only nine months so far, so I could still be right.

I don't know, Alun. I'd wager that more than a few PCTA's have made their feelings felt to the FCC and, more importantly, to their local elected representatives. (Some of whom have a say re. the FCC's bugdet.) Perhaps it might be more than a year...much more.

>
> I don't keep repeating that statement, Your Sliminess...YOU do.

Why is that, Steve? It's a wonderfully stupid statement. I enjoy
attaching it to your name.

So, if you want vindicated for making such a wonderfully stupid
statement, you can look in the Army, Air Force, and Navy regulations,
as well as Part 97, Title 47, and give me -any- citation whatsoever
where your statement, " Sorry Hans, MARS >>IS<< "Amateur Radio", "
is substantially true.

No, I don't expect Hans to be named in any regulation. That's not
what I'm after. Forcus on the part where you said, "MARS >>IS<<
"Amateur Radio."

That is all. And since you're probably a radio volunteer for all
three services, and an amateur radio operator, you should be able to
vindicate yourself in short time.

Best of luck in making me eat crow. Hope you enjoy yours.

I've lost track of how many different unflattering nicknames and
descriptions have been applied to me here. I think that sort of
behavior says a lot about the person writing the stuff.
>
> My point is that he knows full well what insulting is, and insulting is
> what you isn't.

I know what *my* idea of insulting is. I'm just checking what others
think, including those who disagree with me on license issues (such as
Hans, K0HB). Did you read my comments?

> Shame on ya for even asking the question, and giving the accusation
> even a bit of credence! 8^)

I hope I did not insult you by my question...

I don't know whether such reply comments make any difference to FCC. I
do know that I will take K2ASP's excellent advice and example and not
reply in kind.

Rent it. You won't be dissapointed. Gene Wilder, Marty Feldman, Teri
Garr, Madeline Kahn, Cloris Leachman, Peter Boyle and even Gene
Hackman.

> > I was never a Mel Brooks fan, and
> > I believe that was one of his, wasn't it...???

One of his best, although it's tough to pick from among classics such
as "Blazing Saddles" ("Mongo is but pawn in game of life" and "The
Producers" ("Boids. Doity, stinking, disgusting boids.")

(moment of silence as we remember N0BK, now in a better place)

> Oh yes. It's worth a look, even if just to see the young Terri Garr. I
> like it best out of all his movies.

So many great moments in "YF":

"Elevate me!"

"What knockers!"

"Oh you men. Six or seven quick ones and you're off with the boys..."

"What hump?"

"Frau Blucher!"

"You gave the monster part of your wonderful brain. But what did the
monster give you?"

(sung):"Oh sweet mystery of life, at last I've found you!"

and the one I've used many many times:

"Could be worse. Could be raining."

> to maybe get a used 706 at about 400 or 500 or so.

I didn't find the series of tests difficult at all. The 5WPM and 13WPM
were fairly easy too, as I had time to practice the 5WPM while on a
rainy camping trip. Good thing I brought plenty of batteries and a code
practice tapes.

13WPM was gotten by actually working HF with what privileges I had as a
Tech+. From there, up to 20WPM and all done.

I think the biggest detriment to testing now is the publication of the
question pools. People can get into the hobby via rote memorization,
which by the way is what schools teach kids, not how to think but how to
memorize.

So over time the hobby is just going to be awash in nitwits, and then
fade away. There are too many other options to communicate.

You, sir, have that only by virtue of being licensed by some
Administration other than the U.S. Federal Communications
Commission.

It is the latter's licensing policy that is under discussion here.

But you knew that all along, didn't you?

Don't tease the bears..... <ggg>

If you don't know why, then you are a part of the problem like he is.
Tell me why someone who has no respect for other amateurs, who interfers
with other amateur communications, issues phoney "felony complaint
affidavits" to harass other amateurs, threatens other amateurs because
they refuse to give up the frequency to him, willfully violates the FCC
rules, uses amateur radio for monitary gain (against the rules), engages
in broadcasting (against the FCC rules), should be on the air?

I think you just buy the site. I use Internet Connection; but DirectNIC is
dirt cheap.

Once you have the site, send me an Id/password and I will put together
something decent (but simple) for you. I won't spend as much time on it as
my employees did on my corporate sites, but I will make it at least as nice
as my home site.

I'd say it's still relevant. Lots of countries have now abolished the code
test, since the international requirement went away last July. What
problems have been reported as a result? None, of course. So that is proof
that it isn't necessary.

For sure! Baxter has not mellowed a bit. I remember when he got his kicks knocking the fine, friendly gentlemen who ran the Sunday morning Bermuda Net off their traditional frequency with his one-way high-powered blather. Then Baxter went and declared a national emergency for the country of Bermuda! What a nut. How long must we endure Baxter's abuse of amateur radio? AK

--------- Tony's letter to the Bermuda Government Telecom Officer --------

Antony Sxxxx, VP9--
Hamilton, Bermuda
August 21st. 1989

Mr. E. Pitman,

Governement Telecommunications Officer,
Department of Telecommunications,
Hamilton.

Dear Ted,

I am faxing a transcript of the broadcast put out by K1MAN last week.

When you have read this I would like to have a meeting with you, maybe we could have lunch and discuss it then, to fill you in on what actually happened.

Your support with this would be appreciated. I have been to the American Consulate and will be writing a formal letter of complaint this week, requesting a public apology from K1MAN. He is advocating that I should lose my license for NOT passing third party traffic when the "world needed to know" and he had declared an emergency. He was doing this under the authority of the "FCC" according to him. I reminded him that we were not a State of the United States of America and that we were governed by the Department of Telecommunications and also the British arrangements for third party traffic. He could declare whatever he wanted to but until we had clearance, we would not pass it

No emergency had been declared and as far as we were concerned it was an unofficial net standing by in case we were needed should an emergency be declared. He did not like being informed that we were handling the situation ourselves very efficiently, without his help.

Please telephone me when it is convenient and I will explain more, or as I said, maybe we could have lunch.

Yours sincerely,
Antony Sxxxx VP9--

This is a response to the editorial broadcast by K1MAN after Hurricane Dean.

STATEMENT -
KlMAN stated "IARN activated for Hurricane Dean as it neared Bermuda, Sunday August 6th. 1989 at 11.30 UTC. IARN Headquarters in Belgrade Lakes etc. received a call from Tony Sxxxxx, VP9--, requesting assistance from IARN on 14.275mHz. Tony wants to activate 14 . 275mHz. . .etc. "

FACT - At 11.15 UTC, VP9-- & VP9__ activated the Bermuda net.

A broadcast was in progress and VP9-- decided to telephone KlMAN.

The conversation was "Glen Baxter" and the response was "Tony Sxxxx VP9-- in Bermuda. We want 14.275mHz cleared due to the impending Hurricane"

Response from Glen Baxter, "No problem" and the telephone conversation finished.

FACT - At no time was a request made for IARN to assist or to activate.

FACT - KlMAN checked in to the Bermuda net at 11.45 UTC and he was informed, (as were many others who had checked in) of the current situation in Bermuda.

STATEMENT -
"Associated Press and therefore the entire world, was, de facto, cut off from the world of public information dissemination..... up to the minute detail report, now assured that ham radio and IARN had a well established and well maintained link to Bermuda"

FACT - Glen Baxter was not on a well maintained link to Bermuda. He checked in and was given information the same as many other hams. The so called emergency was K1MAN generated and not an emergency in Bermuda. The reports of lack of readiness at 20.00 UTC were absolute poppycock. All of this information had been issued by the Bermuda Hams between the hours of 11.15 UTC and 13.00 UTC that Bermuda had been well prepared.

STATEMENT
by Glen Baxter ".....festival the previous Thursday which included a soccer match between teams on either end of the Island."

FACT - Again, poppycock. K1MAN had been informed that the Cup Match was a cricket game between St. Georges and Somerset, had been played, the result was a draw and everyone had a good time. The match was on Thursday and Friday when the storm was hundreds of miles away. This Information had been given hours earlier.

FACT - IARU had generated an emergency, no one else. Totally uncalled for "here is the important news we gathered for Associated Press." IARN were more interested in promoting themselves and Glen Baxter in particular and when he found that he was not wanted on the net and did not have control of it he resorted to terminological inexactitudes to achieve his ends.

FACT - Glen Baxter relayed conversations he had with VP9-- to Associated Press without the consent or knowledge of VP9-- at the time. This is in contravention of International Law.

As an American citizen he has no right to assume Governmental authority and issue edicts to hams in other countries. At no time can he advocate publicly that licenses should be revoked and should he have any complaints then these should be directed through the Department of Telecommunications in Bermuda. His pontificating on people's attitudes and his declarations of emergencies allows him to promote himself and his organization in such a way that his approach does sound plausible. As they say you can fool some of the people some of the time but not all of the people all of the time and K1MAN does not fool any Bermuda Ham. His trip to Moscow paid for by the Young Communist League leaves one to suspect his motives and his reporting.

Lloyd,

Personally, I think K1MAN should be removed. Why? Because of the attitude "I am always right." and might makes right. It is such attitudes that brought us Tailgate, the Marine Corps mess (where medals were jammed into bare flesh, amongst other things) and the current situation where the mighty (who served, maybe, perhaps, uh .... well, he *did* receive at least one paycheck - I think) and their well monied supporters have caused us irreperable damage in the sight of the world with abominable treatment of prisoners.

Argue all you want; I won't. The world *will* pass judgement. The best thing is the removal of the current administration of this country and removal of K1MAN would do the amateur service a good boost in the right - uh, make that *proper* - direction.

If the FCC goes along with the ARRL proposal, which it looks like they will.
Then CW will be here for the Extra class for the next generation or so.
After that everyone will be dead and the grandkids will be liked to the
internet at birth with bio implants.

Again Alun you are not qualified to judge. Since you are only half a ham. You have no experience to enable you able to judge anything about CW. You need to just admit that before you have the whole USENET laughing at your ignorance on the subject.

Damn that was good Jim Hampton. I really liked the way you wound MAN in with alleged prisoner mis treatment in Iraq, and got it all, including MAN to be blamed on Bush.

You should go write for CNN. I hear they are sinking fast and need another writer from their political commentary (see political comedy) section.

Lloyd,

Regardless, he has *not* totally cleaned up his act. My best thought would be to eliminate any kind of "broadcasting". The ARRL wouldn't care for that, obviously, but there are going to be more folks that feel if one person (or organization) can, then they can. They *can* indeed, if they follow the rules. But those with the attitudes that bother me are always 'pushing' the envelope. Either they are given carte blanc, or others start the same thing. In any event, the willful interference bothers me a *lot*. This has been getting worse over time and if not nipped in the bud, amateur radio might just as well be called amateur cb. Sorry, just my opinion.

> only be 3 license classes, then why not keep the Technician license
> and upgrade the current Novices to Technician?

Because we need to bring back the eliminated entry-level license!

> If a new entry-level
> license is necessary, then what's wrong with having 4 license classes
> instead of 3?

Because it is UNNECESSARY... the General, Technician, and TechPlus
tests are/were virtually identical - ergo, MERGE 'EM ALL!

> What's wrong with compromising on #1 or #2?

Forget it... NO MORE COMPROMISING! It has been attempted over the
years, and all these foot-draggers want to do is pull us back to
December 6, 1941... 'aint gonna happen McGee... It is 2004, and we
have Cell Phones, the Internet, 125 Channels on TV, etc., etc., etc...
time for US Ham Radio to join the 21st century.

Morse Code will now officially be IRRELEVANT (at least as far as
Novice and General Classes are concerned). LIVE WITH IT.

The ARRL proposal is PERFECT... time to MOVE ON!

Lloyd,

It is already headed that way. Ummmm K1MAN? 14.313? 75 meters?

As far as a test, methinks that when an 8 year old can pass the extra, it is time to rethink exactly what we want. Certainly, it isn't, nor should it be, a test that might well be appropriate for a college student. That said, it appears headed towards a bonus question (worth 50 points). Spell your name and address properly, and they add 50 points. Starting with 50 points (assuming most folks can spell their name and address properly), most folks could randomly select answers and have a fair chance of passing. Of course, someone will complain that if they can't read and write, they should simply mark their 'X' and get the 50 points. Someone else can read the questions and they can guess - and still have a good chance of passing.

C'mon, Dan, I wasn't blaming MAN for the prisoner mistreatment. I was blaming "attitude", of which I believe MAN has a mindset not unlike some other folks - all of whom I do *not* trust at all.

Most of the folks in Washington (Democrats as well as Republicans) did *not* serve. I believe there are only two congresspersons who have sons or daughters serving - and those few serving are officers.

I find it interesting that it is fine to export our jobs to other countries, but *OMG* to allow seniors to buy prescription medicine from Canada is positivly unamerican and illegal. Money and power talks. Kind of a double standard, don't you think?

I don't like double standards, and I believe that K1MAN is setting himself up as a standard above everyone else. Note how the FCC mentions that *no* amateur has any more right to a given frequency than any other. Perhaps that escaped you. Go read the note from the FCC again.

This might bring up another interesting topic. The license classes. I'd like to see extra with full access; general with about half of that, and novice with about 1/4 of extra. Then, I'd limit novice to 200 watts, general to 1.5 KW and extra to 200 watts. Yep, and no more even in the other areas (i.e. extras would *still* be limited to 200 watts in the general or novice portions). Generals would have to reduce to 200 watts in the novice portions. At least half of the bands would be cleaner. Anyone could request a downgrade so they could run that "gallon", along with the reduced frequency access. Anyone caught using excess power would have their license revoked. No second chance and no reapplies for 10 years. Maybe things would clean up a bit. Wishful thinking LOL.

BTW, perhaps you should take a job writing for the Republican party. Maybe you could put a good spin on what has happened. Then again, I think the Catholic Church might need a good spin writer. Go check with them. I'm not into putting spins on anything; the world is going to judge us regardless of the spin-masters and your wishful thinking..

73 from Rochester, NY

Rules violations. Seems he has fixed all but 2 such problems. One that
needs to
be corrected is starting his transmissions on top of existing QSOs.
Even W1AW
has to QSY up or down several KHz to find an unused frequency. Hams who
wish to listen to K1MAN know how to tune a receiver to find him.

A more serious issue would be pecuniary interests he might be having in
his transmissions.

Wacky opinions are still protected by the 1st Amendment.

Has there been any trouble attribatable to a "non-code" ham fumbling
with code on the
bands? As long as he's not QRMing anyone, other hams will likely
"elmer" him so he
will become more proficinent. This would be a good use of the old
Novice subbands.
By gentlemens' agreements, designate s few frequencies as training
grounds for code
beginners. Not everyone can make it to a code class.

Ummm, they are maneuvering here. That "general compliance" means that they are doing an end run around the broadcasting issue and prepping to go after him on the other issues.

He ought to be a tad worried now. The broadcast issue was a sticking point, as there is a thin line between what he is doing and the ARRL reports. That sticking point has been negated.

Yeah, that was quite a jump there, Dan! I think Jim learned that tactic from the neocons. I hear Rush and Anne do it all the time. And remember they are still blaming everything on Billary! Might as well get used to it. The libs have learned.

Here is an interesting thing I found out last night:

My wife's boss is paying $5.65 an hour to provide health insurance for
one employee and his family. He's paying the total cost. The cost has
gone up three times since January.

Dan, you are not only a lid, you lack even the rudiments of logical reasoning. I was _not_ judging anything about CW. I don't even care to do so. What I was saying, since you evidently fail to understand, is that anyone who says that users of a particular mode are lids just because they use or prefer that mode is not a considerate person, i.e. you aren't.

There is a valid place for each mode that we use in the amateur service, and if anyone wants to do all of their operating using one mode, whether it be CW, or slow-scan, or PSK, or SSB, they should be left in peace and not maligned by the likes of you. IMO none of them should be labelled as 'half a ham'. What should we count you as? One quarter of a ham? One eighth?

Now you've added an additional element. We've gone from "easy" to "a lot of work" to "long time to do". Something "easy" wouldn't seem to require either a lot of work or a long time to do.

I have little sympathy for anyone who would claim that learning morse at a speed of five words per minute is a lot of work or that it requires a long time to learn.

But you should; it's so wonderfully stupid. And it is the statement
(of fact) that got this ball rolling. You back-pedalled and are now
soft pedalling a different statement, which was also shown to be
wrong.

> >So, if you want vindicated for making such a wonderfully stupid
> >statement, you can look in the Army, Air Force, and Navy regulations,

No, it is not sufficient. Quote A Military Regulation or Title 47
document.

> >No, I don't expect Hans to be named in any regulation. That's not
> >what I'm after. Forcus on the part where you said, "MARS >>IS<<
> >"Amateur Radio."
>
> No Amateur Radio = No MARS.

Nope, not sufficient.

Why do you keep running away from your statement,

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

> >That is all. And since you're probably a radio volunteer for all
> >three services, and an amateur radio operator, you should be able to
> >vindicate yourself in short time.

> AAT4SA/T....Didn't stay long...Decided it wasn't feasable to

I knew you were qualified to research the DoD and Title 47 regs to
back up your statement, " Sorry Hans, MARS >>IS<< "Amateur Radio".
"

The only question now is when you'll post the applicable citation.

> >Best of luck in making me eat crow. Hope you enjoy yours.
>
> >>>I<<< don't have to "make" you do anything, Brain. >>>YOU<<<
> continually make assertions you can't/won't substantiate, make assertions of

Document this:

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

> I ahve no crow to eat here or anywhere, Brain.
>
> Stop lying in public. Stop making assertions you can't/won't substantiate.
> Be a man.
>

> Steve, K4YZ

I am a man.

Now you be a man and post any DoD or Title 47 citation whatsoever that substantially says,

" Sorry Hans, MARS >>IS<< "Amateur Radio", "

without the "Sorry Hans" part, of course.

"Caw, caw!"

Steve, I hear your crow calling. You might want to locate some Tobasco sauce.

I had no particular interest in the topics covered by probably half
the courses I had to pass to get a degree. But I did pass 'em
(grousing all the way) and the priveleges flowed. The philosophy
behind volume of work invested in learning = volume of privs goes back
at least to the guilds of the early Renaissance.

What's your point? Ham radio license tests should be reduced to passing a test on mouse operations in order for ham radio to compete with the Internet? Passing a one-button mouse test garners a Tech ticket, two gets a General and two plus a scroller wheel gets the examinee an Extra?

Amateur Radio Newsline™ Report 1395 May 7, 2004

Amateur Radio Newsline report number 1395 with a release date of Friday, May 7, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC denies a request for more time to respond on BPL, the NTIA report on BPL explained and ham radio will honor the military. Find out the details on Amateur Radio Newsline report number 1395 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: FCC REFUSES TO EXTEND COMMENT CUTOFF ON BPL

The FCC has issued a ruling denying a request from the ARRL to extend the Commentary cutoff date on the introduction of BPL as outlined in ET Docket 04-37.

The ARRL had asked the Commission to extend the deadline for Comments and Reply Comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. The League had argued that this would give it and others the time required for the National Telecommunications and Information Administration to conclude its study at BPL, issue an initial report and give commenters time to evaluate it.

In its April 30th release denying the request the FCC gave no overriding reason for turning it down. Instead the agency said that the now past May 3rd commentary cutoff date stands. It added that those wanting to address the issues raised in the NTIA report can do so during the Reply Comment period. That's open now and ends on June 1st. (ARNewsline(tm))

**

THE BPL FIGHT: NTIA RELEASES LONG AWAITED REPORT ON BPL

Meantime, as reported last week, the National Telecommunications and Information Administration has issued its long-awaited report on the interference potential of BPL. Amateur Radio Newsline's Mark Abramwicz, NT3V, is here with an in-depth look at the report and the affect it might of on the introduction of BPL technology:

--

The very title: "NTIA Report Lays Groundwork for Responsible Deployment of Broadband Over Power Lines" doesn't sound encouraging.

But like any package - or the glowing press release that accompanied it - the more than 100-page document contains so much more once you open it.

And, you don't have to go beyond the executive summary that accompanies the report to find the glowing praise by Acting NTIA Administrator Michael Gallagher in the press release is quickly muted. Muted by the facts and some disturbing interference problems the agency's own technical review identified.

CQ Magazine Editor Rich Moseson, W2VU, digested and analyzed the NTIA report and agreed to share his findings with the Amateur Radio Newsline audience.

"It is one of the first really objective looks at the real danger of interference caused by BPL," Moseson says. "As of objective as studies by the ARRL might be, they would be perceived as someone with a certain interest here.

"The NTIA is a federal agency and their engineering study should carry a lot of weight with the FCC."

Moseson says he identified five major conclusions. First, among them, that the methods currently used to measure noise levels and interference potential are not adequate, according to the NTIA. Essentially, he says, there's an underestimation of peak-field strength. And, peak field strength is the leading contributor to high-interference risks.

"As applied in current practice to BPL systems, Part 15 measurement guidelines do not address unique physical and electromagnetic characteristics of BPL-radiated emissions," Moseson says. "That's a quote. That's pretty significant that the Part 15 guidelines do not address the unique physical and electromagnetic characteristics of BPL emissions. So the measurement system being used is not right."

Second, he says the NTIA engineers said noise levels must be measured from power lines carrying BPL as well as the device that couples the signal to the power lines.

"What the NTIA is saying here is that you can be 100 feet down the street from the actual coupling device or up to 300 feet down the street and if the signal bumps into one of these corroded connecters or something, then, it's going to start radiating there," Moseson says. "And you have to measure all along the line as well as at the coupling device."

Third, Moseson says NTIA found interference to weak- or medium-strength signals is likely to affect aircraft operation and the navigational frequencies used by aircraft.

"Interference to aircraft reception of moderate to strong radio signals is likely to occur below 6 kilometers altitude - that's 20,000 feet - within 12 kilometer center of the BPL deployment," says

Moseson, quoting from the report. "Interference would likely occur to aircraft reception of weak to moderate signals within 40 miles of the center of the BPL deployment area."

NTIA's fourth major conclusion, according to Moseson, is that results of BPL tests and implementation in other countries has met with mixed results. And, in some cases, it has been shut down entirely. He cites an example:

"During an emergency exercise of the Austrian Red Cross in May 2003, communication was massively disturbed - that's their words - by BPL with interference levels exceeding the limits by a factor of 10,000," Moseson says.

The fifth NTIA conclusion identified by Moseson is the agency's desire to conduct more testing.

"They proposed some more stringent measurement standards and procedures along with some of the interference mitigation techniques that were mentioned in the FCC's Proposed Rulemaking and others that weren't," Moseson says. "But they're saying here that they're not even sure that those are going to work. They want to do more testing on them and report on it later in the year."

The bottom line: Will the FCC's commissioner take seriously the findings and red flags raised by the NTIA report?

"In this case, I'm not really sure because they seem to have made up their minds going into this as to what they were planning to do," Moseson says. "So, I am not as optimistic as I might be in other rulemaking proceedings."

So, how soon could the FCC act? Moseson says he wouldn't even begin to speculate.

"At this point the comment period is closed. Comments closed on May 3," Moseson says. "There's a two-week reply comment period. And, then it's up to the commission of what they're going to do and when they're going to do it.

"There is no requirement that the FCC issue a ruling in a given amount of time after the close of comments on a proceeding. So, they very well could wait until the NTIA issues its second report. And, I'm sure that it would be accepted into the record as coming from another federal agency."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The full report may be downloaded, either in full or chapter by chapter, from the NTIA website. Its in cyberspace at www.ntia.doc.gov/new.html (ARNewsline(tm))

RADIO LAW: LEGALIZING AMBER ALERTS ON THE HAM BANDS

Hams worried that they might get into trouble if they relay lost child or AMBER alerts on the air may soon have regulatory relief. This as wording in an omnibus 71-page, Notice of Proposed Rulemaking on a variety of ham radio issues issued in mid-April tackles the problem had on.

One of the proposals in the April 15th NPRM proposes to and we quote: "clarify that amateur stations may at all times and on all channels … make transmissions … which may be instrumental in saving human life and property." In other words, if enacted as proposed, retransmitting AMBER Alerts and just about any other type of live saving communications would become legal under Federal law.

The proposal is part of FCC WT Docket 04-140. The Comment deadline is June 15th. (CQ)

RESCUE RADIO: YOUNG HAM TRIES TO GET AID FOR DROWNING VICTIM

A tragic story from the Great Smoky Mountains National Park near Townsend, Tennessee. That's where a youngster on a field trip drowned at Cades Cove while a classmate with a hand held 2 meter transceiver tried to get help to save him. Bill Pasternak, WA6ITF, reports:

--

It started about an hour after the group arrived at the campsite on Friday, April 30th. According to news reports, a group of people including the ill fated teen took to the water. In a short time, the victum, identified only as Chris found himself in trouble. Others tried to save him while teachers using cell phones tried to call for help.

When it was found that there was no cell phone coverage, another student, Jordan Webb, KI4AVG, said he would try ham radio. Jordan had brought along his two meter hand held radio. He found a near-by high location and called for help over the Knoxville area WB4GBI repeater. He was answered by Jim Bond, K6SPY, who notified Park Rangers. Unfortunately they didn't arrive in time to save the victum, but because KI4AVG had the foresight to bring along his 2

meter talkie, his classmate's body was recovered within hours, instead of days.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, reporting.

--

Jordan Webb, KI4AVG is only thirteen year old and attends the Vine Middle School in Knoxville. He has been a ham for just about a year and serves as net control for the weekly Young Amateur Radio Net on the Radio Amateur Club of Knoxville W4BBB repeater. (K4PZT, KG4UJC, KG4YTT, WBIR.com)

**

ENFORCEMENT: NET INTERFERENCE FOUND

Authorities in the United Kingdom were quick to act when a propagation net became the target of a jammer. We have more in this report:

--

Listeners to the DK0WCY Solar Geomagnetic Information broadcast on 75 meters recently experienced interference from an unmodulated carrier on the channel. The interference, which appeared to be deliberate jamming, was reported by the DK0WCY team to the authorities in Germany who founf that the interference was coming from from the United Kingdom.

With support from the Radio Society of Great Britain's Amateur Radio Observation Service and other U-K hams, authorities traced the interference to an amateur station in the Chepstow area. The interference ceased abruptly at 0608UTC on the 25th of March. No explanation was given but it is assumed that government regulators took the station off the air.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

No word on who the jammer was or what punitive action will be taken by U-K telecommunications authorities. (GB2RS)

**

ENFORCEMENT: YOU BETTER STAY OFF THE RADIO

Back here in the U-S-A, the FCC says that a former ham who has been to jail for operating without a license is back on the air and still has no FCC authorization to be there. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "Richard A. Burton of Harbor City, California, has been sent a Warning Notice of unlicensed radio operation on 2 meters in the Los Angeles area. Mr. Burton has been convicted in 1984, 1990, 1993 and 2000 of unlicensed radio operation under Section 301 of the Communications Act of 1934, as ammernded, and has served time."

--

According to Duckworth, the Notice sent to Burton states that additional instances will lead to -- and we quote -- to the same result. The FCC has also designated for hearing a second General Mobile Radio Service application that Burton had filed with the agency. (FCC, RAIN)

**

ENFORCEMENT: CRANK CALL TO CUBA'S CASTRO LEADS TO $4000 FINE

The FCC says that a Florida radio station should be fined $4000. This, for permitting the hosts of the Morning High Jinks show placed a crank-called to Cuban President Fidel Castro and broadcast the recording.

As previously reported, Joe Ferrero and Enrique Santos of WXJD FM used snippets of an earlier prank call involving Venezuelan President Hugo Chavez get past a Castro receptionist and up the chain of command in a five-minute broadcast June 17th of last year. They then fed pleasantries to Castro before breaking in and calling him an assassin.

On April 28th the FCC concluded that the station should be forced to pay a fine for the broadcast. The agency rejected claims that a rule requiring people to be notified before their voices are used on the air does not apply to people in Cuba.

WXJD was given the usual 30 days to pay the fine or to file a further appeal. (Published reports)

**

RADIO RECORDS: XL TO UA ON 137 KHZ

Hams in New Zealand and Asiatic Russia have claimed a new world low-frequency distance record. ZM2E at Quartz Hill near Wellington and UA0LE near Vladivostok say that they completed a two-way contact the night of the 20th of March on 137.70kHz. The path length is estimated to be 10,311 kilometers or 6392 miles. (Q-News, GB2RS)

**

AWARDS: YCCC OFFERS SUBSIDY AWARD PROGRAM

The 400 member Yankee Clipper Contest Club has announced that it's First Annual DXpedition Award Program has been funded for the 2004 through 2005 contesting season. The purpose of the program is to encourage new as well as young amateurs to participate in

contesting.

As part of the award program, the Yankee Clipper group will award the winning applicant up to $1,500 to accompany a YCCC authorized Dxpedition and / or Contesting operation any where in the world for up to one week, to operate in one of the four major contests.

This a first time program for the club. The winner will be chosen and announced at the Boxboro Hamfest in August and there are some restrictions on who can apply. More information is on line at www.yccc.org or by e-mail to W1LLU@verizon.net (W1LLU)

**

THE SOCIAL CIRCUIT: MARC HAMFEST AND COMPUTER FAIR

Turning to the ham radio social scene, the Mid-Atlantic Amateur Radio Club will be presenting their annual Valley Forge Hamfest and Computer Fair, Sunday, July 11th. The venue is the Kimberton Pennsylvania Fire Company Fairgrounds on Route 113. Admission is $6.00 for hams. Unlicensed spouse and children of licensed amateur radio operator will be admitted free of charge. For additional hamfest information, please e-mail MARC at Hamfest-info@marc-radio.org. Information is also available on the club website at www.marc-radio.org. (Via e-mail)

**

HAMVENTION 2004: THE ARRL PUBLIC RELATIONS FORUM

The ARRL sponsored Public Relations Forum at the 2004 Dayton Hamvention will be held at 8:30 A-M on Sunday morning, May 16th. The venue is Meeting Room 1 at the Hara Arena and those planning it say that this will be a do not miss event for anyone interested in promoting the hobby.

What will be discussed you ask? Well the major items include public service, spectrum protection and of coarse Broadbnd Over Powerline internet access. The session will also explain how to tell the world outside the hobby about Amateur Radio and how to address our concerns to public officials and local media.

Again, that's Sunday, May 16th at 8:30 in the morning for the ARRL Public Relations Fourm at Hamvention 2004. We will see you there. (Dayton Hamvention(r))

**

HAMVENTION 2004: A NICE PLACE TO LAND

And if you are a private pilot planning to fly your own plane to next weeks Dayton Hamvention, the events planners have a tip for you. Consider landing and tie-down at Greene County Airport in the near-by town of Xenia.

That field is located just south of Route 35 approximately 7 miles east of Dayton and is the closest airport to downtown. Its also among the easiest to get in and out of using small aircraft. Fuel prices are reportedly some of the lowest in the area, and the facility is well kept and capable of handling quite a bit of traffic.

Green County is just one of many airports catering to pilots of small aircraft in the Dayton area. More information about it is on-line at www.gwaohio.co. (Dayton Hamvention(r))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

WITH NEWSLINE: MORE THANK-YOU'S FROM N6TCQ

Ladies and gentlemen, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

Still playing "catch-up" for our supporters, in the month of July last year
we heard from:

The Raleigh, NC Amateur Radio Society, The Ohio-Kentucky-Indiana Amateur Radio Society, The Garland, TX ARC, Monthly contributor William Walters, WA2IBM, of San Jose, CA; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and Brad Berryhill, WA6JJB of Anaheim Hills

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at
www.arnewsline.org. That address will be repeated at the end of the newscast. I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: SPAM LOWERING LEGIT E-MAIL

Meantime, a recent survey finds that Americans are e-mailing less and trusting e-mail less because of the growing flood of junk messages. According to the Pew Internet and American Life Project, 29% of e-mail users have reduced their overall use of the medium while 63% of e-mail users say they are less trusting of e-mail overall because of spam. That's up from 52 percent in June of 2002. (Technology OnLibe)

**

HAM RADIO IN SPACE: SCIENTIST TO BE NEXT SPACE TOURIST

The next space tourist plans to spend his time on-orbit studying environmental issues. Gregory Olsen, the founder of Sensors Unlimited Inc. in Princeton, New Jersey says that he plans to bring along infrared sensors, which detect varying levels of heat, to analyze pollution in the Earth's atmosphere and the health of agricultural systems on the ground.

Olsen told a recent news conference that he hopes to inspire young people with his mission, and want to arrange a video teleconference with Trenton High School in New Jersey and a school at the Crow Indian Reservation in Montana.

The 58-year-old Olsen has hired Space Adventures to get him to the I-S-S. This is the same company that brokered the first space tourist trip of millionaire Dennis Tito's flight aboard a Russian spacecraft in 2001. Olson's eight-day voyage to Earth orbit is currently scheduled for April of 2005. As with all past space station visitors, Olson is expected to be trained in Amateur Radio and operation of the ham gear aboard the I-S-S as well. (Published reports)

**

WORLDBEAT: NEW RADIO RULES IN KENYA

Visiting hams now have a way to get on the air from Kenya. Ted Alleyne, 5Z4NU, the Chairman and Secretary of the Amateur Radio Society of Kenya sdays that that the Communications Commission of Kenya announced on April a new and more relaxed policy towards amateur radio licensing.

Until now it was "practically impossible" for most visitors to obtain an amateur radio license in Kenya. The previous stumbling blocks for reciprocal agreements, Security and Police vetting, have been dropped entirely. However, applicants' countries must have diplomatic relations with Kenya and 5Z4NU says that the ARSK will be happy to supply the new license application forms. (GB2RS)

**

WORLDBEAT - GERMANY: PROPAGATION STUDIES WEBSITE UPDATED

Volker Grassmann, DF5AI, says over the VHF Reflector that he recently updated his "Amateur Radio Propagation Studies" web site. Features now include a countdown for the 2004 sporadic E season, a discussion

of thunderstorm effects on the ionosphere, notes on the people behind VHF dxing and much, much more. The page is in cyberspace at www.df5ai.net. Volker says come over and spend some time at the site. (VHF Reflector)

**

DX

In D-X, word that GB5JCT is on the air from the fishing trawler Jacinta moored in Fleetwood dock in the UK. The trawler is now a museum dedicated to the fishing fleet that used to be based at Fleetwood. Over the Easter weekend the station was heard on 40 metros SSB and locally on 2 meter FM. (GB2RS)

Also, G3TMA, G3KHZ and IZ1CRR will activate a couple of Borneo's Islands on the Air during the next couple of weeks. If you work them QSL via G3KHZ. (GB2RS)

Lastly, GW3UOF will be active portable SV8 from Kavos, Corfu, in the Greek Isles through May 17th. Look for him on CW, SSB and various digital modes. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HONORING THE MILITARY

And finally this week, ham radio will be honoring those serving in the military. Jim Meachen, ZL2BHF, is here with the details:

--

Amateur Radio Military Appreciation Day will be held world-wide on Saturday, May 29th from approximately 10 a.m. to 7 p.m. Central U-S time. According to Emery McClendon, KB9IBW, this will be a day-long operation to talk to troops, and associated groups around the globe in appreciation of their service and personal sacrifice.

The main operating location will be from Johnny Appleseed Park and Wizards Memorial Stadium in Ft. Wayne, Indiana, using Emery's KB9IBW call sign. That station will be on from about 4 p.m. Central Daylight Time through the end of the Wizards game.

Planners say that they know of at least 25 military bases and club stations that will be operating the event. This includes stations in Iraq, Kuwait, and bases around the globe. More information on this event is in cyberspace at www.fortwaneradioclub.org

--

Again, the website for more information on Military Appreciation Day is www.fortwaneradioclub.org. (KB9IBW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, this word for listeners who use our 661-296-2407 phone line to get the newscast. That line will be down for about a week or so starting on Friday, May 14th as the phone machine that feeds the newscast undergoes repairs. We should have it back on-line by May 21st if not before. In the meantime, please use any of the other lines you find listed on our website.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, see you all at the 2004 Dayton Hamvention and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Yep.

> Without a SINGLE
> exception, the average scores on phone weekends are significantly higher
> than on the CW weekends, no exceptions.

Did you mean winning scores, Hans? Or did you actually add up all the
scores submitted each year and work out the average? "Average scores"
can mean a lot of different things.

> The reason is that the exchange
> is faster on phone than on CW.

For a sizable percentage of the participants, that's certainly a
factor. And I'm sure most of them don't repeat back the entire SS
exchange - unlike what I hear so often on Field Day.

There is also the factor that there may be more participants during
the 'phone weekend. Also fewer QRP entries on phone?

A really fun contest regardless of mode. Someday I'll do a sweep...

> The ITU requirement for a code test was dropped on July 5th, 2003, so
> evidently a majority around the world agree with you.

A majority of the world's governments that bothered to attend and vote
on the issue.

And all they did was change the rules so each country can decide for
itself what is required - just like the written test.

Although a suggested standard for written tests was added at the same
WRC, it's really more of a suggestion than anything else. Countries
can have wide-ranging interpretations of what's "needed". For example,
do you think ol' JY1 and his family had to sit for written and code
exams that were equivalent to what US or UK hams had to pass for the
same privileges? Or do you think the US writtens compare with, say,
those in the UK?

If I'm not mistaken, getting a license in some countries *requires*
successful completion of an approved training course. (I know the
"Foundation" license has this requirement). Doesn't matter if someone
is a Ph.D. in EE, they have to attend and pass the ham radio classes
to get the license - even though such courses are not part of any
treaty and not required in many other countries.

Imagine the reaction here in the USA if the code test were dropped *and* getting a license required attendance at an approved ham radio training course. Not a "one day wonder" course such as was recently the subject of an article on the ARRL website ("Is Your License Class Efficient" or some such title), but rather a multisession course with quizzes and a final test that were not from a published pool.

Point is, just because it's not in the treaty anymore doesn't mean all countries will or should drop it.

> I think the FCC will
> drop it, but they move at a snail's pace.

They're busy with other things. And perhaps they don't see what all the fuss is about. After all, we're talking about a 5 wpm code test that can be passed in a number of ways, with all sorts of adaptations and accomodations (tone, volume, headphones, typewriter, flashing light, Farnsworth, etc.) Add to this the fact that today there are training aids undreamed of in the past - most of them free or quite inexpensive.

> I didn't think it would survive
> for as long as a year after it was no longer needed, but it's only nine
> months so far, so I could still be right.

I think you meant 'no longer required by treaty'. Whether something is needed as a license requirement is purely a matter of opinion.

It's been ten months and two days since WRC-2003 ended, and given FCC's method of handling the issue it may well be another ten months before we even get to the NPRM stage.

Most of all, note that the 2000 restructuring did not result in lots of new hams, even though the requirements for all classes of license were lowered and the whole structure simplified.

I should have know so Barry. My problem is when I knew the Aussies they
were real men. You know....had a set of them. Good ole boys, could

outdrink the Queen anyday. Were men of there word. Took the ears and passed them around at mess for all to see.

What ever happened to the real Aussies?

I don't know where its from but I am hearing a lot more phone activity in
the CW bands of late. And not speaking Spanish. English. But who knows.

As for the use of the Novice sub bands. You really should keep more up to
date. The FCC has a proposal out right now to delete them and extend the
phone bands. And guess what? I agree with it.

Dan/W4NTI

Real hams do it with continous wave.

A real ham is the proper answer.

You know one that paid his dues, passed his tests in front of the FCC. Demonstrated his abilty to not only receive....but to SEND CW in front of the FCC examiners. And has 43 years of experience since then. You know....a real ham.

Make of that what you must.

> Novice and General Classes are concerned). LIVE WITH IT.
>
> The ARRL proposal is PERFECT... time to MOVE ON!

I wouldn't know why morse shouldn't be eliminated for Extra also, it it is eliminated for the General class.

And no, the ARRL proposal isn't anywhere near perfect.

The Morse code requirement for Extra is just a bone thrown to the people that still want Element 1 testing. If we are going to get rid of element one, get rid of it for cryin' out loud. Why subject it to a lingering decline?

Over half of the Generals will then have been tested at the Technician level. Despite what you say, the tests are quite different. I've taken them all, and in my experience and opinion, they are appropriate for the privileges granted.

The administrative quagmire of Novice and Advanced class licensees that is stated as the reason for further untested upgrading simply doesn't exist.

Not a terribly perfect plan at all.

Age has nothing to do with Dan's personality problems. I've been
licensed for 50 years, took all my exams except for the first one
(Novice) in front of FCC examiners, but I've moved on since then.

Some people sit back and try to live in the past (military days,
ham radio license -- whatever) while others continue to anticipate
the future. Dan's "real ham" mantra is a plea for respect which
arises out of his own insecurity.

I've been there, done that, got the ARRL 35 wpm certificate, and
then proceeded to persue other things. It is my belief that ham
radio has become quite "uncool" to newbies in these days of
the internet, personal computers, Wi-Fi, and the rest of the
technology that attracts today's bright kids. I put ham radio on
the back burner way back in 1980 when my interests also turned to
computers and the Arpanet. I've built my own machines, written
operating systems for them, and developed software in persuit of
my technical interests. I think that the "real hams" of the 80's
did very similar things and enlarged their own worlds beyond the
narrow view that the SPST switch throwers (CW dudes) seem to espouse
as "real" ham radio.

As the other "real hams" left the Dan types behind, they became
insecure and increasingly strident. Ignore them. They not only
don't matter any more, they are not "real hams" themselves. They
are now merely old timers who couldn't keep up.

3694. Permanent Residents who want to become hams

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-07 22:00:36 UTC
From: Dan Jacobson <jidanni@jidanni.org>
Message-ID: <87k6znganv.fsf@jidanni.org>
Source record: 91759

There is much information available about licencing for hams who take temporary trips aboard. But what about people who are Permanent Residents and want to become a ham? Do most countries allow Permanent Residents to obtain an operator's licence? a station licence? all without needing to return or have any paperwork from one's country of origin?

I'm not talking about Reciprocal Licensing, I believe. I'm taking about citizens of country A who have long ago moved to country B where they are now Permanent Residents, when one day the ham bug bites and they want to get into ham radio for the first time. They may live very far from country A and don't want to go there anymore.

How far does the average country B allow them to get as far as licencing as compared to citizens of country B?

That would be an anachronism. It can't be done for real anymore, but
you're welcome to petition the SCA to start a chapter where you can
play at it.

One day QST will run that article in their April issue.

Yep, I hear them on top of the DX. They might want to interrupt their
continuous waves and add some intelligence to their transmissions.

Your sympathy was not solicited, and it or the lack of it doesn't
change the fact that for many, learning code at 5wpm is difficult and
takes a long time to learn. The real pity are all of the 20WPM
Code-Tape Extras that have never used code.

Amateur radio is no longer the cutting edge. I am very happy about
that, because most of the time I don't have to worry about poseur
ham-wannabe people. The vast majority of the amateurs with whom I
interact are grownup, mature, and interested in playing with and
learning about radio and other related technologies. I am very happy
about that, too.

Anon> As the other "real hams" left the Dan types behind, they became
Anon> insecure and increasingly strident. Ignore them. They not only
Anon> don't matter any more, they are not "real hams" themselves.
Anon> They are now merely old timers who couldn't keep up.

It is a shame that the wealth of experience and knowledge bottled up
inside is going to waste. Ah well. Such is life.

Jack.

I don't know about other countries, but the US has no citizenship requirement to obtain a US amateur radio operator or station license. All you need is to pass the examination and to have a US mailing address. You need never have ever stepped foot on US soil, if you can somehow gain access to a US mailing address. As only ONE EXAMPLE there was (is?) a flourishing VE group in Japan which was giving tests in Japan, and the applicants would use mailing addresses in the US (or US territories) to obtain their trophy US license, and in the process grabbing up choice US call signs, which then become unavailable to US citizens.

As an exercise for a rainy Saturday afternoon, peruse the FCC data for AH0/KH0/NH0/WH0xx and AH2/KH2/NH2/WH2xx calls and note the clusters of calls which share a common address and a penchant for Japanese names (the citizens of the Marianas have predominately hispanic surnames).

>> I am not.
>
>But you should; it's so wonderfully stupid. And it is the statement
>(of fact) that got this ball rolling. You back-pedalled and are now
>soft pedalling a different statement, which was also shown to be
>wrong.

When it comes to "so wonderfully stupid" you DO seem to have a propensity
to get in knee deep.

You've done it again.

I am not "back-peddling" on anything. No Amateur Radio = No MARS. You
have yet to disprove this.

Otherwise, you just keep trying to dazzle us with your brilliance only to
realize it the glare off the baldness of your ignorance.

Your problem, not mine.

>> >So, if you want vindicated for making such a wonderfully stupid
>> >statement, you can look in the Army, Air Force, and Navy regulations,
>> >as well as Part 97, Title 47, and give me -any- citation whatsoever

>> >is substantially true.
>>
>> No Amateur Radio = No MARS.
>>
>> That is sufficient.

>
>No, it is not sufficient. Quote A Military Regulation or Title 47
>document.

Yes, it IS sufficient. Each MARS program is wholly dependent on the
Amateur Radio Service to exist. It seems that everyone except you is aware of
this.

Again, ANOTHER one of your problems.

Maybe I ought to copy all this stuff and send it to Mrs. Beeper. Perhaps
she can explain it to you. Perhaps she can also explain to US why you have a
history of pathological lying and an inate ability to get yourself into corners
with your mouth that your bravado can't bull you out of...

>> >No, I don't expect Hans to be named in any regulation. That's not
>> >what I'm after. Forcus on the part where you said, "MARS >>IS<<

>Poor demented Steve.
>
>I told you that the zero in my callsign stood for the tenth district,
>not the zeroeth district.

I understand that for Amateur Radio applications the ZERO in the callsign is for the tenth call district. Unlike you, I can think in the abstract.

I also understand there is only one numeral in your callsign. It >>IS<< a ZERO.

So are you.

It really is THAT simple.

>And so you call me a liar and an idiot, and insinuate that I'm not a
>man.

You are a liar. You've made assertions about things you've allegedly done in Amateur Radio that you subsequently refuse to substantiate them with ANY form of proof.

You're an idiot because you keep exposing yourself to such ridicule even though you've been caught doing it over and over.

I doubt you're much of a man because of your foolish regard for your own reputation and reckless behaviour in a public forum

>Get help.

For what? Making a fool out of you? That's what I HAVE you for, PuppetBoy! Now...Tell us all about your hero Lennie...How proud you are to be associated with him...How you worked "portable" from Somalia without proper authorization to do so. Then you can ALSO provide us with SOME sort of proof to substantiate YOUR claim that "unlicensed radio services play a major role in disaster communications....

We'll wait right here while you pony up an excuse for all of that....And THEN tell us who's "nuts"...

Steve, K4YZ

There's a "PT2" that's been living in Atlanta for at least 20 years who continues to use his Brazilian call "portable 4". One wonder's who is getting paid off on this one.

Why not? I don't see any contradiction. For example, bricklaying is easy,
but how long would it take you to build the Great Wall of China? In any
case, I only said relatively easy, by which I meant it is below the speed
at which you can no longer copy individual dits and dahs, which was a
barrier to a lot of people..

That would be me. Not just tapes, in fact I didn't find tapes to be a good
method of learning, but I've never attached a key to a rig. What was the
point of me learning 20wpm?

Actually, they only have to do the practical assesments, it's not necessary
to attend the course.

I think abolishing the code test will remove a block in the system, but
won't have much effect unless we actively do something to recruit new hams.
I don't really see much of that happening right now.

Don't forget that the CW subbands extend much further in the US than
anywhere else. Those you are hearing are almost certainly in their phone
subbands.

Nope.

You can refer to almost any current career college degree program and
still find curricula loaded with irrelevant and inconsequential "fluff"
courses, no doubt "mandated" for the purpose of keeping the paying student
paying.

>> What's your point?
>
>My point is that we need to recruit people into the hobby.

If one reflects back on the history and demograpics of the Amateur Radio
Service, there have been those who obtained licensure for a myriad of reasons,
but those who really get in it and stick with it have recurring central
interests...Two types come to mind. First are those who are facinated by radio
for radio's sake...Gadgets.

The other are those who see Amateur Radio as a further means to an
end...public service, emergency services, etc.

Then there are always those "others", ie: husband-wife licensee's who just
want a cheap honey-do connection and nothing else.

Most of the "active" folks are the gadget operators and ES types, so let's
go to where they are rather than wait for them to find us..."Popular Science"
and "Popular Mechanics" magazine..."Journal of Emergency Medical Services",
"Emergency Medical Services", etc etc etc.

I never understood why we put the number of "basic" licensing course ads we do in Amateur Radio magazines...Most folks who read them are ALREADY licensed!

>atall. I just think we need to abolish the code test.

Code test-schmode test...If you want to re-establish some validity of the Amateur Radio Service's credibility as a breeding ground for technically competent licensees, close the written test pools.

That will never happen, however, for one very prominent reason if no other...Truth be known that MOST people would never get an Amateur license because of the WRITTEN test...In it's raw form, it requires that the applicant actually KNOW something. That requires REAL learning, not just rote memorization, which is exactly what learning Morse Code is, and is exactly what the written tests are now.

Element 1 only adds access to about 2.5% of all Amateur allocations. Those that really wanted HF priviledges only saw the Code test as a hurdle...Not a brick wall.

So long as he doesn't become a US citizen or get a US licence, and so long as he keeps his Brazilian licence renewed, he can operate in the US indefinitely. However, he should be signing "W4 portable PT2___". Only Canadians are now supposed to add the US prefix on the end. "PT2___ portable W4" would have been right 20 years ago, but things change.

20 years ago he would have needed to apply to the FCC for a new 610A every year, but now he doesn't need anything from the FCC to do it. Also, if he really doesn't use a W in front of the 4 he would be saying he was in the 4th distrct of Brasil, so that would always have been totally incorrect, 20 years ago and now.

It used to be common to require citizenship as a condition of getting a licence other than a reciprocal licence, but most countries dropped that many years ago. There may still be some places left on the planet where it is still the case, so it's always a good idea to check.

So let me rephrase that. Why should I have had to pass 1C to get the bottom ends of the phone subbands? Actually, that's where the DX used to be, but it seems to have moved up to avoid the 'hernia nets' that now seem to occupy that spectrum.

It appears as though he's been clipped.

He now has a US call...And with privileges that are less than his
Brazilian license. If he were not required to change, why would he?

Because at the time that was what was required to pass the level of
licensure you sought.

Obviously you WANTED that level of licensure because you did what you had
to do and got over it. The benefits outweighed the effort to obtain them.

How many people "want" to be doctors, airline pilots, bankers, etc, but
never get there because of the amount of education or training it takes to get
there?

Yes, some are hindered by financial or other "real world" hurdles, but
then too there are hundreds of stories of people who worked two-three
jobs...weathered divorces...single parenthood...etc and overcame those hurdles
to get what they wanted.

It's all a matter of what you want as opposed to what you're willing to do
to get it.

As for the "hernia nets", they aren't a factor for me...I don't find folks
who are predisposed to discussing thier gastrointestinal dysfunctions below the
phone subbands.

Ditto! And altho I can "work" somone in Australia on the pooter, I liken
it to fishing with hand grenades!...

It takes skill to drop that line in and coax "the big one" onto the hook!

I am the same way with aircraft. I used to live at the junction of two
low-level military training routes in Sequatchie County, Tennessee, and was
routinely treated to impromptu "airshows" courtesy of the United States Air
Force, Navy and Marine Corps. I could hear the "whistling" of the engines
coming up the valley and would run out to catch a glimpse.

When the U.S. was gearing up for Kosovo, B-1B Lancers and F15 Eagles were
regulars along the route.

I agree, but what price would we pay if we lost Amateur Radio altogether
due to low census? With the dollar-figures the ARRL posts every year they can
afford to put at least one full page ad in those mags per quarter, at least!

The French have been waitng for some time for a government minister to sign the rule change abolishing their code test. It was signed on the 4th, and will take effect when published in the official journal, probably either on the 14th or 21st of May, 2004.

Signed on May 4th by P. DEVEDJIAN the
Minister of Industry. Mr DEVEDJIAN has
informed the REF-UNION (IARU) that he
allows class 2 operators (technicians)
on HF bands without requiring a CW exam.
Publication of the text to the Journal
Officiel is expected in the next few
days.

Fuck CW !

Excellent point, Alun. Every once in a while, I have to remind the folks that *do* find it easy that their experience is not everyone's. It took me 6 months of every day practice to get to 5 wpm. And I flunked the first element 1 test I took.

I am now getting close to 13 wpm, but it depends on how my ears are behaving on any particular day. On good days I can do it, but if I'm tired or stressed, I'm back to 5 wpm in a heartbeat.

This second effort has been another roughly three month effort - this hasn't quite been every day though.

I'm neither lazy, stupid or unmotivated.

Interesting to think that under the old system, I would only just possibly be a General, and yet under the new, I am an Extra.

Considering that my main interests are the digital modes for my everyday hamming, I would probably not be anything at all, since I would have been years learning.

What is the point of learning anything that you don't want to learn?.
Why should people learn to spell now that we have spell checking?

Since 90 percent of my time on the air is PSK31 why did I have to learn
about anything else?

I guess the question is "What are YOU doing to recruit more hams",
Alun? The torch is being passed, and it is being passed to those that
"won" the code/no code debate.

I'm pretty new as a Ham, I try to recruit whenever possible, and will
welcome new hams regardless of their education. Some people might feel
otherwise at this point, having the wind knocked out of their sails, so
to speak.

You guys won. You have the ball now. Using the NCI's polled membership
as an example, you now want to make all Technicians Generals, and
advanced, Extra's. A drastic reduction in entrance requirements seems to
be the rationale du jour for the brave new Amateur Radio Service.

Really it's your ball and your game now. Godspeed!

Have any numbers on the impact of this Morse code abolition? The
earliest countries to dump Morse should have some numbers that reflect
the change one way or the other.

> Don't like the tables being turned?

No Lloyd ..... my comments had nothing to do with CW or Phone or RTTY etc. etc. My comment was based on the fact that there are what ...about 400,000 words in the English language and the consistent use of this universal "sentence enhancer" only shows the ignorance of the user. It takes a beautiful act that is a gift of God for two people to share and debases it. I think that we ALL are above that here and in our daily lives.

Take care 73 .....KI3R Tom Popovic Belle Vernon Pa

3740. Re: Can anyone explain why Technicians should be upgraded to General?

> > only be 3 license classes, then why not keep the Technician license
> > and upgrade the current Novices to Technician?
>
> Because we need to bring back the eliminated entry-level license!

The entry-level license now is the Technician. It has been obtained by
preschoolers, so it cannot be "too hard".

The old Novice license class required a simple written test and 5 wpm
code. Started many thousands of hams on their way.
>
> > If a new entry-level
> > license is necessary, then what's wrong with having 4 license classes
> > instead of 3?
>
> Because it is UNNECESSARY... the General, Technician, and TechPlus
> tests are/were virtually identical - ergo, MERGE 'EM ALL!

The Tech Plus and Tech writtens are indeed identical, but the General
(after March 21, 1987) is quite different.

And what is proposed by ARRL and NCVEC is to allow hundreds of
thousands of Techs and Tech Pluses to upgrade without any test at all.
>
> > What's wrong with compromising on #1 or #2?
>
> Forget it... NO MORE COMPROMISING!

OK, fine.

No more compromising on code tests - all license classes to require at
least 5 wpm.

No more compromising on written tests - no free upgrades.

> It has been attempted over the
> years, and all these foot-draggers want to do is pull us back to
> December 6, 1941... 'aint gonna happen McGee... It is 2004, and we
> have Cell Phones, the Internet, 125 Channels on TV, etc., etc., etc...
> time for US Ham Radio to join the 21st century.

What, exactly, are you talking about?

> Morse Code will now officially be IRRELEVANT (at least as far as
> Novice and General Classes are concerned). LIVE WITH IT.

Most of what's in the theory exams is also "irrelevant" if all someone
wants to do is use manufactured ham gear.
>
> The ARRL proposal is PERFECT... time to MOVE ON!
>
Please explain why Techs should get a free upgrade to General, and
Advanceds a free upgrade to Extra, without taking the tests for those
licenses.

Very simple, Brain.

Review the roster of active stations in each service.

Disenroll all those who are participants based upon licensure in the
Amateur Radio Service.

Please tell us how many "stations" would be left in each service after
doing that.

I repeat...No Amateur Radio = No MARS.

>" MARS >>IS<< "Amateur Radio". "

I just wanted to see what kind of reaction I'd get.

It's very predictable. Cowards never do want thier families to know about thier "alternative lifestyle".

I wouldn't want MY wife to see me acting like that and developing a reputation as not being truthful either. You DO have that reputation, Brain. Stupid assertions...tales of radio bravado...public assertions of admiration for a documented pathological liar...

Is THAT message getting through to you yet, Brain?

I wouldn't want YOU "near" my family if I knew the net result would be some revelation of alternate-reality behaviour to them.

If her reaction was anywhere NEAR "normal", she'd probably jack-slap you, tell you to stay off of the Internet, and not embarras the family name any further.

Among other things getting the Extra will allow you to work the DX where you
hear it. Assuming of course they are in the US phone bands. CW don't have
that problem. Because the DX hangs low, and everyone in the world can work
it.

You make some valid points there. And I probably fit most to all of that. Unfortunatly this has NOT happened to me since the 80s or before. It happened as soon as I came up to these newsgroups. And when the CB type of operations came to HF. And when CBers turned ham radio VHF/UHF into a pizza ordering service.

Real Ham Radio is Morse Code, and decent Voice operations. All history. And I hate that. Your right.

Hello, Mike

Actually, that jump took since 1967 to form. My parents were Republicans. I was *going* to be (couldn't vote until you were 21 back then).

I've seen what that kind of thinking can do. When I was in boot camp, someone got on the wrong side of someone. He was taken into the shower and when he came out (do *not* attempt to tell me otherwise - I was there and saw this kid when he came out of the shower), his lip was split and he had a nasty bruise on his forehead. This was company 43, Great Lakes, in 1967. I mentioned this to someone else and the guy laughed - "that was nothing. The next company over, some guy's shirt was dirty. They stripped him naked and scrubbed him over *every inch of his body* with a scrub brush!". The discription was actually more graphic than that, but I'm sure you get the idea. That second story I cannot confirm; but it finally got me to thinking. If we treat our own that way, how would we treat prisoners (from whom we wish to obtain information). Over 3 decades later, I have my answer. And a lot of non-thinkers screaming that it is nobody's fault. LOL

The city mayor (a democrat) ran agains the county treasurer (a republican) last year. The republican said "no more taxes, no reduction in service". The democrat stated "anyone who thinks we can continue services and not raise taxes is either not telling the truth or they are kidding themselves."

Of course, the republican won and became county manager. Aid was cut to the city (natch), but OMG - a *huge* deficit. They are going to borrow more funds. Their credit rating has been cut again (I think this is 5 reductions in credit rating in 6 years). Now the courts have ruled that in New York State, there is underfunding of poor school districts (surprise, surprise - all 8th graders in Mendon - a *high* income area nearby - got free laptop computers!). None of this has caught me by surprise. It isn't a matter of if; rather, when.

So, go ahead and giggle in your self-rightousness. It isn't going to change what is happening and what will happen. Perhaps we *should* give away

amateur licenses. Get some of those 20 KW class C amps up on 75 and 20 meters and out of 11 meters. Heck, if someone can afford to run a 20 KW rig, they should be entitled to do so, right? :))

You guys are a scream. Pardon me for not laughing.

Funny you should mention that. I was watching Hannity and Colmes the
other night, and Hannity was coming up with a rationale for why the
perps wre justified in treating those prisoners that way. Thought I'd puke.

Then last night I go to the local Barnes and Noble, and I see he has a
book out "Deliver us Fron Evil". That was amusing enough, but then I
read a review (plug actually) on Thebookservice.com. One of his
"Insights" as they called it was:

"Why it's so difficult for liberals to see clearly on moral questions --
including the moral dimensions of the war on terror."

> The city mayor (a democrat) ran agains the county treasurer (a republican)

Yes but....

The reality is that the "first hoop" at the Commission is the amateur radio specialist - currently an individual named Bill Cross, a licensed amateur, BTW. He's the successor to Johnny Johnston, W3BE.

His specialty is formulation of amateur radio rules and policy. Light his fire, and see how fast the matter moves through the pipeline.

Sometimes it's better if the issue is "under the radar" so the politicians who inhabit the Eighth Floor don't get involved with photo ops and sound bites as they have been with BPL, for instance.

The NCI Petition for Rulemaking gave the FCC a quick out to drop
Element 1 immediately, with sufficient legal foundation to do so
without an NPRM (I read that part thoroughly, and it's right on the
mark).

The fact that it hasn't been done means that "someone's" fire hasn't
been lighted. This is a phenominon that I am all too familiar with
when dealing with The Monkey House whether from within or from
without.

The US allows anyone - citizen, resident, or tourist - to obtain a
US license by examination.

The only exception is a representative of a foreign country. I have
a relative who is a diplomat of another country ("Country B") and
held a US license by examination before moving to "Country B" and
becoming a diplomat of that country. AFAIK s/he is able to retain
the US license as long as s/he is not accredited as a diplomat to
the United States (which is not likely to happen for quite a while
if ever).

Sorry, Mike

Guess this thing got my dander up just a tad. The most frustrating thing is that I can see something wrong, but I'm at a loss for an answer. Should a unit come under fire (and I've been combat stations aboard ship), everyone *has* to follow orders. Period. Lives depend upon it. So, the military wants to weed out folks that aren't suited for military life, and some problems occur. What the proper answer is beats the heck out of me.

Certainly, in civilian life, we should at least be civil - even if we don't agree ;)

I guess that the actions of a few amateurs I would not consider at all "considerate" and I'm not too certain about "civil" either.

Off my soap box (finally - LOL)

What sort of numbers? All their no-coders are licenced for HF, and we could
probably find out how many there are, but is that what you meant?
Violations of rules by no-coders? We have that number - it's zero.

Hmm, I though it would be obvious. How many new hams are licensed in
the countries that have eliminated the Morse code requirement

NOw that they are rid of the evil of Morse testing, one would think
that many new hams are coming into the fold, so to speak.

All these countries had no-code licences. So now they can use modes other than CW on HF without having to learn CW, which is finally as it should be. Most of the true radio enthusiasts will get whatever licence they can, even if it doesn't allow them to do what they really want.

I always used to meet people who told me they would get a licence but for the code test. I think we could have had them in the hobby if we had abolished code testing 20 years ago, but I think it is too late and we have blown it. Nobody is clamouring to becme a ham anymore.

3774. Lib Nutz Over The Top Again

Dumbass Vic, W1WCR, was spouting his lies on the Lib Net again tonight.
Dumbass said the United States provided Iraq and Saddam Hussein with the poiseness gas Hussein used on the Kurds. Vic said the gas was used to kill "a few" Kurds and Sheites.
Duh! Apparently Vic views the 5,000 gassing deaths of the Kurds as being "a few".
Where the heck does Vic manufacture these "facts" from?
Oh, wait. For guys like Vic and his malingerers it is not necessary to have facts OR proof. Any lie will do and Vic is surely full of them.
Aside of Al Jazeera, Vic is the best propaganda machine that Saddam could hope for.

These guys are nut cases in the extreme. A bunch of cranks, kooks, and a conglomerate of conspiracy theorists.

I recall that even before any petitions were filed, both of us agreed
that if FCC "wanted to", Element 1 could be simply dropped once the
treaty changed. I believe the procedure is called "Memorandum Report
and Order" (could be some other name) but in any event a lot quicker
and simpler than a complete NPRM cycle.
>
> The fact that it hasn't been done means that "someone's" fire hasn't
> been lighted.

Right. Could also be that "someone" doesn't want to get in the middle
of the catfight and get scratched by both sides. In which case the
thing to do is to entertain all sorts of petitions, (we're up to what
- 17-18 of them so far?!) collect comments and reply comments and even
ex partes on each of them, and allow the whole thing to percolate
through the great bureaucratic machine. Then, when the flood of
petitions has been reduced to a trickle, issue an NPRM with long
comment time (like 98-143). Resolution of the issue could take years -
and every new petition just resets the clock.

IOW, don't hold yer breath. Lookit how long it took for the "incentive
licensing" proposals of the '60s to take place. First proposals in
1963, final plan in 1966, major changes in 1968 and 1969. And they had
far fewer proposals back then.

Why? Those accomodations and adaptations are all part of the rules. In
fact, a lot is left to the VE's judgement. For example, a *sending*
test can be substituted for the receiving test if the VEs think it is
justified.

What would you suggest?

Here's what one ham is doing - and has been doing for years. I don't know this ham personally, but he is right here in EPA. Note the results and the reactions he gets. The following is a direct quote:

BEGIN QUOTE

I have had the privilege of teaching an after school activity, at the local middle school, for five years. I named it Tune in the World, and it covers many aspects of radio and television, and of course, pushes ham radio. Each year I have had several students, both boys and girls, obtain their license and try to help them continue on the hobby.

With this as my basis, I can tell you that 95% of the students were a pleasure to work with and each year the district offers me a nice salary to teach the class and each year I decline it. Yes, it is a lot of work, but the students enjoy it and come away with a very positive idea of ham radio. The attention span varies, but I have found that I have to work at making sure I have an interesting program and that no part of it goes on and on and on. I set the rules at the first meeting and have not had any serious problems. (My son and his friends have been my biggest problem.)

If one expects the students to sit in their chairs and listen to a presentation for an hour, after being in school all day, they good luck. I combine power point presentations, live demonstrations, parts of ARRL videos short movies, simple building projects and computers. Interestingly, the students are always VERY interested in the Morse code and seem less so in modes connected with the computer.

I am not a STRONG disciplinarian, but we have rules and the kids obey them and something must be going right, a few kids who were in the previous class

always take the next year's class and we always have 35 to 40
students. In
fact, my biggest problem is that other students want to join the class
after
it has been on a few weeks.

Last year at the last minute, I offer the Radio Merit Badge at Boy
Scout
Camp. I was given a terrible time and hoped for six kids. I had over
1/4
of the camp at the classes and more wanted to attend. We got a dozen
hams
out of that one.

So, if we want to get new, young hams, then think about reaching out
to the
Middle Schools, and Scout Camps. Just the camp alone, with eight
weeks of
camp, would produce between 80 and 100 new hams....with about 400
Scout
Camps in the USA, (Cub and Boy Scout) that would mean a very nice
increase
in our membership.

I do agree, that like every previous generation, the new hams need
help in
getting into the hobby and if nothing else, get their email address
and send
them info as well as forwarding the address to the ARRL, and local
clubs.
We can sit here and complain about the lack of young people in our
hobby, or
we can do something, or expect someone else to do it. Ahhh, it is
easier to
complain...right?

END QUOTE

Note particularly when he writes:

"the students are always VERY interested in the Morse code and seem
less so in
modes connected with the computer."

A block to the license process?

> I guess the question is "What are YOU doing to recruit more hams",
> Alun? The torch is being passed, and it is being passed to those that
> "won" the code/no code debate.

Exactly.
>
> I'm pretty new as a Ham, I try to recruit whenever possible, and will

> welcome new hams regardless of their education. Some people might feel
> otherwise at this point, having the wind knocked out of their sails, so
> to speak.

My policy has always been that if they have the license, they're a
ham.

> You guys won. You have the ball now. Using the NCI's polled membership
> as an example, you now want to make all Technicians Generals, and
> advanced, Extra's. A drastic reduction in entrance requirements seems to
> be the rationale du jour for the brave new Amateur Radio Service.

Exactly!

And who can really argue against it? Remember the question "why does
someone have to learn code to operate voice"? Well, if you accept that
argument, then what do you say when someone says "Why does it take a
Technician license to operate legal limit SSB on 2 meters but a
General to do the same thing on most of 20 meters?" and "Since the
Technician written allows maximum authorized power on all authorized
modes allocated to hams above 30 MHz,why is more theory testing needed
to do the same thing below 30 MHz?"

Etc.

>Really it's your ball and your game now. Godspeed!

Don't hold yer breath, Mike.

Yup! And do me that is the most damning indictement of the NCI crowd.
Simply petitioning to simply dropo Element 1 would have been consistent
with what we had heard their aims were all along.

But that wasn't quite enough was it?

With all the complicated petitinos out there, I think it is time to add
mine. Maybe in a year or so, when the initial furor dies down....

I *really* like my prediction in the poll. 8^)

If you are right, then the US will be the last country with a code test, decades after it no longer exists anywhere else. I don't think it will take that long, though.

Firstly, I think the reason they didn't go for a memorandum report and order is more mundane. They don't care about any catfight because they don't care about amateur radio, period.

Secondly, I don't think they will wait for any more petitions.

Thirdly, I think that when the dust settles they will just do what they were going to do anyway. Eliminate Element 1.

In the recent NPRM I submitted comments that many of the proposed changes, although good, were mooted by the fact they referred to the former ITU code test requirement as if it still existed. If they don't issue an NPRM on this matter they will get comments on it submitted in every other one. I know this because I will personally see to it.

As for any further restructuring, there are two separate issues:-

1) Re-farming the Novice frequencies an increasing the phone allocations. Here there is already an NPRM, and I think they will carry it out. It just gives the same amount of additional spectrum to phone as is now Novice CW. This is what they are going to do. It's less than I wanted, and even less than the ARRL or the NCVEC asked for, but I'm betting it's all done;

2) Eliminating supefluous licence classes. They will ultimately just do the obvious, i.e. give Novices and Advanceds a free upgrade. They won't revive the Novice and kill off the Tech. They will view that as a waste of time. The FCC is all for simplification, and they will point to the petitions as providing the consensus they were looking for, even thought they are slightly different.

I applied to be a counselor for the radio merit badge in boy scouts a
couple of months ago, but haven't heard anything back yet. The troop leader
is more interested in finding someone for the computer badge.

73 de Alun, N3KIP

PS: The requirement for a CW QSO has been dropped from the badge, which makes it more practical for me to do it!

3780. Cingular Warns Of Weather Related Limitations In Hurricaine Areas

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-09 13:13:18 UTC
From: k4yz@aol.com
Message-ID: <20040509091318.23382.00001100@mb-m14.aol.com>

Hello Everyone,

I picked this up off of my listserver group "CitizenSoldiers" on YahooGroups. I find it interesting that Cingular actually went to the effort of acknowledging thier limitations. I wish they'd actually said something to the effect of "if ya ain't bleeding or drowning, stay off the phone"......

Steve, K4YZ

QUOTE

Cingular Wireless Recommends an Emergency Communications Plan

SAN ANTONIO, May 5 /PRNewswire/ -- The 2004 hurricane season is about to begin and Cingular Wireless wants consumers to be armed with the knowledge they need before a hurricane or severe weather hits. Consumers need to understand what to expect when they use their cell phones or other wireless devices during an emergency and what they can do to prepare. Cingular is offering consumers some simple tips to help maximize their wireless service during an emergency situation.

"Taking the time to plan now can make a considerable difference in how much a hurricane or any severe weather affects your family or business," says Andy Shibley, vice president and general manager for Cingular Wireless in South Texas. "Any emergency plan should include a communications component, too, so that every member of the family knows who to contact if they get separated."

There are many weather-related events that can put you in a dangerous situation if you are not ready. According to the National Hurricane Center, hurricane hazards take many forms: storm surges, tornadoes, high winds, and flooding. By understanding the potential dangers, you can ensure your family is ready.

What can you do to prepare yourself before severe weather hits?

* Program in all of your emergency contact numbers. Program in 9-1-1, the police department, fire station and hospital contact numbers as well as your family members into your cell phone so you don't have to think about it during and after an emergency.

* Have a family communications plan in place. Designate someone out of the area as a central contact, and make certain all family members know who to contact if they become separated.

* Keep your wireless phone batteries charged at all times. Have an alternate plan to recharge your battery in case of power outages.

* Keep your wireless phone dry. The biggest threat from hurricanes is water versus wind damage so keep your equipment safe from the elements.

* Forward your home number to your wireless number in the event of an evacuation. Since call forwarding is based out of the telephone central office, you will get incoming calls from your landline phone, even if your local telephone service is disrupted at your home. In the unlikely event the central office is isolated, call forwarding may not work.

* Consider additional cell phones for your family's use. If you want to add additional cell phones to your wireless service, remember to do so prior to the emergency.

What can you expect from your wireless service during severe weather?

* Remember, wireless phones are complex radios. Your wireless call travels over airwaves to another phone, and just like radios, wireless calls can be obstructed by bad weather.

* It is important for consumers to keep in mind that during an emergency, many more people are trying to use their cell phones at the same time when compared to normal calling activity. When more people try to call at the same time, the increased calling volume may create network congestion. Network congestion can cause "fast busy" signals from wireless phones during times of heavy wireless phone usage, such as during an emergency. Customers may even receive a message that says, "Your call cannot be completed at this time." If you hear this message, simply hang up, wait a few seconds and retry.

What can you do to get through to loved ones during an emergency?

* Try short/text messaging service (SMS). More than 70 percent of Cingular phones are SMS capable. Also, if you have a wireless data device such as a BlackBerry, you can use its messaging capabilities to communicate. Depending on your call plan, additional charges may apply.

* Use a landline phone if it is available. In many instances, landline service may still be available in your area so this still may be an option.

* Keep non-emergency calls to a minimum; limit your calls to the most important ones. Chances are that if there is severe weather, many people will be attempting to place wireless calls to loved ones, friends and business associates. If the landline phones are not working, this probability increases.

* Wait 10 seconds before redialing: If you do hang up before your call has gone through, pause before you redial. This allows your original call data to clear the network before you try again.

>If you are right, then the US will be the last country with a code test,
>decades after it no longer exists anywhere else. I don't think it will take
>that long, though.

I was afraid of this.

Despite supporting Code testing, I am also of the mind that once the
majority has spoken, it's time to move on.

They could have pre-empted all this by stating something to the effect of
"based upon recent previous commnets on the subject, we are suspending the
requirement for Element 1 for access to HF licensure"....But nooooooooooo...

>Firstly, I think the reason they didn't go for a memorandum report and
>order is more mundane. They don't care about any catfight because they
>don't care about amateur radio, period.

They really don't care about ANY radio, if you pay close attention to
thier "thought processes" in other actions, Alun. I really don't think there
are too many people up there who have a clear picture of what's going on in ANY
radio service.

>Secondly, I don't think they will wait for any more petitions.

Sure they will! They are BUREAUCRATS! They are >>all about"<< petitions,
applications, hearings, and the PROCESS of administering...They are poorly
prepared to deal with the EFFECTS of thier actions!

>Thirdly, I think that when the dust settles they will just do what they
>were going to do anyway. Eliminate Element 1.

Months and months later.....

>1) Re-farming the Novice frequencies an increasing the phone allocations.
>Here there is already an NPRM, and I think they will carry it out. It just
>gives the same amount of additional spectrum to phone as is now Novice CW.
>This is what they are going to do. It's less than I wanted, and even less
>than the ARRL or the NCVEC asked for, but I'm betting it's all done;

I dunno.....

There's been what...a half dozen petitions in the last five or six years
asking for the same thing and the FCC keeps thumbing thier noses at it...I

don't understand why since the Novice license hasn't generated much interest since 1987

>2) Eliminating supefluous licence classes. They will ultimately just do the >obvious, i.e. give Novices and Advanceds a free upgrade. They won't revive >the Novice and kill off the Tech. They will view that as a waste of time. >The FCC is all for simplification, and they will point to the petitions as >providing the consensus they were looking for, even thought they are >slightly different.

I really doubt they will "upgrade" the Novice since it's rapidly withering to nothingness...The Advanced...?!?! Maybe, but a lot of the Advanced guys see >THIER< license as being the last readily evident class as having been 13WPM/Old School tested and want nothing to do with "upgrades".

> blown it. Nobody is clamouring to becme a ham anymore.

My life's experience has been that for every hobby or avocation, there is a large group of people that "would do it except for....". What they are actually tell you when they say this is " I have a passing interest in this. But I'm not so interested that I will become a participant".

Whether it is the Morse code requirement, or the cost of a rig or effort of putting up an antenna, or the cost of a telescope or the need to travel to remote areas that are dark enough or the fact that you have to stay up all night to observe, etc, etc.

People in amateur astronomy also obsess about the graying of the hobby, and how do we get the kids involved? Fact is, a scope that can actually be used for any kind of passable observation costs a fair amount of money. And ohhh geee, the dufusses that wanted to get the little kids interested in observing seem to have forgotten that Mommy and Daddy don't want little Buffy or Jody (and by extension, Mommy or Daddy) to be staying up all night and traveling to remote sites.....

In ham radio, a person not only has to have the interest, they have to be willing and able to spend a fair amount of discretionary income on a rig, put up an antenna, (if they are even allowed to) and all the other things we have to do to get on the air.

Any wonder why lots of the new guys are the shack on the belt types? For kids, usually dependent upon M&D for their money, M&D are often happy to spend 100-200 dollars on a HT. They might not look so happily upon laying out $800-3000 for an hf rig, and putting up that antenna. All the young hams in my area are repeater people, save for Field day.

Finally, the comparison of ham radio to the internet is amusing at best. There is almost not technical comparison between the two. Beyond the technogeeks such as myself, that spend a fair amount of time keeping other peoples computers on the stinkin' Internet, the technical acumen level is mighty darn low. How much ability is needed to surf porn?

My points are that blaming the lack of growth (which is an arguable thing in the first place) on the Morse code test is kind of like saying that a frog with no legs that can't jump when you tell it to jump, is deaf.

It is a hobby for the dedicated and relative few.

I think maybe you are a bit confused, so I guess I need to explain a little more. The radio merit badge used to require the boys to participate in 2 CW QSOs and 1 phone QSO. Now that requirement is just for 1 QSO in any mode. Some phone ops used to teach the badge and do CW QSOs by computer, which had the added advantage that the boys could see what was being said, whilst others used to get a CW op to participate (the counselor tests the boys, but anyone can provide the instruction/demos).

The QSO requirement is only one from a long list, and can be satisfied by boys with a ham licence if they submit 5 QSL cards from 3 call districts. The boys who are not hams (obviously the vast majority) just have to sit in on a QSO instead.

One of the other requirements is to draw a frequency chart, and there are very specific rules about what it has to show. The funny thing is, the example in the book doesn't comply. It was done by the ARRL, but I don't think it was created specially for the purpose. I think it was just something that already existed that they let the boy scouts use. One of the questions I am contemplating is whether I should give credit for copying it, or whether they should have to do it properly?

WE haven't "blown" anything..."They" have had the opportunity to get a
code-free license for what...12-13 years now..?!?!

If it weren't the Code test, it would be the written....If it's not the
tests themselves, it's the perception that you have to have to have enough
equipment to rival VOA

> My life's experience has been that for every hobby or avocation, there

I guess "fair amount" is realtive. You can put up an effective HF/VHF/UHF
station for under $350/400 if you do a bit of shopping and don't want all the

latest bells and whistles. Then there are they guys with TOO MUCH "discretionary income" and have stations who look like the aforementioned VOA outlets!

> Any wonder why lots of the new guys are the shack on the belt types?

Yep...like I said...Amateur Radio (for those who participate regularly) has almost always appealed to a very narrow segment of society and always will. All we need to do is keep it out there in front of those "potentials" and wait for them to decide for themselves.

The FCC has a real nice chart available from GPO and is all inclusive from
a few KHz up to, I beleive, 300GHz. It might go higher.

That's a good point. I understand that Icom has one you can download, although I don't know if it meets the requirements. I'm sure the FCC chart meets all possible requirements, though.

This isn't something new nor is it specifically related to wireless phones. The 'wired' phone system has also been saying exactly the same thing since Moby Dick was a minnow. "During emergencies (bad weather or whatever) our systems may be overloaded by the surge of callers." Obviously (as Cingular correctly points out) the wireless infrastructure has an increased level of vulnerability over a strictly 'hardwired' phone system of yore. No surprise there! The Cingular instructions seem to me honest, useful, and corporately responsible.

In 2004, following exhaustive input from persons concerned about the future of Amateur Radio, a revised version of the FISTS proposal became the basis for new USA Part 97 regulations became effective. It was decided only high-quality, technically competent individuals should be licensed; and quality is more important than quantity. Telegraphy testing speeds are 13 wpm for Technician, 20 for General and 35 for Extra, requiring one minute of perfect handwritten copy and demonstration of sending proficiency. Written examinations correspond with BS, MS, and PhD EE curriculum respectively per license class. The prestigious accounting firm Price Waterhouse agreed to monitor and validate testing sessions on the stipulation that examinees agree to a 30 minute presentation on portfolio management.

The FCC license database was finally purged of bad data when Amateur Radio was renamed the Professional Radio Volunteer Service to more accurately reflect the prevailing high standards in the US. It was discovered the database included deceased licensees beyond all estimates. The total number of licensees was found to be 28% fewer than previously indicated.

By the end of the first ten-year cycle under new regulations (2004-2013), 61% of existing licensees failed their mandatory retests while 11% chose to return their licenses for cancellation rather than re-sit the test. New licensees entered the ranks at the rate of 13 in the first year, leveling off to a smoothed average of 9 over each of the following years. The median age of licensees reached 76.

Fourteen days each year, major contests continue to bring activity to some HF and VHF bands in the US. All other times are declared off-peak. Beacon stations transmitting high speed Morse code advise interested parties when on-air activity will resume in accordance with the next scheduled contest.

A milestone was reached in early 2017 when internet penetration into US Households reached 100%. This allowed for low-cost surveys of all licensees. The Professional Radio Volunteer League (PRVL) headquartered in Oldham, SD posed the question "Do you presently own and operate radio equipment?" A yes response was submitted by 23%. Later it was learned many of the respondents were referring to their Wi-Fi networks. A rephrased question yielded a yes answer from 15%. Analysts determined 11,987 licensees were using their radio privileges for the purpose of communications with others. Some operators expressed dismay over the relatively low numbers and mostly vacant radio spectrum. Persons concerned about the future of the Professional Radio Volunteer Service reminded everyone it's still all about quality and not quantity.

That brings us to the prevailing conditions today in 2029. Medical technology continues to extend life expectancy, but the advances however magnificent, cannot keep pace with the demographic profile of Professional

Radio Volunteer Operators, now numbering 3,632 with a median age of 83. The latest survey indicates 4% are active on the air during one or more contest days.

On the international DX scene, the United States is a rare one, prompting great interest in DXpeditions to the US. Until recently, the issue of reciprocal operating permits had not been resolved, as the US is the only country in the world still requiring telegraphy for HF access. The two persons concerned about the future of the Professional Radio Volunteer Service reluctantly agreed to allow operators from other countries access to the HF voice band consisting of 15 kHz on 29 MHz. Visitor access to all other HF spectrum, 99 percent CW and 1 percent Data, remains strictly prohibited.

A DXpedition team member asked, "Didn't the Yanks used to have a lot of operators back when they had Amateur Radio?" No one knew.

--
"All persons, living or dead, are purely coincidental, and should not be construed."

(Note from BGO: This actually came from the USA, attributed to W8MW, unknown to me but with no doubt a wise man.)

Sincerely 73,

Barnabus Gr&#65533;mw&#65533;tch Overbyte

I'd say make them do the chart by the rules of the merit badge. There's very little to be learned just by copying a pre-existing chart. Of course they should be allowed to use the ARRL one (and others) as an information resource.

In the real world of work, one frequently has to reformat information to meet customer formatting requirements.

Do we really have that number, or is it just "we haven't heard of
any"? Sounds a lot like the BPL folks who say "we haven't gotten any
interference complaints".

I'm not sure at all what you mean.

> I always used to meet people who told me they would get a licence but for
> the code test.

Me too.

I've also met people who told me they would get a license but for the
written test. Or the high cost (to them) of equipment. Or the size
of the antennas. Or the time/money/space/work required to set up an
antenna.

I've also met people who told me they would get a license but for
their job, spouse, kids, extended family, living situation, school
situation, other commitments, etc., etc., etc.

> I think we could have had them in the hobby if we had
> abolished code testing 20 years ago, but I think it is too late and we have
> blown it.

The Technician lost its code test more than 13 years ago. It's been
possible to get full HF privileges in the USA since 1990 with just a 5
wpm code test (medical waivers, then restructuring).

Most of all, code testing could not have been fully eliminated 20
years ago because of S25.5. Nor even 20 months ago.

>Nobody is clamouring to becme a ham anymore.

Sure they are - otherwise the number of hams would be dropping like a
stone.

Let's do some math:

There are about 682,000 US hams right now. That's currently licensed individuals, not clubs or folks in the grace period.

Suppose the *average* ham career lasts 40years. Yes we all know plenty of folks who have been licensed longer, but there are also folks who will have to reach their 100th birthday to do that.

If the average ham career lasts 40years, it works out that 2.5% of the ham population drops out per year. 2.5% of 682,000 is 17,050, so we must get 17,050 new hams per year just to keep up with the losses.

You can work out the numbers for any given "ham career" time.

Now of course it's not enough just to stay even. But still more important is the number of *active* hams.

That's pretty much what I was thinking. I just wanted to see if others would agree. The league's chart in the scout merit badge book covers a slightly wrong frequency range, and it doesn't really show the required 8 services. At least, it sort of does, but it mixes some services together while separating some users that are part of the same service.

I was wondering if I was being too pedantic, but I tend to think that maybe it is best to ignore that chart and show them one that is more correct. I imagine the FCC chart is super correct There again, were the scouts really meaning to imply the proper definition of a 'service' in their requirements? Maybe they had something vaguer in mind?

Hello, Mike

Yep, I *love* that suggestion about programming in 911. Now, instead of having to hit three buttons (9-1-1), you simply hit "memory-0-1".

Wow! I *am* impressed :))

I also like the idea about buying more cell phones. If the lines are all busy due to overloading, you have your whole family try dialing on 10 cell phones. You increase your chances *ten* times! Reminder to self: go buy 100 lottery tickets; instead of 1 chance in 12 million, I'd have one chance in 120 thousand. Golly gee. Who'd have thunk?

Some citizens of Canada speak English, and some even operate phone in
our CW subband while speaking English.

I don't know how much more related it can get to what you said. Any
ideas?

Nope, wrong again. Finding such a citation is not only very
difficult, but it is impossible because it doesn't exist except in one
nutter's mind.

> Review the roster of active stations in each service.

They have MARS calls.

> Disenroll all those who are participants based upon licensure in the
> Amateur Radio Service.

I have no such authority.

But you might want to see if JJ can do it. He speaks for both NORAD
and FEMA.

> Please tell us how many "stations" would be left in each service after
> doing that.

I have no way of knowing.

> I repeat...No Amateur Radio = No MARS.

That's nice, but what about this statement?

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

Exactly how is MARS amateur radio?

Do you know the transitive property of your false little equation?
Doubt it.

> >" MARS >>IS<< "Amateur Radio". "
>
> >" MARS >>IS<< "Amateur Radio". "

You do have trouble staying on topic, don't you?

So when are you going to fire up your MARS net on amateur radio
frequencies?

Hey, when are you going to fire up amateur radio on MARS frequencies?

Be sure to invite Reilly to both.

After all, " Sorry Hans, MARS >>IS<< "Amateur Radio" ," according
to one nutter on this planet.

>
>You do have trouble staying on topic, don't you?

None at all.

YOU mentioned family, Brain. I only asked if your wife knew how foolish you act in a public forum.

And I repeat my previous question...Is THAT message getting through to you yet?

>So when are you going to fire up your MARS net on amateur radio
>frequencies?

It's perfectly legal for most MARS personnel to conduct a net on Amateur frequencies, Brain...just as it is for gardners, NASCAR fans and other hobbyists

>Hey, when are you going to fire up amateur radio on MARS frequencies?

You're not, if you value your license, Brain.

>Be sure to invite Reilly to both.

Sure. And while he's listening, I think we'll ask HIM what major role non-licensed radio services play in emergency communication.

>After all, " Sorry Hans, MARS >>IS<< "Amateur Radio" ," according
>to one nutter on this planet.

No Amateur Radio = No MARS.

You've still not been able to tell me how I am wrong, Brain.

Yet another assertion you've made that remains unsubstantiated.

Putz.

3807. The impact of the abolishment of CW in France

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-09 18:59:46 UTC
From: Anonymous via the Cypherpunks Tonga Remailer <nobody@cypherpunks.to>
Message-ID: <a985062c4dda401fc13873ca0afd1c1e@cypherpunks.to>
Source record: 91823

About 16000 hams in France (mean age
75 years old). Half are no-coders. In
the other half, about 1000 passed a real
CW exam (the majority have fake military
certificates or are invalid or got their
their HF ticket by corruption).
No-coders are the youngest hams and the
best technicians (except the CBers like F4DBD).
Statistics on the last licenses show
that new hams choose to pass the
NOVICE license (F0) authorized to use
only the 2m band with 10 W. Very few class 2 (technicians) and no new coders
(class 1) join the hobby.
About 10 per cent of hams are active, so
the abolishment of CW will bring about
800 new hams on HF bands with F1 and
F4 prefixs (mean age 45 years old).
It remains about 100 coders in France
on the bands, most of them are
military or navy retired people.

So if you plan to sink with your boat
on the french coasts and want to be
rescued, use your microphone rather
than a CW key to have a chance to
be heard.

Jeebus on a rocket powered sled in the Utah desert!
Do you mean to say that those imbred freaks on the
Saturday night Liberty Net are still around....??
I would have thought by now that 80% of those bitchin
and moanin fatasses would be six feet under by now.
I can recall listening to them outgass back in the 80's
and I can only imagine how pathetic they must ound now
20+ years later...!

> Duh! Apparently Vic views the 5,000 gassing deaths
> of the Kurds as being "a few".
> Where the heck does Vic manufacture these "facts" from?

Does Vic still have that ANNOYING habit of eating while
he is talking? I can recall years ago this bozo saying he was
stuffing his face full of apples (like a demented chipmunk)
and talking and slobbering all over his mic. I'll bet you dimes
to a dozen Krispy-Kreme doughnutz that ole Victor has
balooned up to near 300 pounds. Probably looks just like
ole fat Junkyard Sid in Estenchia N.Mex. Poetic justice?

Does ole KJI still get on there and drive them up the
wall or has he keeled over into cemetary mulch by now also..?

> Oh, wait. For guys like Vic and his malingerers it is not necessary to
have
> facts OR proof. Any lie will do and Vic is surely full of them.

> hope for.

Vic & Baghdad Bob (r they one and the same??) rotflmao!

> These guys are nut cases in the extreme. A bunch of cranks, kooks, and a
> conglomerate of conspiracy theorists.

Does Harrisson from Florida still get on there and
monologue and play his stupid tapes? How about
that other guy DKJ? He used to get on from W. Va
was a former KKK and every other word was "nig--r".

Does the 14313 dentist from NNJ and the nutcase
from Central Pa still qrm them for hours at a time?

Jeeze, I gots to listen there next week. I bet half of the
guys who used to get on there from the 80's are either
dead or so hen-pecked their wives won't let em on
anymore. Probably all new lineup of kooks and goofballs.
The Lib Net was always one of ham radio's biggest "kook
magnets"...

VOTE FOR A LEADER
Chuck Gysi, N2DUP for ARRL section manager in Minnesota

NEWS RELEASE

For immediate release
May 9, 2004
Contact: Chuck Gysi, N2DUP / N2DUP@RadioHams.net

NOTE TO EDITORS: A digital mug shot of Chuck Gysi, N2DUP, is available via e-mail request. Please specify the file format you prefer.

N2DUP announces run for ARRL Minnesota section manager

Chuck Gysi, N2DUP, has announced his candidacy for Minnesota section manager in this summer's election in the American Radio Relay League.

Gysi is a long-time ARRL volunteer and has been an active amateur radio operator for a solid 22 years. He chose to run for the section manager's position because of his leadership experience.

"I have a lot to bring to the section manager's position," Gysi said. "I am the best candidate running because of my leadership skills and long-time involvement as an amateur."

The section manager oversees the more than 2,500 ARRL members in Minnesota and appoints hams to serve in capacities ranging from official observers to public information officers.

"I can bring the ARRL Minnesota section back on track and fill unfilled key appointments," Gysi said. "I have served in a number of key ARRL positions in the past and know how to find the best people to get the job done."

ARRL members will receive ballots from league headquarters in Newington, Conn., about July 1.

Gysi currently serves as an ARRL public information officer and also has served as emergency coordinator, district emergency coordinator and official emergency station. He is a member of the Rochester Amateur Radio Club and the Minnesota Wireless Association. He also has served as a volunteer in amateur radio communications during his entire 22 years as a ham operator.

"I am the only qualified and experienced candidate running for section manager," Gysi said. "The Minnesota section has a lot of work ahead that needs to be done and only an experienced candidate can handle the task. That's why I ask you to vote for a leader. I look forward to serving my fellow ARRL members in our great state."

Gysi is available to make presentations at club meetings or other gatherings of hams anywhere in Minnesota. Call him toll-free at (888) 463-5355 or send an e-mail to N2DUP@RadioHams.net. In addition, he has set up an extensive web site about his candidacy at www.RadioHams.net.

I live in hurricane country along the Gulf Coast, and I can tell you
that the advice given by Cingular is moot. The fact is that there is
almost no cellular service available from the time that a hurricane
is within 24 hours of possible landfall in any nearby area.

If you try to make a call, you'll get no response from the overloaded
cell system. A land line telephone will be the only operational phone
in your area, and even with it, you may have to wait for several
minutes to get a dial tone.

I have evacuated my residence on several occasions (the last one
happening when a cat 4 hurricane was bearing down on our area), and in
no case was a cell phone useful for making calls to do something like
reserve an inland hotel room. In every case, I was thankful that I
had a regular, land line telephone for that purpose, because that was
the *only* telephone that worked.

Again, let me repeat that there was no severe WX around yet; there was
only the prediction of severe weather in effect.

Cell phones are a joke in emergency situations, because cell systems
have little reserve capacity built in and are quickly overloaded.
They are totally useless and you shouldn't even assume that they are
going to work during an emergency situation.

I still take my cell phone along when I evacuate, but I always assume
that it will only be useful AFTER the storm has passed.

I am ready. I got rid of my cell phones 3 years ago. And now have two
pieces of wire connected to tacks on a plywood base. These are all hooked
to a ham CW transmitter.

Oh no...that won't work either. No one knows the code anymore.

Technology....ain't it wonderful?

Why is that Alun? Do you think that getting out a decent signal on HF is a
piece of cake?

Daily I hear the newguys trying to contact someone. Getting sorry pathetic
signal reports and going away in frustration.

Wonder how many new HFers we lose like that? You know the ones that believe
its soooooo easy to get up on HF? Probably hundreds per week.

I do the best I can when I hear someone like that. But it gets really old
when you trying to have a conversation with a bud, to talk to all the S2
signals.

Perhaps 'giving' out HF is NOT the answer as you think.

That was not the question that I asked you.

Are you going to conduct a MARS net on amateur frequencies?

> >Hey, when are you going to fire up amateur radio on MARS frequencies?
>
> You're not, if you value your license, Brain.

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

so,

" Sorry Hans, Amateur Radio >>IS<< "MARS". "

Both are false statements.

> >Be sure to invite Reilly to both.
>
> Sure. And while he's listening, I think we'll ask HIM what major role
> non-licensed radio services play in emergency communication.

You won't be asking Reilly anything because you won't be conducting a
MARS net on amateur frequencies, or an amateur net on MARS
frequencies. The reason I say that is because MARS IS NOT AMATEUR
RADIO!

If he did get that diplomat accreditation, the FCC then couldn't do
anything to him. Hell,
you can shoplift and go drunk driving and they can't touch you if you're
a diplomat. The
only way New York City gets diplomats to pay up on parking tickets is to
tow his car
away, and he has to pay the tickets to get it back.

DXpeditions are scheduled only at sunspot peaks, making the USA a very
rare one. :-)

However there have been many improper cross-service contacts between
foreign hams
and American CB operators running split frequency/band/service. Even
CBers with type certificated legal CB
rigs running SSB and AM when conditions are exceptional. (They use ham
receivers to hear the
foriegn hams).

;-)

I have gotten in the habit of simply saying or writing 73.

Beyond that, I find the argument of "what is correct" kind of amusing.

Too many hams seem to want to control what others say. Just like the fellow that was lecturing another on saying "please copy" in a contest exchange instead of what he wanted to hear.

Especially with all the different shorthand abbreviations that CW ops use, I can't get very excited about 73 vs 73's.

The only thing that bothers me is the habit of some hams to say HI HI on vocal QSO's. It is either funny enough to continue laughing or it isn't. Seems like a person saying HI HI is saying "well, that was funny, but not all that funny. Obviously HIHI has a place in Morse ops.

More likely you will see a lot of existing hams upgrading, like what happened
after Restructuring in the USA. Do all French no-coders get access to all of
HF? Or just some small subbands? Likely they will still need to take and pass some written tests to get access to all of HF.

I dunno, "Buy more cell phones but don't use them because lot's of
people are using them". just doesn't sit well with me.

If a person has limited funds for emergency preparedness, would it be
better to spend that money on extra cell phones that they "should not" -
or more likely can't use, or maybe things like flashlights, food, water,
batteries.

We have 2 cell phones. They are there, but aren't a part of my
emergency plans.

Other than that, their piece is okay.

That is an important consideration. When there is an emergency, such as ice storm or hurricane or the like, it is incredibly compelling. Parents want to call their parents, big sis wants to call her best friend to see if she is alright, and little brother want's to compare freaky disaster notes with his bud's.

If you've ever been in one, it is almost impossible to resist. You know that loved ones are worried sick about your predicament, and if you have a family of 3, and 3 cell phones, I'll wager that all three will be tried.

>
> 73 from Rochester, NY
> Jim AA2QA

And from your QTH, I know you've been involved in some wethear disasters lately! 8^) We've hade them here in State College over the last 10 years, and cell service has gone out almost immediately. More cell phones will simply put it out of commission a few seconds quicker.

> Oh no...that won't work either. No one knows the code anymore.

The way I look at it is that there are levels of disasters. Small scale stuff will work with cell phones.

Big disasters need hf comms. If a really big one comes along, that CW is going to start looking pretty good. For all the ops that might think that phone is the way to go - and if the conditions support it, then that's great.

But if you are the station trying to get communications going from a devastated area, you might be trying to nurse a station along on a weak battery, or working with a jury rigged antenna of questionable performance, that CW operation may just be critical.

I am marginal at Morse CW, (by comparison with most) but I can do it acceptably when I need to.

And that is why I support the continued testing for it. We *don't* know who is going to end up being the point man in a big disaster, but whoever it is should know how to communicate with whatever they can communicate with.

And that is what I think a lot of people DON'T UNDERSTAND. It isn't about the person sitting in comfort taking info from the disaster area. It is about the random ham that is at ground zero. Is he or she going to be able to do the job?

Of course I am one of those nerds that takes all the Red Cross courses in first aid and CPR and defib etc. Hopefully I'll never need to use this training beyond the first aid part, but I suspect the person that I am called upon to help in extremis might find that training of interest!

> Technology....ain't it wonderful?

Sometimes!

>
>Please stay on subject and quit resorting to personal attacks.

It's not "personal attacks" if it's true.

And I STILL doubt you have adequate authority to wipe with your
non-dominant hand without written permission.

>> Subtract the participation of licensed Radio Amateurs and what do you
>> have...???
>
>Answer the question, if you can.

I have.

I continue to ask YOU what would be the result if all those licensed
Amateurs quit the MARS programs tomorrow. You refuse to answer.

>> >Do you know the transitive property of your false little equation?
>> >Doubt it.
>>
>> My statement is not false.
>
>Your statement is false.

No. It is not. No Amateur Radio = No MARS.

>> Sure. And while he's listening, I think we'll ask HIM what major role
>> non-licensed radio services play in emergency communication.

>
>You won't be asking Reilly anything because you won't be conducting a
>MARS net on amateur frequencies, or an amateur net on MARS
>frequencies. The reason I say that is because MARS IS NOT AMATEUR
>RADIO!

Well, PuppetBoy, too bad you didn't pay closer attention to what I said.

MARS members CAN conduct nets on Amatuer frequencies and can even discuss
thier activities thereon...

Again...GET YOUR HEAD OUT OF YOUR RECTUM, BURKE! Or at least wipe the
brown stuff off your nose before you make a public appearance.

I further suggest that before you further humiliate yourself about what
MARS is or isn't that you take some time to actually LISTEN to MARS frequencies
and then tell me exactly how much difference there is between the two.

Now, you can keep running off at the mouth if you care to, Mr. Burke, but
the ONLY person you are making a fool of here is yourself. And I might add
you're doing a spectacular job of it.

Idiot.

It's an unfortunate situation. I've worked with kids before, and have gone through the pertinent background checks. In most respects, it's no big deal.

It is getting harder to find people that will voluntarily go through such things anymore though.

Think of it. You could be a perfectly normal person, but one dumb clerical error could not only keep you from coaching your kid or being a merit badge counselor, but ruin your entire life! Its not likely to happen, but.....

It's harder to get people to help period!

And yet that is lost on so many people! Let's say we get a huge influx of new hams. Where the heck are they all going to go? What will they do? Here it is 10:30 p.m. heading toward the bottom of the present sunspot cycle, and I'm looking at 20 signals on my PSK31 setup in a 3 kHz segment. I can tune the bands on ssb and cw and by Gaw, they are busy! As much as I like contesting, I don't want the bands to sound like contest weekends all the time.

I want new hams, I want more to come along to balance out the SK's and those that lose interest. But I want good hams, not simply people that are here to provide a statistic. Anything else will be BAD for Ham radio.

Darn near lost me! Thank goodness I found a good Elmer. I was pulling
me hair out trying to put a station together.

No, Putting an adequate station together is not easy.

Nope. Just imagine all the "why should I have to learn anything people trying to do this. Perhaps they will sue the older hams for the information to get a decent station going? ;^)

Yep.

CAP instituted it's background check program over 15 years ago and it's
worked well.

> It is getting harder to find people that will voluntarily go through
>such things anymore though.

All they have to do for us is go to the local SO or PD and get the prints
done. Here in Franklin County, TN, the local SO will do it for free.

> Think of it. You could be a perfectly normal person, but one dumb
>clerical error could not only keep you from coaching your kid or being a
>merit badge counselor, but ruin your entire life! Its not likely to
>happen, but.....

My concern is what people today call "child abuse"...

We see "abuse" in the ER all the time that is nothing of the sort...It's
estranged parents arguing over who's the better parent or trying to use Junior
as a pawn in thier on-going domestic disputes...Most of the time the "charges"
are on the person who thought to bring charges second...

The BIG problem is getting that crap cleared off...Even if no actual
charges are substantiated, there's always a record of "allegations" that are
out there...The "innocent until proven guilty" thing sounds good as the
disclaimer on an episode of "COPS", but unfortunately is not necessarrily a
fact of life.

> It's harder to get people to help period!

Yep. "Everybody" wants "Somebody" to "do it", but "Nobody" has the time to
do it.

True. I put together my station for $250.00 for the rig (got real lucky
there) 14 dollars for antenna wire, 20 dollars for twinlead, 140 dollars
for antenna tuner. Already had a computer so I don't count that. So I
was right around that 350 dollar mark. If a young'un could spend the
time and effort (remembering that the parents have to spend that time
and effort too) they could get something pretty inexpensive. I suspect
most wouldn't though.

Yaknow, I think clubs might think about getting a member that works
with the kids. This would be a person willing to go through the
background checks for working with young'uns and is good with kids.

They will all get the whole thing. Unlike here, they took the same theory.
This is the most common scenario in Europe. Most of the hams in Europe are
now licenced for all the HF bands.

It used to be the case in UK many decades ago (it may have changed now) that one could simply go to an auto accessories store and buy "CD" ("Corps Diplomatique") stickers (just like the "GB" stickers for UK vehicles being driven in France). (Not as strange as it may sound: even license plates were not *issued* officially: one was allocated a registration number and could go and get the embossed plate made anywhere -- or stick plastic letters and numbers on a blank plate). The chances of a vehicle so adorned being ticketed were very slim (at least, so it was said), because the police didn't want to risk a "diplomatic incident."

The "they" is really one individual, the specialist who has to
start the ball rolling by drafting the new rules and the discussion
and justification therefor, and AFAIK the current incumbent in that
slot is an active amateur. After that, his job is to sell it up the
ladder, where ham radio is on the bottom of the totem pole, and he
may see that there is a barrier upstream of him and may be doing
nothing because of that. Were it me, I'd have the rules and the
text all ready to go in my wordprocessor files by now.

I HIGHLY doubt it's even possible. UHF is so far from 11 meters in the radio spectrum that aside from scrounging parts, one cannot simply convert a UHF x-cvr to 11 m or vise-versa.

>
This is true of *any* activity. Heck, when I was training for the
marathon 20 years ago, I met plenty of folks who said they wanted to
run a marathon - if only it wasn't 26.22 miles long...

>People in amateur astronomy also obsess about the graying of the
hobby,
>and how do we get the kids involved? Fact is, a scope that can
actually
>be used for any kind of passable observation costs a fair amount of
>money.

Is it really so much money, Mike? I've heard that there are some folks
who make their own 'scopes, down to the grinding of lenses and mirrors
and such. And of course there are used telescopes. But the telescope
itself is probably the least of the issues.

>And ohhh geee, the dufusses that wanted to get the little kids
>interested in observing seem to have forgotten that Mommy and Daddy
>don't want little Buffy or Jody (and by extension, Mommy or Daddy) to
be
>staying up all night and traveling to remote sites.....
>
Here's another issue:

If someone wants to look at the moon, planets and stars, the libraries
and bookstores are full of books with pictures that no amateur could
hope to equal. The 'net is an even more amazing resource. Look at the

pictures of Saturn coming from Cassini - this is gonna be one heck of a summer for planetary science! And no staying up late, no special equipment, no disappointments due to clouds or rain or cold. No real knowledge of things like where to point the 'scope or how to interpret what is seen, either.

Of course looking at pictures taken by others is not the same thing as seeing something directly. But for most people, it's 'close enough'.

>In ham radio, a person not only has to have the interest, they have to
>be willing and able to spend a fair amount of discretionary income on a
>rig, put up an antenna, (if they are even allowed to) and all the other

>
The biggest investments aren't monetary. It's the time and effort.

>Any wonder why lots of the new guys are the shack on the belt types?
>For kids, usually dependent upon M&D for their money, M&D are often
>happy to spend 100-200 dollars on a HT. They might not look so happily
>upon laying out $800-3000 for an hf rig, and putting up that antenna.
>All the young hams in my area are repeater people, save for Field day.

37 years ago I was one of those young hams, and got no help from the parental units. Today's kids are no different. The big difference today is that for too many folks the antenna is a really big deal. Heck, look how many *adult* hams can't figure out how to put up an effective HF antenna these days...
>
>Finally, the comparison of ham radio to the internet is amusing at

>My points are that blaming the lack of growth (which is an arguable
>thing in the first place) on the Morse code test is kind of like saying
>that a frog with no legs that can't jump when you tell it to jump, is deaf.
>

I wish I knew where that one came from!

>It is a hobby for the dedicated and relative few.

Here's a datapoint for ya:

In 1972 I graduated from a suburban Catholic boys' high school. This was in a solidly middle-class area, at a school that stressed math and science (AP courses available in those days were calculus, physics, chemistry, and history). My graduating class was over 600. IIRC exactly three of us graduates were hams. Of those three, only I am still licensed.

The girls' high school next door (literally) was slightly larger - and had no hams at all. Out of maybe 5000 kids in grades 9 through 12 there were perhaps 9 or 10 licensed hams.

The reasons for the scarcity were many. For example, many extracurricular activities competed for our time and energy. (Like this blonde 11th grader who - no, wait, wrong newsgroup...). There was no organized school activity until we kids started a radio club of our own, which rose and fell on the efforts of us kids. More than a few kids back then though amateur radio was "square" - its conservative political nature (K7UGA) and military ties made more than a few look askance.

Most of all, those were the boom times for cb. For less than the cost of a half-decent used receiver like a Drake 2B, one could head over to Lafayette Radio or one of its competitors and bring home a complete setup - 23 channel transceiver, groundplane antenna, coax, mounting hardware, etc. All brand new, ready to go. And if you had a car, a few more dollars bought a mobile mount and 102" whip antenna. License? Just fill out a form - but in fact many did not bother to do even that much. No tuneup, no fancy adjustments - just pick a channel, push the button and talk.

I don't know how many kids in my school had cbs or access to them, but they outnumbered us hams back then. Some of them became hams, most lost interest when the cb boom ended.

Things haven't changed all that much, except now it's the 'net that's a prime competitor.

>stay as a filter?
>
Not really.

No test can be a perfect filter that somehow guarantees perfect behavior by everyone who passes it. That doesn't mean we don't need testing.

Consider this plain, simple fact: All of those violators mentioned above allegedly passed *written* tests which covered the rules, regulations and operating practices. In fact most of them passed several written tests. Yet those tests have not prevented them from running afoul of the regulations. Thus, the written exams are not a "filter" either, even though they deal directly with the rules and regs.

So, should we just dump the written tests because they're not a perfect filter?

I think the most popular 2 meter repeater frequencies and simplex calling freqs should be added to new FRS/GMRS blister pack radios in WalMart with a little scrunched up application for an FCC license placed in the package just where you would put a knife thru it to open the blister pack.

> Despite supporting Code testing, I am also of the mind that once the
> majority has spoken, it's time to move on.

Which majority?

What happened at WRC-2003 was *not* the abolition of code testing.
Instead, the treaty was modified so that each country decides for
itself what its code testing requirement will be. A country can have
no code testing, some code testing, or universal code testing for an
amateur license, and still be in accordance with the treaty.

This may seem a semantic point but it's not. A sizable number of
countries insisted on the wording that was finally adopted.
>
> They could have pre-empted all this by stating something to the effect of
> "based upon recent previous commnets on the subject, we are suspending the
> requirement for Element 1 for access to HF licensure"....But nooooooooooo...

The majority of comments to 98-143 *supported* code testing. In fact,
the majority of comments to 98-143 supported *at least* 2 code test
speeds. Based on the majority of those comments, we'd still have at
least 12-13 wpm.

Look at the comments on the various petitions since July - what is the
majority saying?
>

Perhaps the view is that they regulate "communications", not
"radio"...
>
> >Secondly, I don't think they will wait for any more petitions.
>
> Sure they will! They are BUREAUCRATS! They are >>all about"<< petitions,
> applications, hearings, and the PROCESS of administering...They are poorly
> prepared to deal with the EFFECTS of thier actions!

It's not a question of waiting. It's a question of when the petitions
stop coming in. Anybody can file a petition - that's the American way.
Unless the petition is clearly "not serious" (such as several similar
petitions from the same person or group in a short period of time),
FCC *has to* deal with them. Which takes very little in the way of
resources - that's what ECFS and the FCC computer system are for.
Biggest resource drain is that somebody at FCC has to read the
petitions and comments. That's a lot less of a task than writing an
NPRM and rules revisions, and all the research connected with same.
>
> >Thirdly, I think that when the dust settles they will just do what they

> asking for the same thing and the FCC keeps thumbing thier noses at it...I
> don't understand why since the Novice license hasn't generated much interest
> since 1987

Whole bunch of reasons. One is the "nobody loses" thing - where do the
Novices and Tech Pluses go if the "Novice bands" become 'phone?

Another is the basic reason we have subbands-by-mode in the first
place. If the US phone subbands are widened, there's less room for CW
and the data modes. It amounts to rewarding the use of
spectrum-inefficient modes, and penalizing the use of
spectrum-efficient modes. And the DX 'phones will move still further
down the band to get away from the US QRM.
>

> >2) Eliminating supefluous licence classes. They will ultimately just do the

> I really doubt they will "upgrade" the Novice since it's rapidly withering
> to nothingness...The Advanced...?!?! Maybe, but a lot of the Advanced guys see
> >THIER< license as being the last readily evident class as having been
> 13WPM/Old School tested and want nothing to do with "upgrades".
>
Such thinking about the Advanced is faulty, of course. From 1990 until
2000, the Advanced was available with 5 wpm code via waivers. And
after the restructuring of 2000, someone with valid CSCEs for 5 wpm
code and the Advanced writtens could get an Advanced *without* 13 wpm.

The big questions about free upgrades are simply: What's in it for
FCC? What does it really cost them to keep 'legacy' license classes on
the books?

I think the answer to both questions is "not much!"

He's probably convinced that it's possible because he knows most CB sets
have UHF coax connectors.

It may interest some to know that the "UHF" coax connector does not mean
Ultra High Frequency. It actually comes from the US Military (and probably
NATO) designation: Universal High Frequency Coaxial Connector. In this sense
"Universal" means it is found on "practically all" military HF rigs.

References?

This sounds more like a retroactive acronym.

NATO didn't even exist when the UHF connector series
was first made.

The UHF connector was designed as a mate for RG-8 coax. It
was found on virtually all radios designed to drive RG-8
during that era. Typical examples of WWII vintage non HF
radios that used UHF connectors were the ARC-1 (120-150MHz),
SCR522(108-150MHz), BC-645 IFF (VHF/UHF) ... much later, the
UHF connector was used on the ARC-27(220-400MHz), URR-13/35(220-
400MHz), all two way base station radios in the 400-500MHz
bands...

I am inclined to go with the "they just didn't know any better"
explanation.

Of course. Also, the BNC connector was originally devised for military applications during the war because existing connectors would rust badly under field conditions. The improved BNC was called that because the Base Never Corrodes.

The SMA connector is just too small to be able to carry any reasonable power level, which is why it got that designation. SMA stands for Stops MicroAmps.

I'd tell you what the designation on the N connector stands for, but it's obscene.

The FCC sure has a handle on someone who has an FCC license and becomes a representative of a foreign country (other than an "honorary consul" which is a U S citizen handling certain business or tourism activities). They can - and will - invalidate the FCC license that s/he holds.

If s/he commits an offense such as continuing to operate as an amateur without a license from the "home" country and meeting all the requirements for alien operation in the US, the US can - and will - lodge a formal complaint with the "home" country and if nothing is done can declare the person as "persona non grata" and give him/her 48 hours to leave the country. I've seen it done to someone who held a U N passport who thought that he could get away with something because of that. It was handled very quietly without paper subject to the FOIA being passed back and forth.

Which was along the lines of my post to this a few moons back. He may have
been referring to the UHF Citizen's band - which this conversion may have
then be possible from another UHF range. BUT to take it to 26-27 MHz, I
don't think so!

Lou

You might wanna explain in more detail. Not sure Mr. Davies is
familiar with the following terms:
kielbasa
Castro Street
'complete' (in the context to which you referred).

In the interest of travel time, he could possibly achieve the same
effect in midtown Atlanta. Or Key West. Or the French Quarter.

One interesting thing, Mike

I keep hearing how the repeaters aren't useful and they go out when the power goes down. I dunno, but when we had the big blackout - almost all of the repeaters were still hummin' away ;) There are at least two repeaters that aren't even connected to the mains. One is solar powered; the other is windmill powered. Regardless, my HT through the repeaters, gives me excellent coverage from Syracuse to the East, to Pennsylvania to the South, past Buffalo to the West, and through Toronto to the North. That is pretty fair 24/7 coverage.

One exception - the 10 meter port can open up worldwide, but that doesn't count for emergency use LOL.

BTW, I also don't buy lottery tickets. That is one reason I never win ;)

73 from Rochester, NY
Jim

He knows his history.

Back in the 80s our big mid-east enemy was Iran, and Iraq was the enemy of Iran and was also at war with them.
(Starting to make sense now? Remember the hostage crisis?) Saddam Hussein was also dealing with his own civil wars and was equally brutal in dealing with his own people.

As distasteful as this sounds, back then the US supplied Iraq with weaponry, intelligence, munitions, export-banned dual-use technologies, and biological products including anthrax. This was all done under "the enemy of our enemy is our friend" philosophy.

Check out this link, it's an easy read. The photo of Reagan Envoy Rumsfeld shaking hands with Hussein is classic.

http://www.iranchamber.com/history/articles/arming_iraq.php

To see a lot more information on this topic just do a Google search for "US supplies Iraq poison technology"

That response does not surprise me a bit Alun. Based on the fact that you
do not know CW. How could you be expected to understand how much easier it
is to operate a simple CW station, that it is a phone one.

OT, so to speak.

What ever happened to the K1MAN thing? When I got re-activated several years ago, I happened across his 'casts on the air, then the Riley activities, then nothing...or at least I missed it.

Couple things gang.

The original note was likely a Troll. It wasn't a serious request for information. I don't know the 3MOJ story but there's something odd going on, flame-war, troll baiting, etc.

The use of "UHF" might be a typo, where the intent was "HF".

The other possibility is the freebanders have a different terminology from standard radio talk.

VHF and UHF in freebander, bandit CB lingo isn't 100 mhz, 500 mhz, etc. VHF and UHF are band segments just above 27 mHz and below 30 mHz. .

Our repeater system has diesel generators at each site that will
operate for over a week in the event of power failure. they hardly even
hiccup for loss of mains power!

There are at least two repeaters
> that aren't even connected to the mains. One is solar powered; the other is
> windmill powered.

Now that is cool. I've toyed around with the idea of going solar
myself. It is a great thing for a repeater tho'.

Regardless, my HT through the repeaters, gives me

> who make their own 'scopes, down to the grinding of lenses and mirrors
> and such. And of course there are used telescopes. But the telescope

> itself is probably the least of the issues.

I've made two telescopes so far. The only thing I bought was eyepieces and the eyepiece holder. While it is true that you can make one for very little money - especially when you get really lucky, like I did, and find 3 12.5 inch blanks for 15 dollars each. For most people it will cost some serious dough to get quality. Of course there is the definition of quality and serious dough!

BTW, 15 dollar 12.5 inch Pyrex blanks are the rough equivalent of finding an almost new, mint FT-1000 MV Field, loaded, for 100 dollars, so there is your luck!

But that kind of deal took patience and of course much luck. A commercial version of the larger scope I made would set you back around 3.5 to 4K dollars. And it probably wouldn't have as good a mirror.

Basic rule of thumb is department store scopes are truly junk.

The inexpensive Dobsonians (a type of alt-az mount, usually with a reflector mirror) often have passable optics, but usually need mechanical work to perform well. You can get some 6 inch variety for around 300 dollars. So if you are willing to put in the time....

Most refractors have a phenomenon called "color", in which not all wavelengths of light are focused to the same point. Drives me crazy. The better ones have what is called an APO lens, in which rare earth glasses are used to focus the light all at the same place. And yup, they cost money. I've looked through a number of 12K scopes. Lovely planet images, but not all that much light gathering power.

I'm glad I saw that sentence! Yes the images provided by Hubble are
stunning. (I'll never forgive NASA if they just let it die up there) But
some of the best times I've had on this planet are staying up all night,
observing with a few good friends, sharing our views of the skies. Even
alone, the experience is no comparison.

Ahhh, memories! Station KBM-8780 had a Lafayette HE-20C. 8 crystal
controlled channels and a tuner for the channels you didn't have
crystals for. A colinear on the roof, and having fun.

> We should test on the rules so they have no excuse

We *do* test on the rules, Alun! Every class of amateur radio license
in the USA includes rules'n'regs testing. And most hams follow the
rules. But it's not a perfect filter, as is proved by the violations.

If you mean there should be a completely separate test on rules, or that the written test should be scored in sections so that one cannot pass without knowing a significant amount of the rules'n'regs, I agree 100%. But I can guarantee you that no one-time written test will filter out 100% of rules violators.

Heck, some time back we had the case of new ham (I'll let you guess what license class) using a modified amateur transceiver to send phony distress calls on the VHF marine band. The Coast Guard had to take the calls seriously until they knew for sure they were fake. The written test didn't stop that fellow, just like the code test didn't stop the folks above. So why do we need either?

Therein lies your majority, Jim.

And let's not kid ourselves...there's been a growing number of people,
wether they commented directly to the FCC or not, that is in favor of doing
away with Code testing.

Again...I don't agree with it, but it's out there and unless there's some
epiphany at FCC, it will become the law of the land in some time, if not "due"
time. I just hope we (you, I, other Code test/use supporters) can move in some
constructive way to minimize the damage.

>> They could have pre-empted all this by stating something to the effect

>least 12-13 wpm.
>
>Look at the comments on the various petitions since July - what is the
>majority saying?

I agree. But the FCC has almost always been a left-leaning agency, and
will continue to be so. I have no doubt that they will act to lose the code
tests. Thier previous comments have already set the tone for what they plan on
doing, comments to the contrary.

> >Thirdly, I think that when the dust settles they will just do what they
> >were going to do anyway. Eliminate Element 1.
>
>Maybe. Or maybe not. If a resounding majority say they want Element 1,
>things might go differently.

I see one of four things happening.

First of all is nothing. But the FCC never does "nothing", even when it's
the best course of action in the first place.

Secondly is to completely drop Code testing for all levels of licensure.
I am hoping-against-hope that they DON'T do this, but I am afraid that it is
EXACTLY what they will do.

Third is to drop the Code test for the General and leaving in the Code
test for the Extra. This is what I hope will happen.

Lastly is creating a new, Code-free HF license between the Technician
Plus-level folks and the General. However I can't see the FCC creating a NEW
license when they just went through all the hoop-laa of paring it down to
three. If they did this, I'd give the present Code-tested Generals access to
the Advanced Class sub-bands and let the new folks have the current General
allocations, minus the WARC bands and 160 meters.

Why? Why not..?!?!

> There's been what...a half dozen petitions in the last five or six years
> asking for the same thing and the FCC keeps thumbing thier noses at it...I
> don't understand why since the Novice license hasn't generated much interest
> since 1987

Whole bunch of reasons. One is the "nobody loses" thing - where do the
Novices and Tech Pluses go if the "Novice bands" become 'phone?

The question should be "where are they now?"...Access them to the General
class non-phone bands on the same bands they have allocations on
now....3525-3750, 7025-7150, 21025 to 21200 and 28000 to 28.300.

>Another is the basic reason we have subbands-by-mode in the first
>place. If the US phone subbands are widened, there's less room for CW
>and the data modes. It amounts to rewarding the use of
>spectrum-inefficient modes, and penalizing the use of
>spectrum-efficient modes. And the DX 'phones will move still further
>down the band to get away from the US QRM.

I agree.

Let me help out with that....it's in many of Alun's posts:

N3KIP - Extra class. Issued March 10, 2004. (is that the original
date, or a renewal?)

Or G0VUK, in the UK.

Excellent Mike ...I made a 4 inch reflector yrs ago ....this fellow had slabs of glass he got for free ...we made up a cutting saw out of brass and with patience ...a drill press and some slag ....we were able to cut out blanks. Grinding and polishing were fun ...but I gave the scope away years ago. About 4 yrs ago I bought a 6 inch reflector which I have a ball with ..... when I have the time ... We are worried about BPL qrm ...funny that the same hold true re light pollution for the astronomy set.

For some folks it's not a joke, though. They really don't see why the
distance has to be 26.22 miles - after all, we'd have more marathoners

if it were shorter. Or if people were allowed to use rollerblades,
scooters, or bicycles to cover the distance. After all, running is
truly *ancient* transportation technology. As a communications
technology, (the marathon is based on ancient Greek runners, who were
primarily messengers, not athletes) running has been replaced by
methods that are faster, more error-free, less expensive...

I would imagine that one can have tremendous fun in astronomy with
less-than-state-of-the-art equipment. Just like amateur radio.
>

There ya go. Also requires skill and effort. (The glass doesn't grind
itself)
>

>
Various rig designs have different good and bad features. For example,
the wonderful K2 has really good dynamic range and very low phase
noise but its display accuracy is *only* about 20-30 Hz even if the
reference oscillator is set dead-on. This is a result of how the PLL
works. Most owners don't care but there are some hams who are not
satisfied with 20 Hz error.

> > what is seen, either.
>
> simmer, simmer, simmer......;^)

Is it not true? If all someone wants is images, no telescope is
needed. In fact, I would say the best images available *for free* on
the net are probably better than can be obtained by 99% of amateurs.
And I think you'd agree. But that's not the point, is it?

> > Of course looking at pictures taken by others is not the same thing as
> > seeing something directly. But for most people, it's 'close enough'.
>
> I'm glad I saw that sentence!

It's the same in amateur radio. Yet the point of *direct experience*
is simply something many people simply "don't get".

> Yes the images provided by Hubble are
> stunning. (I'll never forgive NASA if they just let it die up there)

It's simply a matter of $$. Or lack thereof.

> But
> some of the best times I've had on this planet are staying up all night,
> observing with a few good friends, sharing our views of the skies. Even
> alone, the experience is no comparison.

Of course.

And some of the best times I've had on this planet are staying up all
night,
working CW/Morse on a wide open amateur band, sharing QSOs with fellow
hams all over the country. Or world. There is no comparison to the
experience.

Here's another point: Seeking the direct experience is also
unpredictable in that the seeker is usually at the mercy of Nature.
You can have the best 'scope imaginable, and an excellent site, but if
the weather doesn't cooperate you're out of luck. Also, the stars and
planets don't move to a human schedule - you may have to wait months
or years to see even some of the more common objects. (Want to see
Saturn on a moonless night when it is closest to Earth? Don't hold yer
breath!)

And most professional astronomers rarely if ever actually look through
a telescope. At most they do so for calibration. Actual observations
are almost all done by various sensors and instruments. Indeed, if my
information is correct, direct observation in visible light is pretty
"old fashioned" - that stuff was all done 100+ years ago, wasn't it?

Of course, every so often an amateur will make a real discovery, such
as finding a new comet or some such. Just like amateur radio.

All depends who does the defining. For some folks, following the
directions and unpacking/setting up/getting their computer to work is
high tech. For others, assembling a custom one from boards/case/drives
and loading the software isn't.

Actually NO. Class A and B of the original Citizens Band went the way
of all old, unused assignments and were swallowed up by a considerable
number of reallocations for other radio services. Happened over two
decades ago. GMRS and FRS are relative newcomers to U.S. civil
radio.

Actually, yes..."morphed" into GMRS is EXACTLY what happened.

Read the definition of "morph", Lennie.

> disaster communications....

Welp, Steve, I had proper authorization to operate amateur radio in
Somalia.

Len is my hero because he doesn't back down from rabid dogs like you.

Cellular phones help people in emergencies every day, probably much
more often than amateur radio and certainly more often than CW in any
service.

Too bad.

> We'll wait right here while you pony up an excuse for all of that....And
> THEN tell us who's "nuts"...

No excuse offered. I'm good with where I'm at. But you're broken.
Go get fixed.

> Steve, K4YZ

All you're good for are personal attacks. You have no honor.

> >RADIO!
>
> Well, PuppetBoy, too bad you didn't pay closer attention to what I said.

For some stupid reason, I paid exacting attention to your reply.
Probably even more so than you paid.

> MARS members CAN conduct nets on Amatuer frequencies and can even discuss
> thier activities thereon...

Welp, BrokenBoy, too bad you didn't pay closer attention to what I
said.

Do you know the difference between MARS members who also happen to be
amateurs holding an amateur net on amateur frequencies, vice MARS
members holding a MARS net on amateur frequencies???

Thus, "Sorry, Hans..." is a wonderfully stupid and false statement
made by YOU.

Makes me wonder why you made it, why you won't retract it, and why
you'll defend it to the bitter end.

Maybe because you're broken?

> Again...GET YOUR HEAD OUT OF YOUR RECTUM, BURKE! Or at least wipe the
> brown stuff off your nose before you make a public appearance.

There you go with the personal attacks again.

And stay away from my rectum, nutter.

> I further suggest that before you further humiliate yourself about what
> MARS is or isn't that you take some time to actually LISTEN to MARS frequencies
> and then tell me exactly how much difference there is between the two.

You need to talk to Riley and any of the Mars Directors. Any of them.

But you won't because you'll know your on a fools mission.

They wouldn't even give the nutter the time of day.

> Now, you can keep running off at the mouth if you care to, Mr. Burke, but
> the ONLY person you are making a fool of here is yourself. And I might add
> you're doing a spectacular job of it.

Yet you're up to your eyeballs.

> You've done it again.

The deepness is of your making. Please don't attribute it to me.

> I am not "back-peddling" on anything.

Yes you are. Where is your original, "Sorry Hans..." statement? Huh?

No Amateur Radio = No MARS. You
> have yet to disprove this.

You said, with the exception of a few "AD" personnel, ALL MARS members
are hams.

You were wrong there, too.

So easy to prove you wrong.

> Otherwise, you just keep trying to dazzle us with your brilliance only to
> realize it the glare off the baldness of your ignorance.

Ther you go with the persoanal attacks again.

> Your problem, not mine.

Nope, your the one making absurdly false statements.

> >> >So, if you want vindicated for making such a wonderfully stupid
> >> >statement, you can look in the Army, Air Force, and Navy regulations,
> >> >as well as Part 97, Title 47, and give me -any- citation whatsoever

> >
> >No, it is not sufficient. Quote A Military Regulation or Title 47
> >document.
>
> Yes, it IS sufficient. Each MARS program is wholly dependent on the
> Amateur Radio Service to exist. It seems that everyone except you is aware of
> this.

No, it isn't.

> Again, ANOTHER one of your problems.

I didn't break you. You're not my problem, but I do wish you'd go get
fixed.

> Maybe I ought to copy all this stuff and send it to Mrs. Beeper. Perhaps
> she can explain it to you. Perhaps she can also explain to US why you have a
> history of pathological lying and an inate ability to get yourself into corners
> with your mouth that your bravado can't bull you out of...

But you're the one dragging out the false bravado. I think its all
you've got left at this point. You have no honor, you have no
dignity. You just keep piling one erroneous statement on top of
another, then call me names.

I take no joy in pointing this out to you. I sure wish someone else
would tell you to go get some help - maybe your pea-pod brother TAFKA
could break the news to you.

> >> >No, I don't expect Hans to be named in any regulation. That's not

> >
> >Why do you keep running away from your statement,
> >
> >" Sorry Hans, MARS >>IS<< "Amateur Radio".
>
> It's still correct.

Nope. That is your original statment.

Do you now reject it?

Do you now recognize it as stupid and false?

> No Amateur Radio = No MARS.

More backpedalling.

> >I knew you were qualified to research the DoD and Title 47 regs to
> >back up your statement, " Sorry Hans, MARS >>IS<< "Amateur Radio".
> >"
> >The only question now is when you'll post the applicable citation.
>
> No need, Brain. Again, it seems everyone knows about teh relationship
> between the MARS programs and Amateur Radio EXCEPT you.

You can lie to me, and you can lie to the others on RRAP.

But when you lie to yourself and believe your own lies? You're
broken.

> Must be kinda lonely on the outside looking in, huh...?!?!

Got lots of company. They just don't want to be attacked by a rabid
dog.

> >> >Best of luck in making me eat crow. Hope you enjoy yours.
> >>
> >> >>>I<<< don't have to "make" you do anything, Brain. >>>YOU<<<

The longer I am on the web, the more Amateurs I find that are amateur astronomers. Amazing!

Making your own refractor is way cool! I want to do this someday.

And yes, Light pollution is a real problem, and is a bit analogous to BPL.

By the way, a bit of trivia if you're interested. I'm the pappy of the Black Forest Star Party, and chaired the first two versions of the party. Beautiful dark site, and especially the first year, a pitch black night. I was being interviewed by reporters after dinner, prior to taking them on a tour of the grounds to see different telescopes set up there. The interview took quite a while, and by the time we stepped out of the pavilion and under the night sky it was completely dark. When we walked out from under the pines at the edge of the field, the impact of seeing the Milky way MOVED these jaded reporters -and at least one of them - to tears.

Ya wanna lose THAT?

Yes. a lot depends on the situation. While I have my 12.5 inch scope, I
also have a 6 inch that I made, and a small catadioptric scope that is
quite modest. But I can put the littel scope on the front seat of the
car or set up on a picnic table somewhere.

And binoculars are a great way to observe.

What I don't like is that they are citing safety concerns. I'll go on
record that I would ride the shuttle to the thing right now to work on
it. In a heartbeat.

The world doesn't belong to those that are safe.

>>But
>>some of the best times I've had on this planet are staying up all night,

> "old fashioned" - that stuff was all done 100+ years ago, wasn't it?

One evening we had a professional astronomer with us for an evening of observing. It was a lot of fun. We amateurs were locating various stars and stellar objects, and he was telling us all about them in great detail. A magic evening for both him and the rest of us, although I'm afraid I scared him half to death. I was telling everyone about the encounter I had with a huge black bear on the way to the site, with the bear crossing the dirt road in front of me, and I stopped to watch the bear, and the big guy stood up to watch me, maybe ten feet from my open passenger window. It was awsome, and everyone else was used to my quirky dealings with wild animals, but I heard him say in a quavery voice "th-th-that bear, it it wan't r-r-really anywhere n-n-near here was it? We never could get him to come out with us again. 8^(

I've posted my call from time to time. It's N3KIP. I was issued a no-code
UK licence in 1980 (callsign G8VUK, and you will find I've posted that
too), a US one in 1992, and then an Advanced and an Extra by 1993, which
was multiple guess 20wpm. I suppose it depends what you mean by knowing CW?
Certainly I don't know it at 35wpm and neither do I have any practical
experience of it, but the entire point is that I didn't _want_ to learn it
or use it.

Where?

The majority of countries who sent reps voted to change S25.5. Doesn't
matter how many people or hams a country has, each gets one vote.
That's not a majority of *people* or hams, it's a majority of
governments.

> away with Code testing.

Sure. I say they are a small but noisy *minority*. Heck, there's been
a group in existence for more than 8 years that says its sole purpose
is the elimination of code testing. Membership is absolutely free and
non-expiring, does not require a ham license or other qualifications
except agreement with the single stated goal. And yet in those 8 years
they have recruited maybe 5 or 6 thousand total members, world-wide.

Some "majority".
>
> Again...I don't agree with it, but it's out there and unless there's some
> epiphany at FCC, it will become the law of the land in some time, if not "due"
> time.

The fat lady ain't sung yet. Frankly I am amazed that after the Report
and Order for 98-143 we still have Element 1 - but we do.

> I just hope we (you, I, other Code test/use supporters) can move in
> some constructive way to minimize the damage.

Been doing that for years, Steve.
>

Tell it to the noisy minority.

> But the FCC has almost always been a left-leaning agency, and
> will continue to be so.

WHOA THERE!

FCC a "left-leaning" agency? You gotta be kidding!

Let's look at the past 20 years or so:

- FCC created VE system and public question pools. Turned over 99% of
the testing functions to unpaid volunteers to "get the government off
your back". Reduces the size of government and regulatory complexity.
Is that what "the left" usually does?

- FCC created medical waivers because a Republican president wanted to
do a King a favor.

- FCC deregulated broadcast radio ownership under a Republican
administration because it would help Business and reduce regulatory
complexity. Is that what "the left" usually does?

- FCC pushes a spectrum-polluting broadband technology under a
Republican administration because it would supposedly help Business.

Is that what "the left" usually does?

Those are just the high points. The trend is clear: Less regulation,
more "free market" ideology, little concern about pollution of a
limited natural resource. Is that what "the left" is all about, or
"the right"?

> I have no doubt that they will act to lose the code
> tests. Thier previous comments have already set the tone for what they plan
> on doing, comments to the contrary.

I disagree. If that were really the case, they could have simply
stated that based on the detailed discussion of 98-143 and their
previous Report and Order that the last remaining reason for Element 1
(the treaty) was gone and they could now simply dump it. There were
two petitions to do just that filed soon after WRC-2003. Yet we are
obviously headed for an NPRM cycle and it will probably be 2005 or
even 2006 before we know the outcome. If the FCC's mind was made up,
why the delay?
>
> > >Thirdly, I think that when the dust settles they will just do what they

>
> I see one of four things happening.
>
> First of all is nothing. But the FCC never does "nothing", even when
> it's the best course of action in the first place.

Not true. FCC has repeatedly done "nothing" in response to a proposal.
Remember when the CSVHS petitioned for some narrow-bandwidth VHF
subbands? FCC said no.
>
> Secondly is to completely drop Code testing for all levels of licensure.
> I am hoping-against-hope that they DON'T do this, but I am afraid that it is
> EXACTLY what they will do.

Maybe.
>
> Third is to drop the Code test for the General and leaving in the Code
> test for the Extra. This is what I hope will happen.

I hope they keep it for HF at the very least. I think it would be best
if Element 1 were required for all ham licenses.
>
> Lastly is creating a new, Code-free HF license between the Technician
> Plus-level folks and the General.

Why?

Why not just create a new entry-level license ("NewNovice",
"Communicator", "Basic", whatever), then close off the Tech and Tech
Plus?

Existing Novices (all 32K of them) get the new entry license via
grandfathering. Existing Techs and Pluses keep all VHF/UHF and get the
same entry level HF as the new entry-level license.

What's the problem with that scenario?

> However I can't see the FCC creating a NEW
> license when they just went through all the hoop-laa of paring it down to
> three.

Look at the ARRL petition. They essentially reinvent the Novice, same
name, new privs. Exisitng Novices get the new privs. Some version of
that can fly.

> If they did this, I'd give the present Code-tested Generals access to
> the Advanced Class sub-bands and let the new folks have the current General
> allocations, minus the WARC bands and 160 meters.

Too complex.
>
> Why? Why not..?!?!
>
> > There's been what...a half dozen petitions in the last five or six years
> > asking for the same thing and the FCC keeps thumbing thier noses at it...I
> > don't understand why since the Novice license hasn't generated much interest
> > since 1987

Because the FCC sometimes *does* do 'nothing'. That's the point.
>
> Whole bunch of reasons. One is the "nobody loses" thing - where do the
> Novices and Tech Pluses go if the "Novice bands" become 'phone?

Slide 'em down - it was done before. 80 M novice used to be 3700-3750,
40 M Novice used to be 7150-7200.

Or give them General class CW privs at 200W on 80/40/15/10. Why not?
>
> The question should be "where are they now?"...Access them to the General
> class non-phone bands on the same bands they have allocations on
> now....3525-3750, 7025-7150, 21025 to 21200 and 28000 to 28.300.

Sure. In fact give 'em WARC bands while we're at it. Why not?
>
> >Another is the basic reason we have subbands-by-mode in the first

>

> I agree.

So write and submit a petition to FCC. Everybody's doing it....

The fact is that almost anyone in decent health who is willing to do
the training can finish a marathon. But you gotta do the training,
which 99% of people in decent health won't do.

It's still all about $$. How much you think the shuttle disasters cost
in $$? And the truth is that even with all the upgrades they're an old
design that costs big money to keep alive.

One of the promises made about the shuttle was that it would save
money and be 'easily' reused. Neither has come true - it's cheaper to
launch satellites on an Ariane and the shuttles are extensively
rebuilt between flights.

> I'll go on
> record that I would ride the shuttle to the thing right now to work on
> it. In a heartbeat.

The next flight will probably be the safest because you *know* they
went over the thing with a fine tooth comb...
>
> The world doesn't belong to those that are safe.

Sure it does! The trick is understanding what safety is really all
about. Risk cannot be avoided but there's no point in being foolish.

Thanks Leo....

My comments stand. He knows nothing about CW operation. If anyone doubts
that, go to his QRZ biography and read the following ;
"100 percent phone operator".

And with a N call 1x3 that means he got his ''Extra" the easy way. Recently
no doubt. Guess even a hundred percent phone operator is capable of passing
the multiple guess 5wpm test for Extra...what a joke. I rest my case.

Sorry Alun....hadn't gotten this far down the list before I sent my latest
to you.

I'll correct things a bit. You didn't earn a extra with that test either.
It was just a bit less of a give away then the 5wpm joke now.

You still know nothing about cw.

Why do you continue to argue the point? It is obvious I am right.

The point is that I don't need to know anything about CW to respond to the statement "phone operators are lids". What does that have to do with CW?

You introduced the question of whether I know anything about CW, and I answered it, but it proves nothing.

It has nothing to do with it. I just get tired of people that put on like
they know something and don't. So lets just agree to disagree. What dif
does it make anyway?

5or 6 Thousand, yea right, since NCI refuses to provide the correct INFO, they might as well say 40 Million, since no proof is required. My guess probably more like 200 to 300 hundred.

>Where?

The majority of nations voting to drop the Code.

>The majority of countries who sent reps voted to change S25.5. Doesn't
>matter how many people or hams a country has, each gets one vote.
>That's not a majority of *people* or hams, it's a majority of
>*governments*.

True...But the tide'd been turning for a decade...More, really...

>> I just hope we (you, I, other Code test/use supporters) can move in
>> some constructive way to minimize the damage.
>
>Been doing that for years, Steve.

Yep. Mentoring new Hams...VE tests...Cutting Lennie off at the the
knees...

>> But the FCC has almost always been a left-leaning agency, and
>> will continue to be so.
>
>WHOA THERE!
>
>FCC a "left-leaning" agency? You gotta be kidding!
>
>Let's look at the past 20 years or so:
>
>- FCC created VE system and public question pools. Turned over 99% of

>the testing functions to unpaid volunteers to "get the government off
>your back". Reduces the size of government and regulatory complexity.
>Is that what "the left" usually does?

In this case, yes...

That it "reduced" the workload at FCC was incidental in my opnion, Jim.
That it markedly lowered the bar for the effectiveness of the written tests to
actaully insure some degree of technical competence was as left as you can get
without falling off the Huntington Beach pier.

>- FCC created medical waivers because a Republican president wanted to
>do a King a favor.
>
>- FCC deregulated broadcast radio ownership under a Republican
>administration because it would help Business and reduce regulatory
>complexity. Is that what "the left" usually does?

And who gained the majority of benefit from that move?

>- FCC pushes a spectrum-polluting broadband technology under a
>Republican administration because it would supposedly help Business.
>Is that what "the left" usually does?

The supposed "help" would be to those living in rural or under-served
areas, Jim. At least that's the pitch being pushed.

>Those are just the high points. The trend is clear: Less regulation,
>more "free market" ideology, little concern about pollution of a
>limited natural resource. Is that what "the left" is all about, or
>"the right"?
>

>
>> However I can't see the FCC creating a NEW
>> license when they just went through all the hoop-laa of paring it down to
>> three.
>
>Look at the ARRL petition. They essentially reinvent the Novice, same
>name, new privs. Exisitng Novices get the new privs. Some version of

>that can fly.

Like I said...I can't see the FCC creating a new (or re-opening the
old...) level of licensure...I was just offering it as an option.

>> If they did this, I'd give the present Code-tested Generals access to
>> the Advanced Class sub-bands and let the new folks have the current General
>> allocations, minus the WARC bands and 160 meters.
>
>Too complex.

Why? Techs would get VHF and above. The new "X" class would get old
General phone priv's minus WARC and 160. What's "too complex" about it....???

The Generals move up to the Advanced class allocations, and Extra's get
the new "farmed out" phone bands.

>> >Another is the basic reason we have subbands-by-mode in the first
>> >place. If the US phone subbands are widened, there's less room for CW
>> >and the data modes. It amounts to rewarding the use of
>> >spectrum-inefficient modes, and penalizing the use of
>> >spectrum-efficient modes. And the DX 'phones will move still further
>> >down the band to get away from the US QRM.
>>
>> I agree.
>
>So write and submit a petition to FCC. Everybody's doing it....

Yeah...one more glory hound seeking his fame and fortune in the "Federal
Register"... ! ! !

=)

Yes...and it's NOT a ZERO.

>> So are you.
>
>Obviously I'm a 10.

Not when it comes to honesty you aren't.

>> It really is THAT simple.
>
>Then why don't you get it???

I "get it" just fine, Brain.

You're the one with a comprehension disorder.

Sucks to be you.

>> >And so you call me a liar and an idiot, and insinuate that I'm not a
>> >man.

>>
>> You are a liar.
>
>No, I am telling the truth.

Uh huh.

> You've made assertions about things you've allegedly done
>> in Amateur Radio that you subsequently refuse to substantiate them with ANY
>> form of proof.
>
>I've done them, yet I owe you no proof.

You SAY you've done them.

I say I've operated from Okinawa Japan. I can provide copies of old logs,
and I bet if I wrote to 15th Air Force I could get a copy of my old
authorization. I can also pony up a couple folks who were there when I did it.

YOU say you operated from Somalia. You haven't supplied the callsign of
ONE contact you made...Haven't provided a copy of ANY authorization from that
operation, and can't even give us the name of your commander that allegedly
gave you the permission.

Heck...I'd be half tempted to give you the "benefit of the doubt" based ont
eh "I was following orders" ruse if you'd even provide THAT much information.

You haven't. SEVERAL folks have asked you to ante-up some facts.

No facts = Brain's a liar.

It really is THAT simple.

>> You're an idiot because you keep exposing yourself to such ridicule
>even
>> though you've been caught doing it over and over.
>
>There you go calling me names again.

It's not "calling names" if it's true, Brain.

>> I doubt you're much of a man because of your foolish regard for your

>> authorization to do so. Then you can ALSO provide us with SOME sort of
>proof
>> to substantiate YOUR claim that "unlicensed radio services play a major
>role in
>> disaster communications....
>
>Welp, Steve, I had proper authorization to operate amateur radio in
>Somalia.

Not from what you've posted here.

>Len is my hero because he doesn't back down from rabid dogs like you.

Lennie is a documented pathological liar. And just like a broken watch,
he get's one right once in a while. That still doen't make him any less of a
liar and antagonist.

If that's what you idolize, then just grit your teeth and take the flak
coming your way, PuppetBoy.

>Cellular phones help people in emergencies every day, probably much
>more often than amateur radio and certainly more often than CW in any
>service.
>
>Too bad.

No one sid it didn't.

YOU said "Unlicensed services play a MAJOR role in disaster
communications."

I've asked you to provide me ONE instance where "unlicensed (Part 95 other
than GMRS and Part 15) devices play a MAJOR role.

Again...ANOTHER assertion you've made unsubstantiated by facts.

>> We'll wait right here while you pony up an excuse for all of
>that....And
>> THEN tell us who's "nuts"...
>
>No excuse offered. I'm good with where I'm at. But you're broken.
>Go get fixed.

If you are "good with where (you're) at", then dysfunctional and mediocre
are your milestones.

Nice job.

>All you're good for are personal attacks. You have no honor.

A declaration about honor from a person who subsidises lying and
deception.

That's cute.

That's Brian Burke. Why am I not surprised...?!?!

Putz.

>They don't have MARS calls???

What an idiot.

Is your wife looking over your shoulder right now? She should be.

>There you go again with the personal attacks.

No...that was not a "personal attack"

Here's one: "You're an idiot".

Of course it's not an attack if it's true. And it is.

>> It's not "personal attacks" if it's true.
>
>Its obviously not true, so they are personal attacks.

Sure it is.

You've been given countless opportunities to dig yourself out from under
the blanket of stupidity that you've woven for yourself, but you just keep
trying to pull it up over your head a bit higher by asserting that anyone (me
in particular) is a "nutter", "broken", etc...

Everyone except YOU seems to be responsible for making the stupid
assertions you make.

How is that...?!?!

>> And I STILL doubt you have adequate authority to wipe with your
>> non-dominant hand without written permission.
>
>I bestow upon you the honor of wiping for me.

Thanks. I have JUST the thing for you...Just go RIGHT ahead and bend
over...Just ignore that the "paper" I am opneing up is in a flat pack, not a
roll.....

>> >> Subtract the participation of licensed Radio Amateurs and what do
>you
>> >> have...???

>
>So easy to prove you wrong.

So far YOU haven't disproven anything.

No Amateur Radio = No MARS.

So minus your ONE example of a civilian director (BTW..He's the Chief of
MARS...NOT a MEMBER...You should learn the difference, Brain...) and the AD
personnel that I had already cited, we still have over 98% of the participants
in MARS as licensed Amateurs.

>> Maybe I ought to copy all this stuff and send it to Mrs. Beeper.

>you've got left at this point. You have no honor, you have no
>dignity. You just keep piling one erroneous statement on top of
>another, then call me names.

No "erroneous statements", Brain.

Without LICENSED RADIO AMATEURS to fill it's ranks, there would be no MARS program.

As for "MARS >>IS<< Amateur Radio", I again refer to your lack of ability to think in the abstract.

I also suggest you take a listen to almost ANY MARS net frequency during "informal" time and tell me what's different about many of the conversations that take place there as opposed to on "Amateur" frequencies, other than different callsigns.

Lastly, as for "dignity" or "honor", I am not the one with an honesty deficit.

That's you and Lennie.

Sucks to be you...Or should I say "Sucks to be the two of you"...?!?!

Deleted the rest. It's been beaten already. As have you, Brain.

Steve, K4YZ

True enough. I don't have any interest in marathons, a combination of my physique and the abuse I've put upon my legs over the years. I'm built better for the 100 yard dash!

Side note: I had to give up Hockey temporarily to nurse a torn meniscus. At Christmas I couldn't walk down stairs, and long drives in a car were murder upon getting out. 6 weeks of rest, then followed by a daily weight lifting regimen, and it's a freakin' miracle. Pain is just gone! I can hardly wait to lay a good check on someone! 8^)

Yup. I am always impressed by a good night sky, but these folks
couldn't normally see much in the sky at all. I also primed them with my
interview, and wham! I don' know if you've ever seen pristine sky, but
like the guy in 2001 says - "My God, its FULL of stars!"

Although in Pennsylvania, the wx takes it to extremes! 8^) AS a matter
of fact, on of the big reasons I got into the ARS was because the skies
in PA were so often cloudy, I needed another hobby to give me something

to do in my spare spare time.

We really don't know what a majority of *hams* or *people* think -
just what a majority of *governments* voted for. Big difference.

> That it markedly lowered the bar for the effectiveness of the written tests to
> actaully insure some degree of technical competence was as left as you can get
> without falling off the Huntington Beach pier.

You've got it exactly backwards, Steve. The whole purpose of the VE system and published pools was to reduce the admin workload of the FCC. Get unpaid volunteers to do the work that used to be done by paid govt. employees. That's straight out of 'the right's' ideology of minimal government and privatization. And it happened during a popular Republican administration that was elected in large part to "get the government off your back".

The idea that it lowered the standards was dismissed at the time by those who wanted the new system.

>
> >- FCC created medical waivers because a Republican president wanted to
> >do a King a favor.

Can't blame that one on "the left"

> >
> >- FCC deregulated broadcast radio ownership under a Republican
> >administration because it would help Business and reduce regulatory
> >complexity. Is that what "the left" usually does?
>
> And who gained the majority of benefit from that move?

The Businesses (like Clear Channel) who were able to buy up lots more radio stations and homogenize radio broadcasting. The investors who sold the stations for big $$.

Listen to talk radio and see how many programs are on 'the left' vs. how many are on 'the right'.

>

> >- FCC pushes a spectrum-polluting broadband technology under a

> >Is that what "the left" usually does?
>
> The supposed "help" would be to those living in rural or under-served
> areas, Jim. At least that's the pitch being pushed.

That's the smokescreen that's being used to sell it. Who would really
benefit?

Most of all, the selling points are the same: Less regulation, free
market for Business, this will help The Economy, homeland security,
etc., etc.

Who appoints the Commissioners? Who personally endorsed the new
technology? WHo is seeking reelection in a few months?

Sorry, Steve, your theory of FCC as "left leaning" just doesn't hold
water. At least not for the past 20-odd years.
>
> >Those are just the high points. The trend is clear: Less regulation,

>
> Like I said...Bureaucrats. The more paperwork and the more
> administratively burdensome, the better.

Maybe. Or maybe it's just not a high priority. Or maybe the commentary
supporting code testing *has* had an effect.

In any event, if the code test *is* dropped, it will be right in line
with "the right's" agenda of less regulation and more access. That's a
plain, simple fact.

Ask any no-code-test person if their agenda is liberal or
conservative. 99% will say it's the conservative thing to do - less

regulation, "free market of modes", etc.
>

> Sorry, Brain, if you don't like being held up to the light of day.

I enjoy sunshine. It feels good.

So don't pretend or insinuate that you're "exposing" me. You're no
magician, and no matter how hard you try, people aren't buying into
your tricks.

Meanwhile, why have you been hiding from the first silly statement
that you made,

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

What frequency authorizations does MARS have in the amateur service?

What frequency authorizations does the amateur service have in MARS?

> >> I am not "back-peddling" on anything.
> >
> >Yes you are. Where is your original, "Sorry Hans..." statement? Huh?

I've disproved your statement. Isn't that what we're talking about?
Or have you veered somewhere else now?

> No Amateur Radio = No MARS.
>
> So minus your ONE example of a civilian director

And that's all it takes. ONE Example!

(BTW..He's the Chief of
> MARS...NOT a MEMBER...You should learn the difference, Brain...)

You're just fool of foolish statments, aren't you?

That is like saying that the Joint -Chiefs- of Staff aren't military
members.

and the AD
> personnel that I had already cited, we still have over 98% of the participants
> in MARS as licensed Amateurs.

First you said it was ALL of them. Then you said it was 99%. Then
you said it was over 90%. Then you said it was over 80%. Now you're
back up to over 98%.

Do you have any idea at all what you're talking about?

Moving targetsand attempts at sleight of hand just aren't working.
You're no magician, and your tricks just aren't working.

> >> Maybe I ought to copy all this stuff and send it to Mrs. Beeper.

>
> No "erroneous statements", Brain.

Not even this one?

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

You're so silly.

> Without LICENSED RADIO AMATEURS to fill it's ranks, there would be no MARS
> program.

Yes there would be.

> As for "MARS >>IS<< Amateur Radio", I again refer to your lack of ability
> to think in the abstract.

Equations are not abstract.

Steve, quit you're silly charade. Just admit that you were wrong.
All of this sand kicking just makes you look bad - like a cat trying
to cover up something stinky.

> I also suggest you take a listen to almost ANY MARS net frequency during
> "informal" time and tell me what's different about many of the conversations
> that take place there as opposed to on "Amateur" frequencies, other than

If they don't have information or traffic to pass, they should remain
silent.

> Lastly, as for "dignity" or "honor", I am not the one with an honesty
> deficit.

Huge, huge deficit. And you keep digging.

> That's you and Lennie.

Nope, like your pea-pod brother TAFKA Jim/N2EY saying, and I'm
paraphrasing,

" ~Morse Code exams are a disincentive to CW use.~ "

When I pointed out that Morse Code exams have always been a
disincentive to amateur radio, he clammed up and won't respond.

Or when he held up some OT amateurs who saved the day in WWII, but I
pointed out that we had no operating priveleges in WWII. He clammed
up and won't respond.

His silence is truly golden

Meanwhile, you just pollute R.R.A.P. with your constant "Liar, Liar,
Pants On Fire," rhetoric and indefensible statements such as, "
Sorry Hans, MARS >>IS<< "Amateur Radio". "

Good Grief!

Shouting all of the time, constantly repeating falsehoods, and making
false accusations takes no honor, gives no dignity.

Take a hint from Jim and when you get called on for making such
foolish and stupid statements, just remain silent.

You're broken. Best of luck getting yourself repaired.

> Sucks to be you...Or should I say "Sucks to be the two of you"...?!?!
>
> Deleted the rest. It's been beaten already. As have you, Brain.

" Sorry Hans, MARS >>IS<< "Amateur Radio". "

hi hi hi ;^)

I have done no such thing. I simply proved that not ALL (as in 100%)
of MARS members are amateur radio operators as you unsuccessfully
tried to assert.

Meanwhile, I'm still waiting on you to prove that MARS=AMATEUR RADIO
as you have falsely asserted.

You keep kicking sand and making personal assaults. Your time would
be better spent gathering facts.

Just back up your statement with something from Part 97 or anything
from a DoD regulation.

That is all.

Dismissed.

Most people can't.

Some weeks ago I was in Manhattan, among the canyons of the tall buildings. All anyone could see of the sky was a few patches almost directly overhead. Horizon? Folks in "the city" don't know what that means.

>I also primed them with my
> interview, and wham! I don' know if you've ever seen pristine sky, but
> like the guy in 2001 says - "My God, its FULL of stars!"

David Bowman. Full quote is "It's hollow - it goes on forever - and oh, my God, it's full of stars!"

And yes, I have seen the pristine sky. One memorable time was some years back in upstate New York, near the Montezuma Wildlife preserve. Waaaaay out in the country, no human lights for a mile or so. Wide open area, no buildings nearby, not even any big trees. Was out on a trouble call for [name of employer deleted] about 2 AM. Got out of the car and turned off the headlights to save the battery. (It was midwinter and about 15-20 below).

Clear moonless night, which is unusual for that area. Fixed the trouble and by then my eyes were very dark-adapted. You can imagine what the sky looked like, from horizon to horizon, 360 degrees all around.

When did he skirt the edge?

Remember, until the Challenger disaster, the US had never lost anyone
on an actual spaceflight. The loss of astronauts Grissom, Chaffee and
White in the Apollo 1 fire was a tremendous shock because up to that
time we had never lost an astronaut.

What most people don't realize is that most if not all of the
astronauts up to the end of the Apollo program had been test pilots,
where the losses and near-losses were far higher than in the space
program.

You should try western New York. It's not unusual to have a month of overcast. One winter we had 43 continuous days when the temperature never went above freezing and the overcast never broke. When the sun finally burned through on the 44th day, we weren't sure if it was safe to be out in it.

> "Nothing average ever stood as a monument to progress.

Not entirely true.

Look at the "average" ham HF transceiver of, say, 40 years ago. Now look at the "average" ham HF transceiver today. Not the top-of-the-line, but rather what the middle of the pack can afford. I'd say there's been some progress, particularly in what such sets cost to buy new in terms of how many hours you have to work to buy one.

Of course one of the big reasons the *average* rig is better is a trickle-down effect of techniques used on the top-of-the-line stuff. Which stuff exists in large part because of the market created by contesters and DXers.

Or look at the features, capabilities and cost of the average PC compared to 5 or 10 years ago. Heck, the average new PC today is more powerful (by a whole bunch of measures) than the top-of-the-line machine of a few years ago - and it costs far less.

So I'd say that the *average* can actually be a monument to progress.

> When
> progress is looking for a partner it doesn't turn to those who

And if Hams simply bought the "average" rigs of yesteryear in
preference to the improved ones, we'd still be getting those same
average rigs.

Gee Jim! average means just that. The newer better faster average rigs
and computers are getting their increased power or functionality FROM
the better than average machinery. No better than average machinery, no

increased capabilitied to eventually go into the average stuff.

Nahh. But this scope IS art! It is an art-deco sort of thing. Imagine a 6 foot faux granite tube in a bluish sort of color. The scope tube is attached to the bottom "rocker box" with wooden tubes that encircle the tube. The box is the traditional square shape with cutouts for the large circular 14 inch altitude bearings to sit in. Instead of the heavy rocker box that most tubes sit in, the box is lightweight, with tapering buttresses for strength. All wood parts are cherry finish. It has a combination of looking like something modern, crossed with 30's sci-fi.

Sitting on top of that little Redstone ought ot do it! Those ealy
astronauts had the nickname "Spam in a Can". My point is that if there
aren't people willing to take the risk, it won't happen

Sure. Most peole don't think anything of driving towards each other at
combined speeds of 160 mph while carring many gallons of almost
explosive fuel either. But they won't take what they consider a risk
either. Go figure!

No an N call 1x3 does not mean that he is necessarily a recent Extra. I pass my Tech with code in May of 1992 and received my original call sign (N8UZE) at that time, which I have kept. In late 1992, I passed my Extra, including 20wpm, and received my Extra class license in early 1993.

The sequentially assigned 1x3 calls beginning with N ran out in the early to mid 1990s, the exact date being dependent on the call area.

One cannot leap to conclusions based on call sign.

Dee D. Flint, N8UZE

Jim, even though he says he designs rigs and builds radios from
scratch, had to buy a kit to get a better than average CW rig.

Indeed. I got my Extra the same time as you did, Dee, although I got a no-code licence in 1980, which of course I couldn't have done if I had been in the US at the time.

It should. It helps air out your problems.

You ahve a LOT of airing out to do, Brain.

>So don't pretend or insinuate that you're "exposing" me. You're no
>magician, and no matter how hard you try, people aren't buying into
>your tricks.

I'm not "exposing" anything of yours, Brain...You do that all on your own.

>Meanwhile, why have you been hiding from the first silly statement
>that you made,
>
>" Sorry Hans, MARS >>IS<< "Amateur Radio". "
>
>What frequency authorizations does MARS have in the amateur service?
>
>What frequency authorizations does the amateur service have in MARS?

I am sure you consider it hiding.

You would. You've been getting your nose rubbed in your OWN "silly
statements" for the last several YEARS, now you think you've found something
you can latch on to.

You failed.

No Amateur Radio = No MARS.

As for the allocations, etc, it doesn't matter, Brain...No Amateur Radio =
No MARS.

>> So far YOU haven't disproven anything.
>
>I've disproved your statement. Isn't that what we're talking about?

>

>> No Amateur Radio = No MARS.
>>
>> So minus your ONE example of a civilian director
>
>And that's all it takes. ONE Example!

So, YOUR assertion is tht since there is ONE person in ALL of the MARS program, that if the licensed Amateurs in the program all quit tomorrow it wouldn't matter........

Uh huh.

Brain, if you think you've found the Holy grail, then far be it for me to let you down, but if you think holding on to that ONE example of ALL the members of MARS has found you a niche, then be happy in it.

> (BTW..He's the Chief of

>
>Moving targetsand attempts at sleight of hand just aren't working.
>You're no magician, and your tricks just aren't working.

No tricks, Brain.

No Amateur Radio = No MARS.

Are YOU saying otherwise?

Is it YOUR assertion that the MARS program will function just fine without all those licensed Amateurs?

>> No "erroneous statements", Brain.
>
>Not even this one?
>
>" Sorry Hans, MARS >>IS<< "Amateur Radio". "
>

>You're so silly.

No, not even that one.

It stands as it is. MARS exists as a direct decendant of an Amateur Radio program, and it exists today only because of the sacrifice and hard work of licensed Amatuers.

It represents the very essence of what Amateur Radio is all about.

>> Without LICENSED RADIO AMATEURS to fill it's ranks, there would be no
>MARS
>> program.
>
>Yes there would be.

You think MY statement is "silly", but then you make an utterly idiotic one.

Excuse me...ANOTHER utterly idiotic one.

Dan and Bruce can always leap to conclusions. It is what the PCTA do best.

They have an upcoming feature in the June issue of Prevenchin Magazine extolling the virtues of leaping for exercise, weight control, and proof of manhood. No sense in counting Tara Root Carbs. I understand that they also have a contract with Tiny Lytle and a new leaping machine to be featured in Saturday afternoon infomercials. It is based upon the International Geographic aborigine leaping tower, and they must tie vines to their ankles when they leap. No one is really sure the actual vine length. Oh well. Almost everyone has their fingers crossed that they don't bash in their brains when they attempt such manly heroic feats. But hey, on a $250 dare, almost anything can happen.

Now you've called me a coward and a liar. They are personal attacks
regardless of whether they're true or not, and they're not true.
You're just not a nice person.

Anyway, I know what I've done and that's enough for me. I don't need
a certificate on the wall to document my operations in foreign lands,
and as far as documention goes, even the FCC no longer requires us to
keep a log book. So much for you wanting me to do this just for me.

Get real, its for you.

Your continued insistance that I provide documention to you just isn't going to happen. You can get over it by getting over it.

So how 'bout them MARS regulations? Can you back up your statement,

" Sorry Hans, MARS >>>IS<<< "Amateur Radio". "

Best of Luck.

>going to happen. You can get over it by getting over it.

It's no skin off my nose, Brain...I am not the one who made far-out claims
that even a (pardon the pun) rank amateur in DXing could have avoided.

No Proof = Didn't happen.

>So how 'bout them MARS regulations? Can you back up your statement,
>
>" Sorry Hans, MARS >>>IS<<< "Amateur Radio". "

As long as the two are inter-dependent on each other, Brain, it's true.

As of today. it's true. No Amateur Radio = No MARS.

Amateur Radio-like conversations conducted by licensed Amateurs who happen
to be MARS members still, as I type this, occur on MARS allocations.

>Best of Luck.

For what?

Steve, K4YZ

>> Never by a punk like you, Mr. Burke. You haven't got it in you.
>>
>> Steve, K4YZ
>
>Always calling people names. There's something wrong with you.

Well...You're a punk. I see no reason to pull my punches. YOU insist on
calling me "nuts"...been doing it for several months, yet you have no degree or
training with which to validate such a proclamation. Your only "proof" is that
I constantly dog you about stupid assertions and claims YOU make.

That "Lennie is my hero" line REALLY put you out front!

So...we're even.

If you'd stop lying and hiding behind double-speak and dodging direct
questions put to you, I'd stop calling you a liar and coward, but the
likelyhood of THAT happening is, in my estimation, pretty poor.

And there we are...

Exactly my point. Those who wanted something above average (like the
contesters and DXers) drove the market.

And as a result the *average* moved up over time.
>
> > Of course one of the big reasons the *average* rig is better is a

Exactly! But it is the *improvement in the average* that can stand as
a monument to true progress.

IOW, if some tiny percentage of top-end rigs have a new technology,
that's 'progress' for the few who can afford it. But when that new
technology becomes affordable and generally used so that the *average*
rig has it, that's 'progress' for most of us.

73 de Jim, N2EY

Which is more indicative of progress:

- Somebody custom-builds a few very expensive cars with new technology
that get 100 MPG

or

- Somebody mass-produces millions of affordable cars with new
technology that raise the fleet average to 40 MPG

?

Of course the first option will probably precede the second.

73 de Jim, N2EY

Brian,

You're not paraphrasing what I wrote. You're misquoting me.
>
> When I pointed out that Morse Code exams have always been a
> disincentive to amateur radio, he clammed up and won't respond.

I don't respond to most of your posts because they're not worth my
time to read. I just don't have the time to read all the
back-and-forth between you and Steve.

I came across this one by chance and am responding.
>
> Or when he held up some OT amateurs who saved the day in WWII, but I
> pointed out that we had no operating priveleges in WWII.

Another misquote.

I posted a historic item about the use of Morse Code by our military
in WW2. Some of the operators were hams. No claim was made that they
were operating amateur radio stations. But some folks get all riled up
over *anything* positive being posted about Morse Code, even if it
happened over 60 years ago.

btw - ever hear of WERS?

> He clammed up and won't respond.

I'm responding now. You are misquoting what I wrote, probably because
you didn't understand it.
>
> His silence is truly golden

Time is money.

> scratch,

It's a fact. I've designed and built many ham rigs from scratch over
the years. Also converted surplus, fixed up old 'basketcase' rigs,
built kits, and had the occasional manufactured set (last one was a
Ten Tec Argosy, which I sold in 1984).

Plus antennas, power supplies, test equipment, shack furniture, and
lots more. My current computer at home was assembled mostly from parts
of other computers. Had to buy the modem and CD-ROM burner new,
though.

>had to buy a kit to get a better than average CW rig.

Not true. Most of my homebrew rigs have been better than average,
particularly the ones built in the past 25 years or so.

Some rrap regulars have heard my homebrew rigs on the air. You can,
too. 40 CW is about the best bet.

No bother at all, Hans. It says a lot that my little discourse
disproving one of your pet quotes would instantly disqualify me from
your group.

Funny how some folks say they value independent reasoning, new ideas,
different opinions, creativity and careful analysis - but when
actually confronted by those things, they tell the messenger he's not
wanted.

Message-ID: <Xns94E9F305373AEelektrosmdonet@130.133.1.4>
Source record: 92016

This is the latest update I could find on Google:-

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007
K5TIT: June 1, 2008

Currently, if the code test was dropped before June 15, I would be the winner, but that isn't likely as we don't even have an NPRM. The most recent NPRM took 2 years to work it's way through. If we go by that, it makes Dee the most likely winner. By then the US could be one of the last countries with a code test, as per Len's humourous piece that he posted the other day.

Alun, N3KIP

You didn't disprove the quote, Jim.

You disqualified yourself by accepting mediocrity, "good enough", and "average". My industry is too competitive to abide "average", and those who propose that "*average* can actually be a monument to progress" clearly have the wrong mindset to contribute to our success.

I disproved the first sentence of it, Hans. The part about "Nothing
average ever stood as a monument to progress".
>
> You disqualified yourself by accepting mediocrity, "good enough", and
> "average".

Those three terms mean very different things. My disproof stands. You
just don't like that fact.

> My industry is too competitive to abide "average",

Your industry "abides" it all the time. Otherwise you'd never get any
products out the door.

> and those
> who propose that "*average* can actually be a monument to progress"
> clearly have the wrong mindset to contribute to our success.

That's bad logic on your part, Hans. The proof is right in front of
you, in the PC you're using. But you refuse to see it.

We get a LOT of product out the door. Our engineering groups software
defined radio and hybrid fiber-radio (do a web search on Digivance)
products are the industry leaders precisely because they are not
"average". If we designed "average" stuff, we'd be closing the doors,
not shipping product out them.

3962. ARRL and the local scene

Newsgroup: rec.radio.amateur.policy
Date: 2004-05-16 00:26:29 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <Vyypc.1860$SZ4.967@newsread2.news.pas.earthlink.net>
Source record: 92026

The growth in numbers of Amateurs over the past decade has been overwhelmingly via the Technician license. This segment of the Amateur population does not seem highly attracted to ARRL membership, nor affiliative with the "national association" nature of ARRL.

Interestingly, however, these new Amateurs are "local joiners". They attach some importance to public service communications events such as disaster drills, SkyWarn, flood relief, marathons, parade communications, and similar functions of a local nature. Interestingly, even though their on-the-air participation is limited, they represent a significant portion of the crew at Field Day, hamfest staffs, and similar "local" events. They are also well represented on the rosters of many local clubs.

Following is a PBI (Partially Baked Idea) to favorably position ARRL (and Amateur Radio in general) with these newcomers to our hobby.

I propose that the ARRL BoD consider an initiative to attract these newcomers to an interest in ARRL by establishment of a new "Department of Community Support".

The mission of this department of ARRL would be to organize, train, support, and nurture a system of tactical communications teams on the LOCAL level. I use the term "tactical" as opposed to "emergency" intentionally to broaden the scope of the mission to include a wide variety of community-level communications needs.

This "department" would be outside the current Field Organization, and given VISIBLE and COMMITTED volunteer leadership at Director or Vice President rank.

Did I hear someone muttering "Isn't that what ARES is all about?" or "Our current field organization already provides for this." Good points -- ARRL already has some of the pieces in place, and it looks good on paper. Unfortunately these "pieces" tend to be scattered around the ARRL organization and are not linked into a cohesive program. Support and leadership responsibility, from Newington all the way down to the local level, is often a collateral duty and the attention level is spotty and often diluted by competing responsibilities and personal interests. Leadership attention at the SM level is widely variable, and SM's have a diminished mindshare of the general membership by the unfortunate H.Q. decision to remove "Section News" from the national journal of our Association. Without dwelling overlong on the shortcomings of the current situation, I think we can all agree on four points:

1) A focused national program with Director (or higher) level leadership would have more impact than the current fragmented attention to "local" Amateur Radio.

2) Such a program, if successful, would give Amateur Radio valuable credibility in the regulatory and legislative arenas, and with national organizations like Homeland Security, FEMA, and the Red Cross.

3) Such a program, if successful, would serve to elevate the perceived value of Amateur Radio with local civil authorities, perhaps softening the effects of issues like tower ordinances, etc.

4) Such a program, strongly identified with the League, would provide a membership "attractor" to those classes of Amateurs that are now only locally "affiliative". Gaining some traction into this huge reservoir of potential members would be a godsend to the health and growth of ARRL.

What would need to be done to implement such a plan. Here are some "off the top of my head" thoughts.

-- Define the mission and organizational structure.

-- Many of the people (SEC/EC's, etc) are already in place. The organization structure would need to include a short chain-of-command headed by a focused leader at Newington.

-- Move Field Day and SET into this organization as "their" events.

-- Devise a recognition vehicle to give visibility to noteworthy work by individuals and teams in this Department. This visibility (QST?) should extend outside the organization to the "general population" of hams as a recruiting tool.

-- Establish a new periodical (like NCJ for contesters and QEX for experimenters) to help build a "sense of community" among the participants.

-- Educate local civil authorities about this organization, their capabilities, and how to best interface with them to take advantage of their capabilities.

In order to build some critical mass and gain traction, the outreach effort to build these teams should not initially stress ARRL membership for "grassroots" level players, but rather depend on a strong ARRL identity to build esprit de corps and lead to an attitude of support and affiliation with the parent organization. Perhaps appointment to team leadership positions would be conditioned on ARRL membership.

Obviously a lot of this proposal needs a great deal of "fleshing out" and refinement, but I present it in the spirit of a "topic for discussion". I'm sure that the minds gathered here will not be bashful about improving my PBI.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that seven predicted dates, including my own prediction, are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
K0HB: January 1, 3000

Closest date (before or after) wins. Anyone else?

>I propose that the ARRL BoD consider an initiative to attract these
>newcomers to an interest in ARRL by establishment of a new "Department
>of Community Support".

Just what the ARRL needs...Yet another partially staffed, under-funded
program to manage.

>The mission of this department of ARRL would be to organize, train,
>support, and nurture a system of tactical communications teams on the
>LOCAL level. I use the term "tactical" as opposed to "emergency"
>intentionally to broaden the scope of the mission to include a wide

Someone/somewhere already got THAT message becasue that's exactly what
most ARES organizations (at least hee in Tennessee) do.

>1) A focused national program with Director (or higher) level leadership
>would have more impact than the current fragmented attention to "local"
>Amateur Radio.

Wait-a-minute...First you're promoting a "local" ARRL prograsm, then you go
right back and put the "leadership" as a "national" proram.

>2) Such a program, if successful, would give Amateur Radio valuable
>credibility in the regulatory and legislative arenas, and with national
>organizations like Homeland Security, FEMA, and the Red Cross.

Huh....?!?!

Again, you ae NOT paying attention to current events, Master Chief. Again,
I can only make reference to Tennessee and what I know of programs on-going in
neighboring states (I sit right against AL and GA), but loal ARES managers are
knee-deep in those exact issues.

And the LAST thing the HS folks need is yet-another alphabet soup
organization showing up purporting to represent some other sector of an already
finite subset of responders.

>3) Such a program, if successful, would serve to elevate the perceived
>value of Amateur Radio with local civil authorities, perhaps softening
>the effects of issues like tower ordinances, etc.

Local civil authorities already HAVE that "perceived value",
Hans...otherwise UHF-REACT would suffice.

>4) Such a program, strongly identified with the League, would provide a
>membership "attractor" to those classes of Amateurs that are now only
>locally "affiliative". Gaining some traction into this huge reservoir of
>potential members would be a godsend to the health and growth of ARRL.

>What would need to be done to implement such a plan. Here are some "off
>the top of my head" thoughts.

Obviously you are sincerely motivated, but are having a bit of a "Senior
Moment" in as much as you've used a lot of bandwidth to suggest things that are
already in place.

Bunch of snippage....

>Obviously a lot of this proposal needs a great deal of "fleshing out"
>and refinement, but I present it in the spirit of a "topic for
>discussion". I'm sure that the minds gathered here will not be bashful
>about improving my PBI.

What you COULD do is take the existing programs and put a bit of polish on
them and more effectively accomplish them without creating yet-another ARRL
bureaucracy, Hans.

Here's a roster of recent posters. Mostly extras. Lots of people in Pannysylvania. So now you know.

All publicly available info, with street addresses and e-mails witheld to prevent junk mail/spam etc. If you didn't give a callsign and I couldn't find it then you're not listed.

AA2QA Jim Hampton Extra Ex-WN2CJV, WB2OSP, WA3RJX , N2JH, KG6AAY
Rochester, NY
AB2OS Alan Beagley Extra Zeeland, MI
AB2RC Alex Flinsch Extra Ex-KC2IVL Mamilton, NJ
G3ZHI Ian Abel Advanced Maltby, England
K0HB Hans Brakob Extra Ex-KG6AQI, WA0PQF, WB9DLL, WB4GXH, WB0WFF
Plymouth, MN
K1KW Chuck O'Neal Extra Vanity Ex-WA1EKV Bolton, MA
K2ASP Phil Kane Extra Vanity Ex-N6SP Beaverton, OR
K2UNK Bill Sohl Extra Budd Lake, NJ
K3LT Larry Roll Extra Vanity Ex-WR2F, KA3HXE, N3CRA, DA1RZ, DA1ZW,
G0LYW Dover, DE
K4YKZ Andrew Kilpatrick Extra Vanity Ex-WZ8A, KN4YKZ, W7BZO, W1EFG
Laurel Pk, NC
K4YZ Steve Robeson Extra Vanity Ex-K4CAP, WN8OAH, WD4DEV,
KA8GRY, KC8M, KA6CM Winchester, TN
K8MN Dave Heil Extra Ex-J52US, A22MN, 5H3US, 9L1US, WB4KTR,
WN8LET Cameron, WV
K9DCI Steve Noskowicz Extra Wonder Lake, IL
KB0YZI Scott Dorsey General Cozad, NE
KB3EIA Mike Coslo Extra State College, PA
KC2ELS Jack Twilley Extra Martinez, CA
KC7GR Bruce Lane Extra Vanity Ex-WD6EOS Kent, WA
KC8EPO Leroy Klose Tech Portage, MI
KC8LDO Scott Leland Tech Madison Hts, MI
KC8PMX Ryan Lughermo Tech Midland, MI
KC9BGC Dan Jacobson Tech Lancaster, WI
KD1S Tony Pelliccio Extra Vanity Ex-KD1NR Providence, RI

Hmmm?

I wonder what you would call a person who presumes guilt until proven
innocent? America fought a war to get rid of people who think that
way.

> >You're just not a nice person.
>

Dave Heil is a rank amateur? I don't think so. But like you, even he
didn't know that a military commander can approve amateur operation in
a foreign country without a government until I pointed it out to him.
And you see a commander behind every butter bar. I guess that's how
marines are trained. You really shouldn't bring up such embarassing
accusations. You look a fool, and here you go dragging Dave into this
again.

BTW, Dave and I get along just fine as long as we don't communicate
with each other. You might try the same tactic, but then you wouldn't
have anyone to talk to. And do try to keep from sending to me
personal e-mails.

> No Proof = Didn't happen.

True? Show that it's true. Post the regulation volume and paragraph
number. Unless there is no regulation that state's,

" Sorry Hans, MARS >>>IS<<< "Amateur Radio". "

without the "Sorry, Han's" part, of course.

> As of today. it's true. No Amateur Radio = No MARS.
>
> Amateur Radio-like conversations conducted by licensed Amateurs who happen
> to be MARS members still, as I type this, occur on MARS allocations.

I listened to a Canadian amateur the other day. Sounded just like an American. But I don't make the claim that "America = Canada," based upon that observation, do I? That would be a stupid statement, and I would be foolish for making it.

You are free to make such stupid statements, however. And I am free to point out just how stupid they are and how foolish you are for making them.

Don't like it? The fix is easy and easily within your control (and you do like control, don't you?).

1. Stop saying stupid stuff.

2. If you goof and say something stupid anyway, and I point it out to you, just acknowledge that it was a stupid thing to say.

> >Best of Luck.
>
> For what?
>
> Steve, K4YZ

For digging yourself out of yet another untenable position.

Best of Luck.

BTW, how was Dayton? Camping WX was lousy.

Why no 80, 30, 20, or 12 meters? Why not allow 222 in hopes of
increasing
use of the band?

> Same phone allocations as other licensees on HF bands.

You mean same as Extras have now?

> Morse Code endorsement required for opera-
> tion in lower 100kHz of any band.

Bad idea. Acts as a disincentive to use CW and digital modes, and as
an
incentive to use voice only!

Jim, I paraphrased your statment. You stated, and the idea was, if
the CW exam is dropped for voice, and if retained for CW use, it would
act as a disincentive for CW to be used in the lower 100 KHz of any
band.

Is that correct?

> > When I pointed out that Morse Code exams have always been a
> > disincentive to amateur radio, he clammed up and won't respond.
>
> I don't respond to most of your posts because they're not worth my

I didn't quote nor did I paraphrase.

> I posted a historic item about the use of Morse Code by our military
> in WW2. Some of the operators were hams. No claim was made that they
> were operating amateur radio stations. But some folks get all riled up
> over *anything* positive being posted about Morse Code, even if it
> happened over 60 years ago.

I don't have a problem with historical fact or even Morse Code use
today. I do have a problem with inaccurately holding up soldiers as
amateurs. And the flavor of the post was about contributions that
amateur radio makes, was it not?

Do you agree with Steve that, " Sorry Hans, MARS >>>IS<<< Amateur
Radio. "

> btw - ever hear of WERS?

Is this the reciprocol of Steve's Law, where

"Sorry Hans, Amateur Radio >>>IS<<< MARS."

> > He clammed up and won't respond.
>
> I'm responding now. You are misquoting what I wrote, probably because

> I constantly dog you about stupid assertions and claims YOU make.

That's another reason why I think you're nuts. You are the one who
made a stupid assertion (Sorry Han's, MARS >>>IS<<< Amateur Radio").
I'm the one dogging you.

So, please substantiate your silly, stupid statement with a citation
from an applicable regulation.

> That "Lennie is my hero" line REALLY put you out front!

Yep, he pulls out all the stops when he rubs your nose in your silly,
stupid statments. I don't. I try to remain civil. Apparently, you

don't respect civility.

> So...we're even.

Maybe before God, or before the Law. But in very, very few other ways.

> If you'd stop lying and hiding behind double-speak and dodging direct
> questions put to you, I'd stop calling you a liar and coward, but the
> likelyhood of THAT happening is, in my estimation, pretty poor.
>
> And there we are...
>
> Steve, K4YZ

Here we are.

You've lost all credibility. No one believes, " Sorry Han's, MARS >>>IS<<< Amateur Radio". ," and you can't seem to find a citation to prove it's true.

Best of Luck.

Yep, the mentally unbalanced Wiseman is the filth-posting sociopath from along the river in Glen Dale. He picks things up by listening to 2m FM, glancing through the local paper or reading them here or on a web site. Then he manufacturers little perversities about a spouse, a parent or a child. He keeps getting booted from various ISP's and is reduced to posting his material through various anonymous remailers.

He attended one county ARES group meeting, left early out of fear and hasn't been back.

He's been turned in by at least one local for deliberate QRM on 20m, has been retested by the FCC and is in danger of losing his ticket over his character. I just keeping forwarding anything he posts about me to local law enforcement.

Dave K8MN

No, you didn't. You isquoted it, in such a way that the meaning was
changed.

>You stated, and the idea was, if
>the CW exam is dropped for voice, and if retained for CW use, it
would
>act as a disincentive for CW to be used in the lower 100 KHz of any
>band.

That's correct. *IF* such changes were made *in the future*, the test
would act as a disincentive.

Which is quite a different thing from what you wrote:

" ~Morse Code exams are a disincentive to CW use.~ "

are is present tense. *Would be* is future conditional tense. Your
misquote changes the meaning. So it's neither a quote nor a
paraphrase.
>
>Is that correct?

See above. Now you can argue the details all you want but the fact
remains your misquote does not have the same meaning.
>
>> > When I pointed out that Morse Code exams have always been a

Then why did you misquote me? Why all the fuss about the historical
item I posted?

> I do have a problem with inaccurately holding up soldiers as
>amateurs.

Where was that done?

Fact is, many WW1 and WW2-era radio operators were also amateurs. Many
were recruited specifically because they *were* radio amateurs. This
is well documented fact.

>And the flavor of the post was about contributions that
>amateur radio makes, was it not?

Look it up. You obviously have more time for newsgrouping than I.

In fact I started a new thread with that post. It was a description of
radio station WAR at a specific point in time. I didn't write it, I
just quoted it - exactly as written.
>
>Do you agree with Steve that, " Sorry Hans, MARS >>>IS<<< Amateur
>Radio. "

I have no opinion on the matter.

Brain, do you need to have a piece of paper in hand that says "If
you are abruptly slapped with the open hand across the face, it will
be markendly and acutely painful" in order to know that it's true?

No Amateur Radio = No MARS.

> > No Amateur Radio = No MARS
>
> " Sorry Han's, MARS > >>>>IS<<< Amateur Radio". ," is simply
> untrue.

No, it's not.

That you are inadequately knowledgeable of MARS programs and
policies to know otherwise is also true.

> > >> >Dismissed.

> I'm the one dogging you.

It's not stupid. Perhaps poorly worded, at least to a person such
as yourself who cannot understand the interdependence of the two.

And you're still a punk.

> So, please substantiate your silly, stupid statement with a citation
> from an applicable regulation.

Still need that peice of paper to know a slap in the facr hurts,
Brain?

> > That "Lennie is my hero" line REALLY put you out front!
>
> Yep, he pulls out all the stops when he rubs your nose in your silly,
> stupid statments. I don't. I try to remain civil. Apparently, you
> don't respect civility.

Sure I do.

And right up to the part where you started in on your usual
crapola in THIS thread, I had made it a point of very carefully typing
B r i a n.

As for Lennie...the only "stops" he usually winds up pulling out
are the ones holding him and the rest of his fecally contaminated
verbal effluent back.

That he does it to himself (and now takes you along with him) is
evident. That he was once a person of accomplishment and
responsibility now fallen on his lack of character and honesty is
pitiful.

That you voluntarilly get in step behind him is laughable at best.

> > So...we're even.
>
> Maybe before God, or before the Law. But in very, very few other
> ways.

You're right, but not for the reason I am sure YOU think...

SO FAR we are still waiting for you to back up your assertions
that "unlicensed radio services" play a "major role" in disaster
communications.

We're also waiting for you to back up your Somalia claims. You
continue to argue that "It's true because I say it's true", yet there
should be a paper trail wide enough to roller skate on to show where

your assertions are true.

And we still have your "Lennie is my hero" thing...Whew....

So you're right...it's not "even"...

> > If you'd stop lying and hiding behind double-speak and dodging direct

> prove it's true.

No one except everyone who knows enough about the current affairs
of the various MARS programs and thier dependence upon the Amateur
Radio service to make it work and sustain it.

Too bad YOU don't...Cudda saved yourself a lot of effort and
humiliation.

> Best of Luck.

None needed...You make it too easy...Again.

What guilt, Brain?

You've made assertions of fact then not backed them up.

I call a person like that a liar. You've had months and months
to prove it otherwise, yet you won't.

If you don't like the black eye you're getting, then either admit
you were making it up, or pony up some evidence to the contrary.

> > >Your continued insistance that I provide documention to you just isn't

> again.

And as of yet, you haven't even provided the name of that
"commander".

Furthermore, you wee under the auspices of the United Nations.
They ahd jurisdiction, not your LT or CPT.

As for your "commander behind every butter bar", you really need
to wake up, Brain. No such assertion was ever made.

> BTW, Dave and I get along just fine as long as we don't communicate
> with each other. You might try the same tactic, but then you wouldn't
> have anyone to talk to. And do try to keep from sending to me
> personal e-mails.

I am sure there are a LOT of people who enjoy not talking to you,
Brain...No doubt out of frustration from trying to have an INFORMED
discussion with you.

You wear ignorance and arrogance like a badge of honor. I just
don't get that.

> > No Proof = Didn't happen.

> without the "Sorry, Han's" part, of course.

Don't need to, Brain. It's a fact.

No Amateur Radio = No MARS.......Just like I don't need a piece
of paper to tell me that an abrupt application of force to the face
will hurt.

> > As of today. it's true. No Amateur Radio = No MARS.
> >
> > Amateur Radio-like conversations conducted by licensed Amateurs who happen

Sure it would be stupid.

But then it's not what we are talking about, now is it?

> You are free to make such stupid statements, however. And I am free
> to point out just how stupid they are and how foolish you are for
> making them.

That you disagree with how I worded it is fair game.

That the context is still valid isn't. No Amateur Radio = No
MARS.

> Don't like it? The fix is easy and easily within your control (and
> you do like control, don't you?).
>
> 1. Stop saying stupid stuff.

When I say something stupid, I will keep that in mind.

> 2. If you goof and say something stupid anyway, and I point it out to
> you, just acknowledge that it was a stupid thing to say.

If I say something stupid and you point it out, I will acknowledge
it. WHEN it happens, Brain...It hasn't yet.

> > >Best of Luck.
> >
> > For what?
> >
> > Steve, K4YZ
>
> For digging yourself out of yet another untenable position.

What "untenable position"...?!?!

No Amateur Radio = No MARS. It's a fact.

> Best of Luck.
>
> BTW, how was Dayton? Camping WX was lousy.

Wouldn't know...Today (May 16th) was the fifth anniversary of my
daughter's passing, and my wife insisted I stay close to home. But no
matter where I go, there she is...She may ahve left my arms, but
she'll never leave my heart.

Yep, the mentally unbalanced Wiseman is the filth-posting sociopath from
along the river in Glen Dale. He picks things up by listening to 2m FM,
glancing through the local paper or reading them here or on a web site.
Then he manufacturers little perversities about a spouse, a parent or a
child. He keeps getting booted from various ISP's and is reduced to
posting his material through various anonymous remailers.

He attended one county ARES group meeting, left early out of fear and
hasn't been back.

He's been turned in by at least one local for deliberate QRM on 20m, has
been retested by the FCC and is in danger of losing his ticket over his
character. I just keeping forwarding anything he posts about me to
local law enforcement.

Dave K8MN

..

I'm surprised nobody's slapped the snot out of him yet. Sounds like he richly deserves same.

Tim

3990. Who IS Roger Wiseman And Why Is He Angry?

Hans your heart and head are clearly in several right directions.
Whilst, of course, some of it is utter nonsense too. No surprise there
eh?

I'm not a clubbie, I haven't been able to raise any interest in that
whole scene since my Novice days back in the stone age. However I do
know a bunch of 'em peripherally mostly via the machines and via
holding down a few CW seats during their Field Day operations, some
socializing here and there, etc. In a nutshell many if not a majority
of those in this group have no interest in highly-organized activities
and/or don't care enough about any of it to even cough up the forty
bucks a year for a subscription to QST. Methinks you'd have a very
hard sell on your hands with your proposal.

In article <40A7DB19.91118D30@earthlink.net>
Dave Heil <k8mn@earthlink.net> whined:
>
> Yep, the mentally unbalanced Wiseman is the filth-posting sociopath from
> along the river in Glen Dale. He picks things up by listening to 2m FM,
> glancing through the local paper or reading them here or on a web site.

While fatass high-el just pulls thing out of his fat ass. Since when is
Roger's street "by the river' you moron? I'd say the river was at least
a mile away.

> Then he manufacturers little perversities about a spouse, a parent or a
> child. He keeps getting booted from various ISP's and is reduced to
> posting his material through various anonymous remailers.

translation: 'Whaaaaaaaaaaaaahh!'

Hey, did you enjoy putting that child molesting daddy of yours in the
ground in march?

> He attended one county ARES group meeting, left early out of fear and
> hasn't been back.

You're lying. Ray gave you both the tour of that building when the
meeting was over, you fatass slob. And, you kept whining at Roger all
through the meeting. You didn't dare actually *do* anything but whine,
did you? I suppose you should've been embarassed by your wrinkled
clothes and that cheap cologne that covered up the fact you didn't take
a shower, but you are too stupid.

> He's been turned in by at least one local for deliberate QRM on 20m, has

yeah, old fatassed bertie, your gay lover. you know, he didn't even know
the capacity of his hard drive, when asked about it he started to
describe it's outside physical demensions. his fatass looked like a big
bubble as he waddled past and out the door of the computer store.

> been retested by the FCC

too bad they didn't give any reason, did they imbecile? anybody who got
their license under he VE system can be retested at any time, you
stammering, bad-comb over wearing, overweight slob.
davey's about 300 pounds over 6 foot and his fat stomach hangs over his
cheap wrinkled clothes.

> and is in danger of losing his ticket over his character.

And davey lives in his own little world. they all wear jack boots and swastikas and say sieg heil.

> I just keeping forwarding anything he posts about me to local law enforcement.

bwhahahahahahahahahahaha...to that corrupt local law enforcement, you mean.

The way the FCC has talked about code lately, I doubt that they'd keep
it for
extra only vs just dumping it entirely. "Reduction of burden on the
VE's giving
the tests" and all that. Keeping it for extra means that VEs have to
keep and
maintain code test tapes.

I'm surprised that Luis showed up in Google, as I think he went SK in
about 1970.

Luis was the grand old Ham of Guam. He commissioned the TransPac cable
head at Orote (when it was telegraphy without repeaters) and was the
chief operator there under German, US, JA, and again US administration .
His first amateur license (OM6xx-something) was issued by the Germans
when they held the island, and in WW-II he was instrumental (via
clandestine radio) in helping the USN stage amphibious landings to root
out the JA's. A Navy dump huck RM1 (George Tweed -- "No Man is an
Island") who missed the last boat before the occupation because he was
laid up drink got a lot of undeserved credit for Luis' work in that,
because the Navy needed a hero and Luis was just native Chamorran who
wouldn't have played well in a war-bond drive.

> affiliative with the "national association" nature of ARRL.

Therein lies the whole problem. Somewhere along the line Technicians were left out of the mix. ARRL has tried some things. When I got my Technician's license in '99, I received a nice introductory letter and even a little magazine supplement with a project or two in it. But I think even that is more oriented to Hams like myself, that intend to go on in the hobby beyond Technician.

I agree with you that many of the Tech's help with the public service. Many of the volunteers that help in events that I work are Technicians.

Rather than a "department", I would suggest that ARRL might have some articles that relate to these folk.

I suppose that will P**s off some hams, but that's okay, they were already that way.

I think the problem as you not it is a big part of ARRL wanting to give the Tech's a free General license. I think they figure if the give 'm HF access, they might join up.

Bad way to do it.....

If its so obvious to "everyone," then anyone should be able to post
the citation.

But they aren't.

> Too bad YOU don't...Cudda saved yourself a lot of effort and
> humiliation.

I haven't felt the slightest humiliation. How are you coming with
that citation? How are all of you backers coming with any citation at
all?

> > Best of Luck.
>
> None needed...You make it too easy...Again.

Easy? I see no citation.

Best of Luck.

So a Morse Exam can only be a disincentive if it's in the future, even
though many, many, many amateurs have posted here that it has been a
disincentive in the past, and is currently a disincentive.

And only you can say what is a disincentive in the amateur world, and
all other opinions are wrong?

> >> > When I pointed out that Morse Code exams have always been a

> >
> >Is this the reciprocol of Steve's Law, where
> >
> >"Sorry Hans, Amateur Radio >>>IS<<< MARS."
>
> You don't know what WERS was, then.

The article didn't say anything about -amateur- transmissions being
allowed. There were also community civil defense type radio
transmissions authorized, and amateurs were often the operators of
such community stations, but not in an amateur capacity.

Silencing of the transmitters is also a well documented fact.

I think we put out about equal time, despite your claim that you don't
read my posts.

Cool.

You're a funny guy.

The article didn't say anything about -amateur- transmissions being
allowed. There were also community civil defense type radio
transmissions authorized, and amateurs were often the operators of
such community stations, but not in an amateur capacity.

Ditto here. A couple months ago I looked up his phone number and
called him. Got his answering machine, told him I was concerned,
please call or e-mail me, and left my number. Nothing heard yet.

But without the extraordinary, that progress is not made.

I understand your argument, but to me it is backwards.
